

PURPOSE OF PROPOSED PROGRAM

- To sustain long-term energy self-sufficiency in Canada by keeping open the option for a new energy source dependent on a widely available, virtually inexhaustible fuel.
- To develop scientific expertise in Canada, permitting access to the international research effort at minimum cost.
- To develop industrial, technological expertise in Canada, permitting access to foreign technology and assuring maximum Canadian industrial participation in the construction of fusion power systems.
- To develop in Canada the knowledge and skills to control any environmental problem of fusion power systems.
