

# COBALT---Big Advance in Kerr Lake of Interest to Hargreave Holders

## Kerr Lake Advances 55 Points Hargreave is Also Higher

Beaver Sells Up on Reports of a Rich Strike—Other Issues Quiet and Steady.

Wednesday Evening, Aug. 18.

Upward movements in Beaver and Kerr Lake were the principal features of the day. Trading was generally limited and there was an easier tendency in some sections of the list, the price changes were, in the main, insignificant to call for special comment.

Following the reports late last night of a rich strike in the Beaver mine, the stock exhibited considerable life on both boards, transactions continuing by far the bulk of the day's business. The opening advance of seven points from yesterday's close, this also being the highest figure reached. The stock was then offered through the market, the amount of liquidation, considering the price, was not particularly large. Late in the afternoon the price eased to a certain extent, closing at 39, the strongest issue on today's board, advancing 55 points to \$3.90 during the session and closing at the highest figure reached.

The continued appreciation in the price of this stock is the inevitable result of its growth in actual value, resulting from increasing reserves of ore. It is based on good authority that the Kerr Lake is putting three tons of ore into sight for every ton that is taken out. The Jacobs vein has been cut at the 600 foot level, and is found to be rich and strong as ever. The shares were in good demand all day, and any large orders could only be filled by raising the market price. Much of the buying came from New York.

There was considerable dealing in Hargreave today, the stock selling as high as 56 1/2 cents. The increased activity in this issue is due to the splendid finds on the adjoining Kerr Lake property and the good showings realized on the Hargreave property itself. It is not for the fact that the large selling order came into the market during the day a still greater advance would have been in all probability.

The other listed issues were generally fractionally easier today. Peterson Lake, Gifford, Rochester, City of Cobalt, Chambers-Perland and some others were dealt in moderately, but profit-taking was apparent, and these issues closed slightly lower than yesterday. The breadth of operations in the market is expected with this growth of interest.

### SURFACE WORK NOW

Underground Development Will Follow at a Later Date.

H. Lawrence Brown, who is in charge of the Belmont Mine, passed through this city yesterday on his way to Buffalo. Mr. Brown spoke most hopefully of the ultimate outlook for the Belmont property.

He is concentrating all our efforts at the present time," Mr. Brown said, "on surface work on this property, trenching, opening up new veins, and as far as possible, prior to the opening of the winter season, when we will have to undertake shaft work. Recently we uncovered one of the finest veins in the whole camp, this vein running fully 300 feet along the surface of the claim.

"We expect the power from the Race Point Chutes will be available about the first of October, and when we get this, such machinery as we require will be procured and active underground work will be undertaken.

"From my own experience as a mining engineer for many years, I might say that I am perfectly satisfied that the Belmont Mine will be one of the paying mines in the camp."

### BULL MARKET IN SIGHT

Recent Strikes at Cobalt Will Force Prices Higher.

Usher, Strath & Co. in their weekly letter say: During the past month we have visited the Cobalt camp three or four times, and have paid special attention to the various conditions affecting the market for Cobalt stocks.

After carefully considering the subject and making special enquiries as to the position of the different properties, we have no hesitation whatever in stating that, in our opinion, one of the biggest, if not the biggest, Cobalt markets will be seen this autumn, and we think the bull movement will be general within the next few weeks. In various instances there are signs of the beginning of a bull market, such as the recent rise in Foster and Ogilvie in the low priced stocks, and the continued strength of La Rose. The camp was never on such a good basis as it is at the present time, the dividends for the first half of the present year have more than exceeded the dividend paid for the whole of last year, and the shipments from the camp are greater than have ever been in tonnage. This last fact is more remarkable when one considers that a large portion of the ore being shipped is concentrates.

No one can continue to be a bear in Cobalt, in view of recent rich strikes made on properties in different parts of the camp, and these strikes, in our

opinion, are simply a forerunner of many similar ones yet to be made. We think our clients will do well to buy Cobalt stocks at once and hold them for very much higher figures.

### SAY CHIEF WAS TOO ROUGH

New Liskeard Policeman Used His Baton Freely.

NEW LISKEARD, Ont., Aug. 18.—(Special.)—I have had it in for Pease, and now is my chance," are the words attributed to Chief of Police Miller of Hallsbury last night and there are several people willing to make affidavits as to the same.

After the ball game yesterday at Hallsbury, Pease found a friend, a Swedish boy in the waiting room, intoxicated. He attempted to arouse him when Miller appeared, commanding Pease to take hands off. Pease complied, and Miller at once arrested the Swede as a drunk and disorderly, placing him in a buggy with his feet hanging near the spokes, and started to drive off, after beating him several times round the head and shoulders with his baton. The Swede Pease interposed, saying kindness would do more than brutality, when Miller attacked him with his baton.

Miller afterwards swore out a warrant for Pease, charging him with obstructing the police in their duty, and the case called this morning was remanded for one week.

The Swede was fined \$10 and costs. There were a great many people at the station when this occurred who are willing to swear that Pease acted in the right.

The case which will be called on Tuesday next promises to be one of unusual interest, as Pease has subpoenaed 47 witnesses from New Liskeard and Hallsbury.

### ASSAYS 8000 OUNCES

Second Shot on Recent Beaver Discovery Shows Even Greater Values.

From enquiry at the Beaver Mine offices yesterday, it was learned that a wire had been received stating that the second round of assays on the newly discovered vein, and that the ore taken out assayed about 8000 ozs. of silver to the ton.

A Broadening Tendency. H. O'Hara & Co., in a market letter dated Aug. 17, says: The broadening tendency, which has been evident since the first of the week, is still showing up well, and the Cobalt market has certainly benefited by the new rule allowing members of the Toronto Exchange to do business with those of the Standard and Mining Exchange. Shipments from the camp continue to be well up to the average, and the general outlook seems to point to better markets.

A Searchlight Excursion. HALLSBURY, Aug. 17.—A large crowd of Hallsburyans took advantage of the fine evening to enjoy a party on Lake Timiskaming in the form of a searchlight excursion.

The Hallsbury Navigation Company's steamer "Silverland" is an ideal boat for this purpose, as it has a powerful searchlight, which, when thrown on the high bluffs below the town, gives them weird appearance.

Many of the young people were on board, and they enjoyed themselves immensely, until the searchlight was turned on them.

Moonlight excursions are promised, and they will be very popular.
