

JULY.

The first part of this month will be exceedingly sultry—the glass ranging from 78 to 90 fahrenheit in the shade, and on the 11th at noon, it will rise as high as 99. On the 12th a heavy thunder storm, after which the heat will become more temperate. On the 14th, 15th and 16th, cloudy weather, with nearly incessant rain. After this period the weather will again become bright and sultry and continue so to the end of the month, with occasional thunder squalls.

MILK.—To divest this, and butter, from the taste of turnips, cabbage, wild onions, or other offensive plants, on which the cows have fed, put a quart of boiling water into each pailful of milk, when it comes from the cow.

Last Quar. 4d 0h 14m m. | First Quar. 18d 10h 0m m.
New Moon, 10d 6h 0m a. | Full Moon, 26d 6h 24m m.
