

is being extended to all girls entering the 'teen age.

Club Briefs

A Saskatchewan Women's Section, of which Miss Maud Spence is secretary, held a joint meeting some time ago with the Grain Growers' Association. The president of the association gave a splendid address on co-operation while the president of the Women's Section gave a paper on "What woman of the world are doing today." Occasional meetings together are good for all concerned. Let The Guide hear about them.

A number of our clubs are forgetting to send their reports to The Grain Growers' Guide. Remember we want to publish what you are doing in your corner of the world so that others may read and do likewise. If you have not already done so send us a report of what you have done since the annual convention, and particularly what subjects you have discussed at your meetings.

Many club secretaries write to us for suggestions for a yearly or half-yearly program. If every secretary will send us a copy of her club's planned program, either a good one of the past or the one for the present year, The Guide will be glad to compile them into a booklet of suggested programs which will be useful to all club workers.

The Webb Homemakers welcomed three new members into their club at the July meeting. They decided to buy five dozen cups and saucers for the club's social functions. Letters were read from friends in France, and it was decided to have a shower of articles at the next meeting to be sent to refugees. Miss May, of the University Extension Staff, is to be invited to give a dress-making and millinery demonstration one week during July. Mrs. C. H. Johnston gave some hints on the making of lemonade. The reports of the delegates to the annual convention in Saskatoon were read and much enjoyed. The club feels specially honored in having its president, Mrs. Thiernan, elected vice-president of the provincial advisory board.

The Kenney W.S.G.G.A. sent in to the Central office \$20 for the Red Cross Funds.

A Women's Section is a great thing in making community machinery run smoothly. Cypress River has a very thriving section with Mrs. Code as president. During the recent campaign when the speakers arrived at Cypress River, they were met by a reception committee, escorted to the hotel, and generally looked after in the kindest manner. There was no need to worry and wonder if the meetings had been advertised, or whether there had been a hall secured for the meeting. The smallest detail had been planned and no meeting was held which was in every way so satisfactory to the speakers as that of Cypress River. We think the Women's Section had a good deal to do with the arrangements.

"I believe the work in our district to be very promising for the future. What we need in our district is a closer relationship between the organized locals and women's section, and also between the secretaries of our clubs and their director."—Mrs. Ida McNeal, at annual convention.—Unfortunately this is true in more places than one. Give your fullest co-operation to the district organization and to the provincial organization.

Glennade U.F.W.A. held a picnic on June 29 at which the members sold tags and had a fish pond for children, the proceeds of which were devoted to patriotic purposes. The results were very satisfactory, although the picnic was not so well attended as picnics in other years have been. Two new members have been enrolled recently.

A meeting of the Maple U.F.W. was held on June 18, but owing to it being Chautauque week, it was not well attended. The usual business was gone through however, and arrangements are being made to organize a Young People's Club. The members send best wishes to all the other clubs.

How the Right Oil Maintains Full Power

YOU know that a Gas Engine's power depends largely on full compression being maintained in the cylinders. If compression is poor in one or more cylinders, the motor runs unevenly and even misses fire.

Poor compression results in leakage of the gases past the piston rings on the power stroke of your engine, diminishing the force of each explosion in the combustion chamber; with a marked curtailment in the power and speed of which the engine may be capable.

Poor compression is frequently the result of scored cylinder walls and broken or worn piston rings caused by friction wear being allowed to go unchecked. The most common cause of poor compression is the use of incorrect oil. You may use a high quality lubricant, one suitable for lubricating certain classes of machinery but wholly unsuitable for the lubrication of high-powered internal combustion engines.

Maintaining a Piston Ring Seal

To obtain proper compression and full power from your engine the oil must not only be high in

quality but it must be the right oil for the purpose. It must withstand heat and wear and maintain a perfect piston ring seal to give you full compression and power.

Polarine
FRICTION REDUCING MOTOR OIL

Polarine or Polarine Heavy will give your motor that perfect piston ring seal—will keep all the vaporized gas above the piston ready to give the full power stroke to each piston. Because

Polarine and Polarine Heavy have proven their ability to lubricate every motor part, they are the most widely used motor lubricants.

Expert "Imperial Service" Free

When you decide to use Polarine or Polarine Heavy we are vitally interested in seeing that you get the grade best suited to your engine's lubricating requirements. Put it up to us. Send a full description of your engine. You'll be glad that you got our expert assistance.

Polarine and Polarine Heavy are sold in steel barrels and half-barrels, and in one-half, one and four gallon cans. Buy in the larger sizes for economy but always keep a four gallon can on your tractor.

Write us at Room 704, Imperial Oil Building, Toronto, for interesting Polarine Booklet.
