When He Came Home.
"When he comes home we'll fill the place with flowers and guests from gate to dome!"
"With flowers and guests from gate to dome!"
"The merry day that he comes home!"
"The place was hushed from gate to dome!"
"We laid white roses on his breast,
All wet with tears when he came home."
—Truth.

The Summer Fallow.
Hiel an' me don't often have any words, but once in awhile he does get such notions in his head that I just can't stan' it—nor there, couldn't nobody else, neither. This trouble come about last Spring, or you might say 'way long last Fall, when he was gettin' the crops in.

There was one piece of wheat that didn't amount to nothin'. He mowed it really—it was so dreadful weedy an' lodged that he couldn't do anything with the harvester. Well, as I was sayin', it wasn't good for nothin', an'

that made him cross, so I didn't say anything back, but made some cream gravy with the pork-steak and told him to set up.

We didn't say any more about the weedy lot for a long time; but he studied the paper every day, an' I was wonderin' what was comin' when one day, as we was sittin' home, takin' our turkey, he says, 'as he come by the...

"To what?" sez I.
"To put that into Summer fallow," he sez again.

"Wal, I hope you'll have a good crop, I sez. Will there be any market for it here, or will you have to take it to Markato, same as you used to your barley?"

You see, I've heard father an' the boys talk about going into the fallow to burn brush; but of course I know Hiel couldn't mean anything like that, and so I thought it might mean some new kind of grain lik it.

He looked at me out of the corner of his eye and sez:
"Yes, I can get rid of all I'll raise, I guess," an' he give the lines a little jerk that I learned long ago means bad temper.

I was kind of put out, for I had doted on a nice field of corn and some cane. They say cane seed is such good feed, and sorghum makes splendid vinegar, and I can do up lots of things in it that taste real good. But, as I said before, I don't believe in arguin' with a cross man, so I kep' still.

We'd had a pretty cold afternoon, waiting around for Coo-sock to get to our load. Everybody was bringin' in their fowl just before Thanksgiving, and you know how the wind sweeps up that Main street, so we was glad enough to get away.

before I went away, and I tell you the heat felt good. We took a doughnut and a glass of milk apiece, and I forgot all about the new crop till 'most Spring, when one day I happened to think about it and asked Hiel where he was going to get his Summer fallow seed.

He smiled as pleasant as could be. It was Sunday, and I had just clipped his hair and trimmed his beard a little, and he had on a nice new pair of woolen socks, and set with his feet up in a chair by the fire. His face looked that when a man feels comfortable, he is pretty sure to be good-natured. Well, he smiled an' sez:

"My Summer fallow seed? I guess I shall have to send away for it. I don't think they keep it around here."

I didn't say any more then, for I know he didn't have much money to spend for fancy seed and he gets so blue when we talk of money this year that I couldn't bear to spoil our nice day. But I kept it in my mind, and thought I would do a little planning on my own account. So I began to save a little here an' there. Hiel never was the man to inquire after the butter and egg or poultry money, an' I just did my best to lay by a saun against seed-time.

I know there was about ten acres in the field, and, if it was anything like wheat, it would be somewhere about two bushel to the acre, and that would be about twenty bushel. Then, if it was a fancy kind of grain, it would be anyway a dollar a bushel, an' that would be twenty dollars.

Now, I didn't know, no more than the cat, where I was going to get twenty dollars; but I'd do what I could, and maybe he could make out of doors he went.

Curious Calendar Facts.
There are some curious facts about the calendar. No century can begin on Wednesday, Friday or Saturday. The same calendar can be used every twenty years. October always begins on the same day of the week as January, April and July; September as December. February, March and November begin on the same days. May, June and August always begin on different days from each other and every month in the year. The first and last days of the year are always the same. These rules do not apply to leap year, when comparison is made between days before and after February 29th.

Cattle Feeding in England.
Aberdeenshire is a great beef producing county, and much of it finds its way to the London markets. It will surprise many American farmers to hear that oat straw and turnips form the basis of the feeding. The reputation of the beef of the north of Scotland is mainly owing to the use of the Shorthorn-crosses upon the native breeds of cattle, the poll-d breed more particularly, in connection with the local system of rearing and feeding. Almost all the soil of Aberdeenshire grows yellow turnips of excellent quality, and most of it grows good crops of swedes. The farmyard manure, and most of the artificial manure, is applied with the turnip crop. The oat straw, too, is very good. Hay is grown only for the supply of horses in winter and spring, not for the cattle, and there is no permanent pasture, the only seed sown being rye grass with a

or oats in a six years' course of cropping. The older cattle are tied up in the stalls about 36 weeks in the year, the stock cows in lyes, from which those in calf are never loosed, from autumn to spring, everything, including water, being supplied to them in the stall; young cattle mostly in covered boxes 14 by 16 ft., with yard of the same size to 4 heifers of 10 to 12 months old; no cattle, old or young, turned out to the fields during winter and spring. In autumn the food is barley straw or oat straw with yellow turnips. These turnips are good to February or March, when swedes take their place, and with both the only other food in common use is straw principally oat straw, until the grass season begins in May.

Pineapple Juice for Diphtheria.
Pineapple juice is the latest remedy for diphtheria. The pineapples are compressed and the juice used as a drink. It is said that the negroes of Georgia and other southern states have used this remedy for years. The juice cuts or burns out the membrane of diphtheria rapidly. Constitutional medicines are always necessary. The juice is a local remedy only and taken in teaspoonful doses every two hours undiluted. The local journals assure that pineapple juice acts so promptly that few, if any, cases of diphtheria perish. It is harmless and agreeable and efficacious.

Cover During Sleep.
The object is simply this: Nature takes the time when one is lying down to give the heat a rest, and that organ consequently makes ten strokes less a minute than when one is in an upright posture. Multiplying that by 60 minutes gives 600 strokes. Therefore in eight hours spent in lying down the heart is saved nearly 5,000 strokes, and as the heart pumps six ounces of blood with each stroke, it lifts 30,000 ounces less of blood in a night of eight hours spent in bed than when one is in an upright system. As the blood flows so much more slowly through the veins while one is lying down, extra coverings must then supply the amount usually furnished by circulation. —*Popular Science News.*

A good and pleasant cure for hoarseness is to roast a lemon until it is soft all through, do not allow it to burst, and fill the lemon with as much granulated sugar as it will hold, then eat it hot.

Lillian, the bright daughter of a farmer living some eighty miles from Toronto, was visiting her aunt in the Queen city during Fair time.

The little country girl, only in her eighteenth year, was a model of all that pertains to housework; she excelled in butter-making, cooking, sewing, crocheting, and understood the art of mending old things look like new—home dyeing with Diamond Dyes.

During the second week of Lillian's visit, her aunt intimated one day that she had made a careful selection of some clean but faded skirts and suits of boys' clothing which she thought were good enough for another season's wear if they could be properly re-colored.

Lillian's aunt acknowledged that she had said she was encouraged by the statements made in some of the newspapers that — Dyes would work wonders for her.

At once Lillian came to her rescue and said: "Auntie, for goodness sake do not risk your good garments with these common dyes; they are quite useless, I tried a package some time ago in order to satisfy my curiosity, and they gave just such results as I expected—spoiled pure dyestuff, quite free from grease. Let me suggest the use of the Diamond Dyes; they are safe and sure, and your colors will be just right. Send to the drug store for them and I will assist you in your work."

The Diamond Dyes were procured, and part of an afternoon was spent by aunt and niece in making the old things look like new creations. All were delighted with the magnificent results, and Lillian was particularly proud of the achievements of her friend the Diamond Dye. At the tea table that evening the aunt said: "Lillian, your experience in dyeing certainly saved us from trouble, loss and disappointment."

Pineapple juice (by analysis) contains: Sugar, water, albumen, citric acid, malic acid, tannin, cellulose. Citric acid is found in lemons, oranges and plums, and has been used in malignant throat diseases for many years. Any mild acid acts well in
