WILL FISH AND LOCKE SALMON AT LOCH LOMOND

Commissioner Smith to Plant Million Fry There—Forty-five Thousand Trout Ova Placed in Johnston's and Kane's Brooks This Week—The Mispic Fishway Being Arranged.

Forty-five thousand trout fry were this week planted in the Johnston's and Kane's Brooks at Loch Lomond by Fishery Commissioner D. G. Smith, of Chatham, and the good work is not to stop at that. It is proposed to have hundred-thousand fry there, too, and Mr. Smith will apply for a million fry from the St. John pond. Fishery Commissioner Smith was at the Royal yesterday, returning home after a visit to Loch Lomond, where he has been examining the fishway in the Lake Robert dam, which has been erected in connection with the St. John water works extension. He drove out on Thursday with Resident Engineer Hunter, who had already placed the fishway gate and the baffle as far down stream as the high condition of the water in the river would permit. He says he found the baffle work quite satisfactory, but the gate and intake hardly so. He recommended a little additional work at the intake with the object of retarding the velocity of the current there, of which Mr. Hunter approved, and the new work is to be in position and the fishway in effective working order on Monday, or Tuesday at the latest. The commissioner has instructed Alex. Johnston, the local government fishery guardian of the Loch Lomond waters, to observe the working of the pass and report thereon. Mr. Smith is also to make two or three other visits to Loch Lomond within a short time, to see the progress of the work of planting ova in the advanced stage, instead of waiting for the fry to hatch out and have their sea absorbed before distribution in the different lakes and rivers of the province. He brought with him on this trip a 4,500 lot of ova which were taken from the river by the fishway. He says that if a loss of five or ten per cent had occurred in transit from the hatchery to Loch Lomond he would not have been disappointed, but he was delighted to find, when he and Guardian Johnston opened the lot at the upper end of the big lake on Thursday afternoon, that in three out of the eighteen trays not an egg was spoiled, while only one to seven had "gone off" in the others—so that the loss was practically nothing.

Fifty thousand of the eggs were planted in a spring brook, which runs into the head of the big lake within 100 yards of Mr. Johnston's house, where the Commissioner is now working. The Commissioner is now working on the fishway gate and the baffle as far down stream as the high condition of the water in the river would permit. He says he found the baffle work quite satisfactory, but the gate and intake hardly so. He recommended a little additional work at the intake with the object of retarding the velocity of the current there, of which Mr. Hunter approved, and the new work is to be in position and the fishway in effective working order on Monday, or Tuesday at the latest.

The commissioner has instructed Alex. Johnston, the local government fishery guardian of the Loch Lomond waters, to observe the working of the pass and report thereon. LOG MASS MAKES GRAND PICTURE

Huge Jam of 15 to 18 Million Feet Blocking the River Above St. Basil.

William Horn, of 330 Union street, who owns the Little Falls saw mill, tells of an immense log jam extending ten miles and blocking the river from St. Basil to Green River. He says that Mr. Murdoch, the St. Stephen lumberman, was with him on the train and he estimates the contents of the jam at 15,000,000 to 18,000,000 feet. Mr. Murdoch added that there is a jam in about the same place every year, but this is the biggest yet. They are all nearly all last year's logs.

Mr. Horn says it is a wonderful sight. The logs are jammed tight together, many of them standing almost upright "like sentinels" in the water. The jam is a mile long and is a sight to see. It is a jam of logs, and it is a sight to see.
