AGRICULTURAL NOTES.

—Soap suds are said to be death to current worms.
—Dakota reports that many trees froze to death last winter.

—Hornless cattle are coming into great favor on the western ranges.
—England owns 25,000,000 fowls, and 1,000,000,000 eggs were imported in 1885.

—The New York Milk Exchange has reduced the price of milk to farmers to two cents a quart.

—Over 1,000 head of cattle have arrived at Medicine Hat, N. W. T., for ranches in the vicinity.

—Hay made in a fine day with the heat of the sun, says Dr. Veeler, loses practically nothing of its value.

—Tuberculosis prevails to an alarming extent among cows in the country adjoining Philadelphia, and some have been ordered killed.

—An Illinois farmer's wife claims to have cleared more money from the sales of the poultry yard than her husband did from the balance of the farm.

—Now it is stated that not only will there be a large crop of strawberries at the South, but that the prospects are as good for as large a crop of peaches as last year.

—Mr. James Keegan has sold his half of the famous three-year-old Barbett stallion which he recently brought from Prince Edward Island, to Mr. Geo. Cozy, for \$600.

—During the past year butter reached lower figures than at any time since 1861. The lowest price during the past year was reached in June, when fancy creamery sold in New York city for eighteen cents.

—The Sussex farmers are sending more milk to St. John than they did last year, but many will patronize the butter factory, which has been removed from White's Hall and is operated in conjunction with the cheese factory at Roschville.

—Mr. Theron E. Platt, of Fairfield county, Conn., has raised two hundred varieties of potatoes on his farm during the past year. The study of fungoid pests of the potato has also occupied his attention, and his discoveries respecting them to disease of this plant are likely to prove serviceable.

—The question of raising steers profitably can never be settled by theories, and while on the one hand some claim marvelous profit in feeding, and on the other certain loss, farmers are settling the question to the satisfaction of their pocket-books. Colby Dudley, of Readfield lately sold a grade Hereford calf between fourteen and fifteen months old, that dressed 625 lbs.

—The New Gloucester Creamery is one of the most successfully managed of any in the State; the patrons enthusiastic and satisfied with the results, and we think they have reason to be. The following is the account for April: Number of inches of cream collected, 169,262; amount of cash received, \$2,103.53; expenses, \$26.31; price paid per inch for cream, 10 1/2 cents. How many farmers can show as good net receipts for cream as they obtain in New Gloucester?

—Twenty-seven cows to each one hundred inhabitants was the record from 1790 to 1860, and this proportion did not vary one per cent. during these seventy years. During this time, however, the average production to a cow increased till there came to be a surplus of dairy products. At the present time there are but twenty-three cows to each hundred inhabitants, yet the surplus of products is better than twenty years ago. Better animals and better feed are bringing larger averages. There is room for still further improvement.—Maine Farmer.

—The latest swindling scheme is the following: A man goes through the rural regions with a lot of salt put up in jars, which he claims to be a surplus of certain insinuations are to bore a hole in the stump, put in the powder, plug up the hole, let it stand for six weeks and it will turn away down below plow line. The six weeks provisions is a wise cap for it allowed the agent to get away. An examination of the powder, however, has proved its worthless qualities, and the farmers who invested in it can't find time to talk about it.

—These are some of the reports from the cattle plains: A reporter saw 1,700 dead cattle in one herd a few miles from Spearville, Kan., about the middle of March, and the prairies were thickly strewn with dead sheep. The number of dead cattle in the Pecos Valley of Texas was placed at 3,000 early this month, and the mortality continues at a fearful rate. The herds that started on the trail are scattered along the river a distance of 40 to 100 miles and "can not go any further" on account of inability to drag along in pursuit of feed, owing to emaciation and great weakness. This is the result of the spring drouth, following the hard winter which depleted the unsheltered and unfed creatures to more than the usual degree. It is said to think of such a vast aggregate of slow torture, due to heartless human greed.

SACKVILLE, N. B., THURSDAY, JUNE 17, 1886.

WHOLE NO. 838.

Colonial and Indian Exhibition.

(From the "Canadian Gazette," London, England, May 27, 1886.)

VISIT OF THE QUEEN TO THE CANADIAN EXHIBITION.

On the morning of Friday last the Queen, accompanied by the Prince of Wales, Princess Beatrice, and the Duchess of Albany, visited the Canadian section in the course of an informal inspection of the Colonial portions of the Exhibition. Entering at the agricultural court, the royal party was received by the Canadian Executive Commissioner and Lady Tupper. After presentation by the Prince of Wales, Lady Tupper handed to Her Majesty a bouquet of Maréchal Niel roses, lilies, ferns, and other flowers. Lady Tupper also took this opportunity to express great regret that circumstances had prevented the presentation to Her Majesty of the bouquet sent by the Montreal Horticultural Society. The Marquis of Lorne, who had previously been in the building, here joined the party, and presented Dr. Selwyn to Her Majesty. Both the Queen and the Prince of Wales expressed admiration at the arrangement of the agricultural trophy, and evinced much interest in the display of fruits, grains, and general agricultural products. Proceeding for a short distance down the south side of the central gallery, Her Majesty, accompanied by the Prince of Wales, whose arm she took, made a detour through some of the Australian courts. On again entering the central Canadian gallery from the South Australian portion of the central annex, attention was specially drawn by Sir Charles Tupper to the large map of the Dominion, and to the completed line of the Canadian Pacific Railway—in the progress of which the Queen and her eldest son have been known to take great interest. Some time was then spent in an examination of the game trophy, special interest being excited by the Hubbard natural history collection, and by the fur exhibits of Messrs. Renfrew of Quebec, and of the Hudson's Bay Company. Here Her Majesty was pleased to purchase an elegant lady's sable set from the exhibit of Messrs. Renfrew, and a silver fox skin from the Hudson Bay collection. Passing the trophy, the Queen and her eldest son also occupied the attention of a handsomely framed photograph of Sir John Macdonald arrested attention, and Her Majesty expressed great satisfaction at the Canadian Premier's recovery from his recent illness. In the final court, which was next reached, the royal party much admired the statues from the head of Lake Superior comprised in Mr. Keefer's collection, the magnificent amethyst exhibited by the Executive Commissioner from Amethyst Island, and the specimen of gold from the Blue Nose lode belonging to the Nova Scotia Government. In the western gallery the machinery in motion claimed considerable notice, as well as the photographic views of the Windsor Hotel and Ice Palace of Montreal, prepared by Messrs. Notman of the same city. The educational court was next entered. In the Ontario portion Dr. May was in waiting, and reaching that allotted to the Province of Ontario, Lord Lorne presented the Hon. Mr. Olmest, Superintendent of Public Instruction for the Province of Quebec, and Mr. Joseph Mannette, who is connected with the library collected by the Dominion Government. Her Majesty here noted with interest the evidences given by the exhibit of the great advance made during recent years in the education of the Dominion, and from this court entered the New Zealand section, expressing her great gratification at the parts of the Canadian display that had come within her notice.

AGRICULTURE ETC.: INTERVIEW WITH PROFESSOR MACDON.

Everyone who pretends to any knowledge of Canada, and especially its rural regions, has read Macdon's "Mantle and the Great North-West." For while we march with almost unparalleled rapidity in these western countries, yet so complete is this work, that it still remains a standard authority.

"Well, Mr. Macdon," remarked a representative on meeting the professor in the agricultural court, "what do you think of Canada's agricultural display?"

"It is unquestionably the display from the Dominion. The trophy here is a marvel to visitors, and well it may be, for after all there is nothing of which Canada can justly be so proud as the progress of its agriculture."

"But, Professor Macdon, this agricultural section is not exclusively devoted to cereals?"

"Oh dear no, to leave out the butter and cheese exhibits would be to omit one of the leading and one of the most hopeful industries of the Dominion, allied as it is with the great cattle trade, of which it is hardly within my scope to speak here. There cannot be a moment's doubt that Nova Scotia, New Brunswick, and Quebec are exceptionally suited to these industries, and yet they have devoted to cereals."

"Is it reported that the betrothal of Princess Louise, eldest daughter of the Prince of Wales, to Prince Oscar, son of the King of Sweden, will be soon officially declared?"

"People from Dakota, Minnesota and Texas, are immigrating in large numbers to the Canadian North-West."

These four provinces is bound up in the great cattle industry and in the manufacture of butter and cheese, rather than in wheat growth. This will be their forte, while the North-West will supply the needs of the outside world in wheat. You know how successfully the Canadian cheeses compete with the Americans in British markets. We have every advantage in the way of climate, and of natural conditions, generally, while we understand quite as well as they do how to make the best article. The same can hardly be said of butter. There is truly no reason why our butter should not be first-class, equal to the very best of Dutch butter. Our butter-makers can only gain this point by making nothing but the best article. There is no reason why Canadian butter should not be in the supply of butter in hermetically-sealed cans to the most distant markets. The room for development is great, and I sincerely hope we may soon see these exhibits one cannot but feel that Canada has great reason to be proud of her magnificent heritage. And not only Canada, but Old England too. We do want Englishmen to realize from this display the great resources of our country, only calling for much greater development than anything the past has ever seen. When will England become educated to the great fact that, with the Colonies at her back, she can supply all her wants and defy the whole world?"

They are not Foreigners.

(From the Montreal Star.)

A Nova Scotia sealer newspaper wants to know what community of interest exists between a man living in Pictou, Nova Scotia, and another living in Hamilton, Ontario. This may be answered by another question: What community of interest exists between a man living in Pictou, Nova Scotia, and another living in Hamilton, Ontario? The life of the ordinary citizen of Pictou, Nova Scotia, will probably make little difference to the citizen of Hamilton, Ontario, but the heart and great mind born in Pictou can make his influence felt in every part of the Dominion. Sir William Dumas, a native of Pictou, and every Canadian honors his name. Principal Grant is a native of Pictou, and his influence has been felt from the Atlantic to the Pacific. Rev. Mr. Rand, the great linguist, lives in a small Nova Scotia village, yet thousands of Canadians have enjoyed the Indian legends which would never have been known to white men but for his industry and genius. The Pictou community resident of Pictou buys some of Hamilton's manufactured wares, and if he doesn't sell them, he sells something in return it is because he is less enterprising than his Ontario fellow-countryman. The people of Nova Scotia are Canadians, and it is useless to pretend that they are foreigners.

—Dominion Day is now fixed for the formal opening of the Canadian Pacific Railway to the Pacific Ocean. On the same day, by a lucky coincidence, the repayment of the loan of thirty millions will take effect. Many members of the legislature may be expected to accept the invitation of the company to visit British Columbia. The road will open with fair prospects of financial success. The energy shown in construction will not be without effect, played in making the road a financial success. Mr. Van Horne speaks of it as the aim of the company to reduce the passage from Liverpool to the Pacific to ten days, an achievement which the future probably has in store for us.

—For fixing soils in embankments or where there is wash, reclamation is usually placed upon the roots of grass or other plants; and long delays are often incurred, with frequent renewals and repairs of gulleys, before a network of roots can be obtained capable of giving a firm foundation. M. Canby, of the French railway service, has found in the double poppy a most valuable plant for this purpose. It grows quickly, and helps to support the soil in about two weeks, while, at the end of three or four months, it forms a stronger network of roots than any grass known. It is an annual, but sows itself after the first year.

—It is said that the ostrich farmers of Cape Town are going back to their original pursuits of sheep-raising. The business of ostrich farming amounted to a craze, and the feather market was overstocked. Fifty dollars will now buy a pound of ostrich feathers that once brought five times that amount.

—Mrs. John A. Logan in her Washington house has an old-fashioned rag-carpet on the stairs, and picturesque Indian blankets for portieres. On one of her parlor mantels is a lambrequin made of South American mulberry-tree bark.

—Smith—That dog of yours keeps me awake nights, howling. Jones—Why, I have no dog. It must be my daughter singing. Smith—Is that so? Excuse me, I am sorry. I don't suppose she can be shot, eh? The Judge.

—It is reported that the betrothal of Princess Louise, eldest daughter of the Prince of Wales, to Prince Oscar, son of the King of Sweden, will be soon officially declared.

—People from Dakota, Minnesota and Texas, are immigrating in large numbers to the Canadian North-West.

Eating Before Sleeping.

Dr. R. M. Hodges once read a paper before the Boston Society for Medical Improvement, in which he touched on this question which doctors disagree, and said: It is a common impression that to take food immediately after going to bed and to sleep is unwise. Such a suggestion is answered by a reminder that the instinct of animals prompts them to sleep as soon as they have eaten; and in summer, after dinner is taken at mid-day, is a luxury indulged in by many.

If the ordinary hour of the evening meal is 6 or 7 o'clock, and of the first morning meal 7 or 8 o'clock, an interval of twelve hours or more elapses without food, and for persons whose nutrition is at fault this is too long a period for fasting. That such an interval without food is permitted explains many a restless night, and much of the head and backache, and the languid, half-roused condition on rising, which is accompanied by no appetite for breakfast. This meal itself often dissipates these sensations. It is, therefore, desirable, if not essential when nutriment is to be crowded, that the last thing before going to bed should be the taking of food.

Sleeplessness is often caused by starvation, and a tumbler of milk, drank in the middle of the night, will often put people to sleep when hypnosis would fail of its purpose. Food before rising is an equally important expedient. It supplies strength for bathing and dressing, laborious and wearisome tasks for the underfed, and is a better morning "pick-me-up" than any "tonic."

—Good Housekeeper.

How to Disappoint a Balking Horse.

The Fitchburg Sentinel tells how a Leominster farmer cured his horse of a balking freak by gentle means. When will England become educated to the great fact that, with the Colonies at her back, she can supply all her wants and defy the whole world?"

He drove him, attached to a rack wagon, to the wood lot for a small load of wood. He did not beat him, but tied him to a tree and "let him stand." He went to the lot at sunset, and asked him to draw, but he would not straighten a tug. "I made up my mind," said the farmer, "when that horse went to the barn, he would take that load of wood. I went to the barn, got blankets, and covered the horse with them, and stood until morning. Then he refused to draw. At noon I went down, and he was probably hungry and lonesome. I drew that load of wood the first time I asked him. If he doesn't sell his horse, I'll feed him. I then rewarded him with a good dinner, which he eagerly devoured. I have drawn several loads since. Once he refused to draw; but soon as he saw me start for the house, he came after me, and the load. A horse becomes lonesome and discontented when left alone, as much so as a person, and I claim this method, if rightly used, is better for both horse and man than to beat the animal with a club."

—Parks' cotton factory at St. John employs over 300 hands. Children earn \$2 per week, girls \$4 to \$6, men from \$5 to \$12. Mr. Parks states that three-fourths of the workmen are from the Western Provinces, and were not on Ontario and Quebec the business would come to a standstill in a week. The mill was erected in 1861—the first put in operation in Canada. Of our twenty odd mills there are eight in the Maritime Province, and the business done by the latter is constantly increasing. The bulk of the shirtings, grey cottons and hosiery yarns used in the Dominion are made at the mills in the Maritime Provinces, the chief of which in the order of erection are the Parks, the St. Croix, the Halifax, the Moncton, the Windsor, and the Gibson.

—A well known New York lawyer, while addressing a country jury, got down on his knees to illustrate the manner in which his client prayed. The awkwardness of the effort provoked some laughter among the spectators, which the judge promptly rebuked, saying: "This commendation is disrespectful to the court and unfair to the counsel. It is probably his first experience."

—A druggist in Philadelphia, who furnished goods to the poorhouse, has been detected putting up bread pills and colored water for the paupers, and it is not strange, therefore, that he has been little sickness in the poorhouse this spring.

—She: "You seem blue; have I done you to grief?" He: "No, I have just gained one. I asked Miss Clara if she would be my wife and she said 'No, but I'll be your friend.'"

—A new English dictionary is coming out with 240,000 words. People who are over bent on having the last word should subscribe at once.

—The Quebec politicians are actively preparing for the approaching local election in that Province.

—The 250th anniversary of the foundation of Harvard College occurs next November.

—A horse was scared to death by a train at Heiskell's station, Tenn., recently.

GENERAL NEWS.

—On the 22nd ult., Mrs. John McIntosh of West Cove, C. B., went to milk the cows. About fifteen minutes later Mr. McIntosh went to assist her, when he found her dead between two buckets of milk.

—Thursdays, Vernon H. Knight, a well-to-do gentleman of Souris, was out driving when his horse ran away, collided with another wagon and the man was thrown against a fence injuring his spine. He died Saturday.

—The drouth is beginning to tell on the water supply of Galveston, Tex. Hundreds of reservoirs connected with residences and business houses are empty. Water is being sold at a cent a gallon and fifty cents per barrel.

—Fire broke out at Coal Branch station last night about six o'clock, and the building was destroyed. The destruction was about half the village. Among the properties totally consumed were J. T. Swift's store, etc., Samuel O'Neill's hotel and dwelling. The amount of insurance could not be learned. The loss will be heavy.

—One hundred and sixty persons were killed at the New Bay, C. B., Presbyterian church on Sunday last, as the result of the labors of the Evangelists Meikle and Macdonald. The church was destroyed by fire. More than 150 were added to the ranks of the church in the same service. Mr. Macdonald was dispersed last Sunday.

—John Long, fifteen years of age, an inmate of Abell's deaf and dumb institution was shot in the leg by some unknown party. The bullet was proved for, but has not yet been found. This is only another instance of the mysterious circumstances which have occurred about this institution during the past few weeks.

—The Rev. Mr. Long, of the Presbyterian church, will be examined on a charge of setting fire to Abell's building are accused of shooting Long.

Beauty in the Saddle.

If woman, conscious of loveliness, convinced that the gods have appointed her a trustee of beauty for the delectation of the sterner sex and the discomfort of her fellow women, has a keen perception of the environment most favorable to beauty, she certainly will not hesitate to seek the saddle as her throne, and the soft, warm, melting landscape for a background. As the glove fits, so must the habit. Then, and then, with a free rein in a firm bridle hand, she is off with a dash. Good! The color comes, the eyes sparkle, and the tresses would prove a triumph to the comb. And this in the sunlight. Here 90 per cent. is to be attributed to nature and 10 per cent. to the artistic skill of the way from high lights and dreary five o'clock tea. Mount and be off. A dash around the park in pursuit of health and happiness. Into the saddle, young maids and matrons. You will then rival the stars, to be followed in your course by the eyes of honest admiration.—New York Herald.

—Herr Most and two of his associate anarchists have been convicted of misdemeanor by a New York jury. Most gets one year's imprisonment and is required to pay a fine of five hundred dollars. This is a good sign; it shows that, where the law is to be upheld against anarchists, the average jurymen of Gotham is not afraid to do justice.

—What do the eight-hour people propose to do with their two extra hours when they get them? queries the Philadelphia Inquirer. It is supposed that they intend to assist the women folks in their household duties, and thus reduce the laborer's ten-hour day to fourteen hours to fourteen a day.—New Haven News.

—A Chicago citizen talks of transplanting one of the big California trees to his summer residence near that city. The one he has selected is 390 feet high and 98 in circumference. It is estimated that the transportation cost him \$18,000. The weight of the levathan is about 40,000 pounds.

—St. Stephen, N. B. is to have a first-class water supply system for \$20,000 a year under a twenty-year contract. Calais, Me., and St. Stephen are to be supplied from the same pumps and reservoir.

—The death is announced at Kingston of H. B. Rathbun, head of the largest lumbering concern in Canada, aged 75 years. His fortune was estimated at \$1,000,000.

—As one of the results of the British and Colonial Exhibition, a firm in Woodstock, Ont., has entered into a contract to sell to parties in Great Britain 3,500 organs.

—Cardinal Taschereau was officially notified on 18th ult., of his elevation to the red hat. The installation took place June 7th, on a very grand scale.

—During the twelve years following the death of Charles Dickens no less than 2,329,000 volumes of his works were sold in England alone.

—A Boston woman sues for divorce because her husband is a rigid vegetarian, and refuses to let her eat meat.

—The prices in England for Canadian cattle improved the latter part of May half a cent.

—A Washington correspondent estimates the presents to Mrs. Cleveland at \$100,000.

—Every third man in Portland, Me., is an Oddfellow.

—Norway spends about \$100,000 a year in fighting leprosy.
