Demand-Some Peinters EXCHANGE. For the Apiary. CO.

In an article on beekeeping, The ondon (Eng.) Express says:

We are in sight of a boom in honey. ces will begin to advance this seaand in 1911, and for several years o follow, honey—and beeswax, too— will show such a sharp rise that bee-teepers will reap veritable golden har-

for the man who conducts been on the lines of modern scien seping on the lines of modern scientific bee-culture—the man who underlands the ways of the bee, operates ith modern appliances, harmonizes arm and garden planting with apiculare, and takes all reasonable precauons against animal, insect, and fundamental applications and the manufacture of the property of the section of tions against animal, insect, and fungoid enemies of the bees. The man, however, who takes up bee-keeping "just as a hobby, you know," or because he thinks that he can master the art of profitable bee-keeping by reading a shilling book on the subject, is bound to run up against all kinds of unforeseen difficulties and finish up with bitter disappointment, wishing that he had left bees alone.

Again, apjculture is the most profiting that he had left bees alone.

Again, apiculture is the most profitable rural industry. The bees find their own food, and only ask that you will give them some nourishment in the place of the honey of which you robbed them, and provide living accomdation for their surplus population In other words, you must attend to them now and then in the summer to remove the honey, hive them when they swarm (and so get another

brood." If you do this, they will pay you for your trouble.

The output of honey depends upon the numerical strength of the colony, and upon the management of the beckeper. From 40 lbs. to 50 lbs. of honey per hive is an average take, and the ghest record—well authenticated— llongs to a California beekeeper, who ok from one single hive 700 lbs. of

outh American Republics and Cuba, here is an enormously increasing de-clency in the world's supply of honey

First of all, the habit of eating honey n the place of jams is spreading thru-but the world, because of its high sutritive and wholesome nature. Medidine is using enormous quantities as a demulcent and flavoring agent; but, above all, experience has proved that cakes. Piscuits, and sweetmeats made with honey keep far hetter than those

In the wax market conditions are even still more promising for the bee-keeper. In ancient times the use of wax was limited to the coating of writing tablets and to the modeling figures. But to-day we have found hundred uses for beeswax, and are

Farm Notes. Pure-bred seed goes hand and hand with pure-bred stock and is every bit

The most prominent "catch crop" ust now is to catch up with the weeds.

Excessive hard labor on the farm must certainly be due to rank manage-ment and an effort on the part of the farmer to accomplish everything by brawn alone and not use brain at all. There is no reason on earth why a day's work on the farm should not be about the same as it is anywhere else. Industry is not the only thing that is necessary on the farm—if it were, a know of several men who have failed that would have succeeded.

Keeping everlastingly at a thing does

not always bring success, in spite of the trite saying that it does. The more persistently some people labor the worse off they become, simply because they are not expending their energies in the correct way, and along the most profitable line.

Toronto Live Stock. The railways reported 32 carloads at the City Market on Wednesday.

Trade steady at Tuesday's quotations in all the different classes.

Do You Suffer From Headaches?

There are few people who have never experienced a headache from one cause or snother. It effects all ages and both sexes alike, but the female sex is naturally the more effected through the higher nervous development. vous development and more delicate organization of the system. Those also of a nervous temperament and studious or sedentary occupation are subject to it. The presence of headache nearly always us that there is another disease which, although we may not be aware of and perhaps awaiting an opportunity to

SALT IS ESSENTIAL TO

tion to That Centained in Ordinary Feed.

Owners of live stock cannot go wrong when they place salt where it can be conveniently got at by the animals. Salt should enter at all times into the food of the dairy cow, and it should be kept where she can partake of it ad libitum. Both the quantity and quality of milk are considerably

chicago ca. lots 10-day: Wheat, 14; 24. Chicago ca. lots 10-day: Wheat, 14; 25. Collingwood or Midiand; kiln-dried, 89c. 169, 42. Chicago ca. lots 10-day: Wheat, 14; 25. Collingwood or Midiand; kiln-dried, 89c. 169, 42. Chicago ca. lots 10-day: Wheat 10-day were consistent of meaning than at other times, and the cows that sivery widely distributed in both the animal and vegetable kingdoms, and being a normal constituent of nearly ali animal organs, and fluids, undoubtedly plays an important role in the process of nutrition. Such being the case, it is essential that an adequate amount of salt be obtained either in the food consumed, and water drum, or as a direct addition to the ration. The food and water always contain some salt, but the amount varies widely in different localities, and is rarely sufficient to satisfy the desires of an animal, so that more will not be taken if offered. When allowed free access to salt, cattle will consume from one to eight ounces daily—the last amount is, however rarely reached, and the average amount would probably fall average amount would prob

or to when there ounces. In general, it has been observed that cattle having free access to salt have a better appetite, and are less affected by changes in the ration than those receiving no salt except that contained in the food. It is claimed that milch cows require more salt than other cattle, and that if it is withdrawn there will be in in the yield and in the quality of milk.

The trials that have been carried out agree in the following particulars. Cows having been deprived of salt from the contained in the quality of milk.

The trials that have been carried out agree in the following particulars. Cows having been deprived of salt from the contained in the quality of milk.

Wheat, red, hugh

Oats—Three hundred bushels sold at 38c.

Oats—Three hundred bushels sold at 43c.

Oats—Three hundred bushels sold at 38c.

Oats—Three hundred bushels colony), see that they have sufficient food during the winter, and protect them against their enemies, mice, wasps, the wax-moth, the blue-tit, The trials that have been carried out agree in the following particulars. Cows having been deprived of salt for two or three weeks exhibited an abnormal appetite for it, but the health of the animal did not seem to suffer for a far longer period. This period of immunity varied with individual cows from less than one month to more than one year. In every case there was finally reached a condition of low vitality, in which a sudden and complete breakdown occurred from

and wax. The huge world's production of 300,000 tons of honey per annum falls short of the demand by thouwhich recovery was rapid if salt was supplied. The breakdown was most-likely to occur at calving, or immediweakened and the flow of milk large. In general, the cows giving the largest amount of milk were the first to show sign of distress. It seems pro-bable that a dry cow or a steer would suffer no great inconvenience if given no salt except that contained in the

ration. The uniform results obtained from the cows in the trials I am quoting indicate beyond question that salt in addition to that contained in the made with sugar, and popular taste has decided that they are "much nicfood is absolutely essential to the con-tinued health of a dairy cow while producing milk. It is evident, more-over, that the amount of salt which over, that the amount of sait which must be supplied directly will vary greatly in different localities, it being more at high elevations and at places remote from the sea.

horse loads of ore from the Milleret District Around Metagami River Reported to Have Enormous Deposits.

on the Metagami River, 60 miles north of Cochrane, it was reported yesterday that an official of the Timiskaming and Northern Ontario Railway Commission had left North Bay to look into the prospects and stake a claim to four square miles for the commission. It has been an open secret for some time that there were good indications of coal being found in northern Ontawere made to travel as fast as possible, and there was much cheering as they reached the other side. A team which turned out from the beaten were sufficiently rich to justify any inrush of capital or men into the minush of capital or men into t track two days ago went thru the ice, and in some places it will not bear pedestrians.

To-day a chinook has been blowing and the snow has nearly all disappeared from around the town. The roads, which have been almost impassable for two days, are now like small rivers, and the mails will be taken out on, horseback after to-day.

The spot where the valuable find is said to have been made is situated about 32 miles from where the T. and N. O. Railway touches Cochrane, in a westerly and northern direction. The iscovery was made on the banks of known to abound in mineral wealth

It was impossible to obtain any definite information regarding the rumore at the T. and N. O. Railway Commission offices, Mr. Englehart, the chairman, stating that he had received nothing authentic concerning the re-

ported finds.
"We have known for some time that there was coal in the river valleys running into James Bay," said Mr T. W. Gibson, the deputy minister "In 1903 an expedition was sent out by the government to report on the out-croppings in that section, but there was no evidence of coal in much quan-tity. So far there has been no outhen-ticated statement as to the discover-ies of either bituminous or anthracity coal in the north" coal in the north."

It appears that geologists are divided as to the possibility of there being coal in this part of the province, some claiming that with the formation there there is no possibility of coal, others that the formation in certain spots is

WILL SEND EXPERT

Government Takes Steps to Verify Reports of Coal in New Ontario.

Hon. Frank Cochrane, minister of lands, forests and mines, while he is inclined to take a conservative view of the reports of coal discoveries in New Corterio, has decided, in view of the Ontario, has decided, in view of the importance of the matter to the province, to send an expert to make investigations.

It is not news to the department that coal exists in the valleys running into James Bay. As a result of the statements of geologists and explorers, government expedition was formed some years ago, under the leadership of Dr. James Mackintosh Bell, to examine the district.

of lignite on the Missanabie, Missow-eska, Opazatika, Kuataboaagan and On the Abitibi, in particular, the

quality of the ignite was reported as being excellent, but the quantity un-So far as the department is aware. no authenticated statements have been received as to the existence of bituminous or anthracite coal.

New Teachers Recommended. T. S. Duncan, M.A., of Queen's University, has been recommended by Senior Principal L. E. Embree as an occasional teacher in Malvern avenue high school for the spring months at Miss Florence Jewell is recommended by the public school inspectors as teacher at the Island school.
