

I will just add that the population of Upper Canada is . . . . .	952,004
And the grand total of students and pupils attending universities, colleges, grammar, private and common schools, is . . .	177,624
The population between the ages of five and sixteen years, is about . . . . .	258,000
The amount available for salaries of common school teachers in Upper Canada . . .	£102,050
The average number of months each common school has been kept open . . . . .	10 $\frac{3}{4}$
And the average attendance of pupils during the year 1851 at the common schools, was . . . . .	83,390

But the subjoined very interesting table furnished to me by our excellent chief superintendant, Dr. Ryerson, so lately as October, 1853, gives a most satisfactory view of the wonderful progress of Upper Canada in school matters.

By it, it appears that the number of pupils attending common schools has increased, within the last ten years, from 66,000 to 179,500, whilst the whole school population, between the ages of five and sixteen, are only 262,700. It shows, too, that the total sum available for educational purposes has increased, during the same period, from £41,500 to £176,000, that is, that, for the same period during which the population merely *doubled*, the amount devoted to
