	clean, compact appearance in its immediate outcrop. The section of the seam of coal was ar follows:	John Armstrong & Co.	MANCHESTER HOUSE,
	Top Coal, (very good for roof)	ARE NOW OFFERING THE	52 Prince William Street.
	13 6 This may be considered a very valuable seam of coal. The quality of the coal is exceedingly	and the second se	FAIRALL & SMITH
	This may be considered a very valuable seam of coal. The quality of the coal is exceedingly good. It may be described as a bituminous coal, but of dense and strong structure. About 45 yards below the main seam we proved (by sinking a small shaft) another seam of about 3 feet thick, of good workable coal, having the same dip and angle as the main seam. At a probable depth of 150 yards there appears to be a third seam of good coal, about 2 feet thick. This has been partially worked, and proved to be very good, considering it was near the	CHEAPEST LOT OF	HAVE JUST RECEIVED
	At a provision depth of the worked, and proved to be very good, considering it was near the thick. This has been partially worked, and proved to be very good, considering it was near the bassit. 	thick. This has been partially which, and suitable fuel for smelting the ironnot con- The main seam of coal at Springhill will afford suitable fuel for smelting the ironnot con- taining an excess of ash, and free from suphur. The physical characteristics of the coal are, its cubical, clean fracture, freedom from "bat" and dirt, often associated in the seam, and a density and strength of structure which suits either for coking, or, we think, for use raw in the blast furnace.		IN VARIOUS WIDTHS AND PATTERNS, At Forty-Five Cents per Square Yard.
	Extracts from Report, in 1869, of the late Mr. Ed. Hartley, F. G. S., of the Canadian Geological Survey.	TWEEDS	may 22 FAIRALL & AMITH.
MANUFACTURER OF BRUSHES	The samples of coal examined were taken from the main seam of the Springhill coal field An examination of the external character of this coal shows it to be a bituminous coal of a moderately compact texture, and not inclined to f. It to pieces, or slack. Four samples were taken for analysis. I, and II, were two averages of the whole box: III, was a picked samplejof thi best (most compact) coal; and IV was a specimen of the enal showing a shaly texture. The re- sults of proximate analysis in the laboratory were as follows:-		STEAM SHOE FACTORY
	moderately compact to the two averages of the whole box: III. was a picked samples of the for analysis. I. and II. were two averages of the whole box: III. was a picked samples of the best (most compact) coal; and IV was a specinen of the end showing a shaly texture. The re- sults of proximate analysis in the laboratory were as follows:-	For Men's and Boys's Suits,
