

## Newfoundland Become Utopia?

MR. FREEMAN IS OPTIMISTIC.

The Evening Telegram.  
Mr. Freeman—I wish to make a few remarks on the projected scheme to develop a portion of our great water power which I understand is to be called The Hydro-Electric Project. The project is to be developed near the Upper Humber River which flows into Deer Lake and Bay of Islands. As this project is to come up for consideration before our Legislature in the near future, it is of course a short time before our Legislature will have to decide whether or not to give certain guarantees on the order of about \$20,000,000.00 to the promoters of the project. I wish to say that the promoters of the project are well known to the people of this country and that men thoroughly conversant with the construction and management of such a colossal enterprise have been employed. The granting of the concessions is serious business and the future possibilities of our Island are wealth, inasmuch as they involve an enormous outlay to start with, and the other hand under expert management they are only a drop in the bucket when compared with the enormous possibilities behind them.

With regard to the quantity of timber and pulp wood around the shores of Deer Lake, a portion of which is estimated at 10,500,000 cords giving an annual consumption of 220,000 cords a term of 50 years, without re-plantation there is very little doubt that the devastation by forest fires of the mills running short of wood as our forests will renew their growth every forty years. However, as the promoters of the project are well known to the public, it is only a side issue of this gigantic enterprise, which includes the smelting and manufacturing of Aluminum and other metals, as Copper, Zinc, and possibly Ores as millions of the latter are found in Bay St. George, every concession should be given to the enterprise particularly now in its early stages. The mistakes made by our forefathers and the failures in enterprises which the public were interested in, are past and many, such as the building of our narrow gauge railroad, sooner or later (if our country is to exist) must be scrapped for standard gauge, also the building of a Dry Dock half way down the St. John's Harbor.

With regard to the shipping facilities at Bay of Islands my attention was called a few days ago to an item in the "Western Star" saying that a ship is to be built at the north side of Deer Lake to connect the proposed wharf with the pier at Bay of Islands. In this respect it is to be hoped that the promoters of this huge enterprise have vision enough to utilize the waters of the Humber River between Lake and Bay of Islands by building a couple of Locks so as to allow ocean steamers to come into the Bay of Deer Lake which Lake is about ten feet above tide water. Bay of Islands. This suggestion is a very reasonable one and may be looked upon as the hallucinated dream of the promoters, but if carried out to a sufficient extent to allow ocean steamers to come up to the works whereby cargo can be taken from the great West Coast of America could be manufactured here and millions of tons of flour and shipped to England and America in addition to supplying our own country, which is about 100,000 barrels per day. Then again they easily in reach of the great Cotton fields of the South where cargoes could be brought here and shipped to the flour, etc. Several industries such as Sugar Refining could be started and manufacturing carried on much cheaper than any other part of the Continent of America, that is, if the state put forward by the Promoters regard to water power are carried out there should be no reason, but from the quantities of water power behind the scheme and otherwise.

Mr. Austin Bates in "Four Years" says "Popular prejudice against promoters as pirates where would we be without them? Where progress has been made has been risk, speculation, and the world has been developed by greed of gain." William Hearst says, "Let us consider that operates for evil, and let us go forward and not back; let us organize, since the faculty of organization is the measure of intelligence." The co-operation of direct ocean traffic with an enterprise such as the Hydro-Electric Project, Ltd., is about to establish Upper Humber with water power capable of developing 200,000 horsepower and with a capital of \$20,000,000.00 to start with, if efficiently managed ought to be able to multiply its several times over in the course of ten years.

Yours truly,  
T. J. FREEMAN.  
19th, 1922.
