

The remarkable growth in popularity of metal for building purposes is well illustrated by the new catalogue of 150 pages just published by the Metallic Roofing Co. of Canada, Toronto. This catalogue, which is handsomely printed and substantially bound, illustrates and describes metal ceilings, friezes, caps, mouldings, ridge and hip cups, steel clapboards, corrugated iron siding,

curved corrugated iron for fireproof ceilings and awnings, fireproof metal covered doors and shutters, metal lath and so forth, ad infinitum. In the introductory chapter the company state that they were the pioneers in this line of manufacture, having started sixteen years ago by manufacturing only one line of metal shingles.

SHALLOW LAKE, ONT., May 29th, 1900.

MESSRS. THE JAMES SMART MFG. CO., Brockville, Ont.

DEAR SIRS,—Acknowledging your favor of the 16th inst., I am pleased to say that I have had the greatest satisfaction with the No. 24 "KELSEY" which your agent, Mr. Webster, installed in my house last summer. The house (two stories 42 x 52 feet) is built on a small island in Shallow Lake, and is in a very exposed position, still the "KELSEY" heated same perfectly last winter, during the coldest weather, with a minimum fuel consumption; in fact during the entire winter, practically, the check damper in smoke pipe was open. My former house, which was burned a year ago, was heated by a hot water system, and although it gave fairly good results, I have no hesitation in giving the preference, even at the same cost, to the "Kelsey." I have had experience with other hot air furnaces, which were far from satisfactory, and would not place such furnaces in my use for ten times the cost. To sum up, the "KELSEY" gives me at a moderate cost, the maximum of comfort, and I would not exchange it for any heating and ventilating system I know of. It will not fail to meet your utmost expectations.

Very truly yours,  
R. P. BUTCHART.
