The froth produced on the bottle of the blackest ink is white, and would be perfectly so were it not tinged to a certain extent by particles of the liquid, which the bubbles hold in mechanical suspension.

As to the cause of this whiteness, it is efficient to say that it is due to the large number of reflectings surfaces formed by the foam, for it is these surfaces which, by reflecting the light, produced upon our eyes the impression of white. If we remember that all hodies
