APRIL.—For the repair of lands "run out" and almost valueless, there is one resource not much resorted to. But it would pay, and is not that the grave question of to-day? We have often recommended subsoil ploughing, but experiment has shown that subsoils for several feet lower than the plough can reach, may be thrown up. They are as likely as upper soils to possess the elements of fertility, and have not suffered from over cropping. Let these heaps of subsoil be exposed to the action of the elements for a year or two. The sun, air, frost and rains will do their work honestly. Let the farmer do his part, and by spreading this earth manure over his fields, he will be rewarded by reaping plentifully.
