BLANCHARD & LEA'S EDUCATIONAL PUBLICATIONS. 0

NEW AND MUCH IMPROVED EDITION.

PHYSICAL GEOGRAPHY.

BY MARY SOMERVILLE.

A new American, from the third and revised London edition.

WITH NOTES AND A GLOSSARY,

BY W. S. W. RUSCHENBERGER, M. D., U. S. NAVY.

In one large royal 12mo, volume, of nearly 600 pages. In extra cloth, \$1.25.

Half bound in leather, \$1.35.

Eulogy is unnecessary with regard to a work like the present, which has passed through three editions on each side of the Atlantic within the space of a few years. The publishers therefore only consider it necessary to state that the last London edition received a thorough revision at the hands of the author, who introduced whatever improvements and corrections the advance of science rendered desirable; and that the present issue, in addition to this, has had a careful examination on the part of the editor, to adapt it more especially to this country. Great care has been exercised in both the text and the glossary to obtain the accuracy so essential to a work of this nature; and in its present improved and enlarged state, with no corresponding increase of price, it is confidently presented as in every way worthy a continuation of the striking favor with which it has been everywhere received.

From Lieutenant Maury, U. S. N.

National Observatory, Washington.
I thank you for the "Physical Geography." It is capital. I have been reading it, and like it so much, that I have made it a school-book for my children, whom I am teaching. There is, in my opinion, no work upon that interesting subject on which it treats—Physical Geography—that would make a better textbook in our schools and colleges. I hope it will be adopted so much generally, for you have Americanized it and improved it in other respects.

From Samuel H. Taylor, Esq., Phillips Academy, Andover, Mass., Feb. 16, 1854.

We have introduced your edition of Mrs. Somerville's "Physical Geography" into our school, and find it an admirable work.

From Thomas Sherwin, High School, Boston.

I hold it in the highest estimation, and am confident that it will prove a very efficient aid in the education of the young, and a source of much interest and instruction to the adult reader.

A COMPLETE COURSE OF NATURAL SCIENCE.

THE BOOK OF NATURE;

AN ELEMENTARY INTRODUCTION TO THE SCIENCES OF

Physics, Astronomy, Chemistry, Mineralogy, Geology, Botany, Zoology, and Physiology.

BY FREDERICK SCHIOEDLER, PH. D.,

Professor of the Natural Sciences at Worms.

FIRST AMERICAN EDITION,

With a Glossary, and other Additions and Improvements.

FROM THE SECOND ENGLISH EDITION, TRANSLATED FROM THE SIXTH GERMAN EDITION,

BY HENRY MEDLOCK, F. C. S., &c.

ILLUSTRATED BY SIX HUNDRED AND SEVENTY-NINE ENGRAVINGS ON WOOD.

In one handsome volume, crown octavo, of about seven hundred large pages, extra cloth. \$1.80.

The necessity of some acquaintance with the Natural Sciences is now so universally admitted in all thorough education, while the circle of facts and principles embraced in the study has enlarged so rapidly, that a compendious Manual like the Book of NATURE cannot fail to supply a want frequently felt and expressed by a large and growing class.

Composed by the same distinguished author, all the departments have a uniformity of style and illustration which harmoniously link the entire circle together. The utility of such a connected view of the physical sciences, and on such an approved basis, is beyond price; and places their acquisition within the reach of a vastly increased number of inquirers. Naturally much is it valuable but to those who wish to have at hand the means of refreshing their memories and enlarging their views upon their favorite studies. Of such a book we speak cordially, and would speak more at length if space permitted.—*Southern Methodist Quarterly Review.*

From W. H. Allen, President of Girard College, Philadelphia.

Though a very comprehensive book, it contains about as much of the details of natural science as general students in this country have time to study in a regular academical course; and I am so well pleased with it that I shall recommend its use as a text-book in this institution.

From Prof. Johnston, Wesleyan University, Ct.

I do not know of another book in which so much that is important on these subjects can be found in the same space.

From Prof. Allen, Oberlin Institute, Ohio.

As a work for popular instruction in the Natural and Physical Sciences, it certainly is unrivaled, so far as my knowledge extends. It admirably combines perspicuity with brevity; while an excellent judgment, and a rare discrimination are manifest in the selection and arrangement of topics, as well as in the description of objects, the illustration of phenomena, and the statement of principles. A more careful perusal of those departments of the work to which my studies have been particularly directed has been abundantly sufficient to satisfy me of its entire reliability, that the object of the author was not so much to amuse as really to instruct.
