WHOLE NO. 698.

Deserve Success and you shall Command it.

Farm and Household.

Best Way to Store Potatoes.
Mr. John M. Stahl writes in the *Rural New-Yorker*: The potatoes should be dug as soon as they have matured. It will not do to leave them to rot in the ground; for nature does not care anything more about them, and the weeds are too sociable to be good. There is nothing to be gained by leaving the potatoes in the ground after they have matured. Their growth is ended. There is much to be lost; they will become impregnated with water and are liable to rot; the potatoes near the surface turn green and become worthless; and if the weather happens to be warm there is danger of a second growth. These are only a few of the losses that may occur. Then they must be dug and stored away. "But," you say, "it will not do to store them away this way, for they will sprout." You are mistaken—sandy mistaken. Let me tell you how potatoes should be stored away, whether the soil is as hot as on India's coral strand, or the zephyrs blow as cold as on Mount Goodwill.

Potatoes should be dug when the ground is dry; for if the ground is wet the soil will adhere to the tubers, and this is not desirable by any means. But if the withered stalks indicate that the potatoes are ready to harvest, dig them though the ground is wet. As soon as dug get them into the shade. The sun will soon darken them; therefore a cool, cloudy day is best for digging potatoes. They should be protected from the wind also, if it be high or dry. I always store a shelter of boards along the fence or on trellises under which I store the potatoes until they are perfectly dry. You must not exclude all air. There must be sufficient circulation to dry the tubers. If they have been dug when the ground was wet and the soil has adhered, rub it off as soon as it becomes dry. Do not attempt to rub it off while moist, for this will make it cling only the tighter. Exercise care in handling. Do not bruise the potatoes or knock off the skin. Use a wooden shovel or saw at all. You may wonder what all this has to do with storing potatoes. Well, the object of storing potatoes is to keep them and these directions are important to be observed if you want to keep them sound.

But to speak of the storing proper. The first thing to consider is the place in which to store them. The best place is a dry, properly ventilated, dark cellar, of a temperature of about 40 degrees Fahr. If you have not this you must make one. It seems to have been clearly established that excessive and prolonged mental labor causes the teeth to decay by consuming the phosphates which would otherwise nourish the dental structures. Dr. Chamberlain therefore recommends that parents and guardians should pay close attention to the condition of the teeth of those under their care, and should, when any signs of premature decay are noticed, give their charges a holiday.

Maryland's Ginning Factories.
The farmers of Harford County, Maryland, have \$1,000,000 invested in ginning factories, and are building more.

Homoeopathy as a Science.

Many of the most important discoveries of the psychologists were rejected by the physiologists, because they could not be proved by their law—and conversely with the psychologists. These contending forces have been brought into lasting alliance by Professor Calderwood. It is proved that close relation can be established between Nature's laws and those of homoeopathy.

Are Our Sheep Improving?

The report of the U. S. Department of Agriculture gives the number of sheep for 1881 as 21,500,000 and the production of wool as 55,000,000 pounds. This gives an average fleece of 2.55 pounds. In 1870 there were 24,000,000 of sheep and 135,000,000 pounds of wool. This gives an average fleece of 3.97 pounds, and is a gain of 55 per cent in ten years. This result does not look like a backward movement in this industry. A gain of 55 per cent in ten years ought to be considered very good progress. There has been no report from the Department as to the production of wool during the period between 1870 and 1880, but there has no doubt been a steady progress during this last decade. Sheep are kept for wool and carcass, and this large increase in the production of wool indicates a corresponding increase in the weight of carcasses. We must therefore conclude that our flocks are making satisfactory progress. This progress is largely attributable to the use of purely-bred Merino rams upon the rough, thin-skinned native ewes of the Western States generally. And, with this desire to improve the form of the sheep, has come a clearer perception of the relation of food to growth.

A young man is like an earthen vessel, easy to break and hard to mend. A good man is like a golden vessel, hard to break and easy to mend.

Farm and Household.

Views on the Application of Manure.
The practice of spreading manure over a whole field a long time before plowing is manifestly wasteful, although there is much good testimony to the contrary. Manure is spread on the surface of plowed ground by many farmers who are zealous advocates of the "top-dressing" system. While it is customary to harrow it in as thoroughly as possible, very much still remains on the surface, and a great share of the elements of fertility are evaporated from it into the air and disseminated through the atmosphere and upper laboratory of plant food. Manure, when plowed in, sustains no loss upward or downward in ordinary soils. Water is the conveyor, in one case carrying fertility upward into the atmosphere during the process of evaporation, and in the other bearing it downward into the permanent store-house and laboratory, where all the nutritive elements are secured and stored from the process of percolation, even in case of manure lying at the bottom of the furrow, and not over 20 per cent of plowed-in manure is in that situation, all of which is dissolved and, having been borne downward by water, will have been caught up and retained by the soil filter before reaching a depth beyond the reach of the roots. Evaporation occurs from the surface of the soil as well as at the surface; but here again, the soil filters into itself all that the vapory water tries to carry away. Evaporation operates during a greater share of the days of the three open seasons. It gathers new impetus from each shower of rain, from a heavy rainfall, a shower or a dew.

Surface manuring gives most excellent returns in case of the first crop, say wheat; but it does not benefit the very essential clover which follows, as much as plowing in manure. We need only apply a few simple and clear experiments accompanied by some of the common-sense of science (and indeed common-sense should be the whole of science), to understand the top-dressing involves a flying away of some of our nitrogenous possessions; while it bestows upon the first crop almost all of the remainder of the fertility of the application, adding the scantiest amount to the store of resources in the soil.

Effect of Brain Work on the Teeth.

The French medical journals have recently been discussing the relation of the teeth to the brain, and their conclusions are of considerable importance to all brain workers. It seems to have been clearly established that excessive and prolonged mental labor causes the teeth to decay by consuming the phosphates which would otherwise nourish the dental structures. Dr. Chamberlain therefore recommends that parents and guardians should pay close attention to the condition of the teeth of those under their care, and should, when any signs of premature decay are noticed, give their charges a holiday.

Maryland's Ginning Factories.

The farmers of Harford County, Maryland, have \$1,000,000 invested in ginning factories, and are building more.

Homoeopathy as a Science.

Many of the most important discoveries of the psychologists were rejected by the physiologists, because they could not be proved by their law—and conversely with the psychologists. Sheep are kept for wool and carcass, and this large increase in the production of wool indicates a corresponding increase in the weight of carcasses. We must therefore conclude that our flocks are making satisfactory progress. This progress is largely attributable to the use of purely-bred Merino rams upon the rough, thin-skinned native ewes of the Western States generally. And, with this desire to improve the form of the sheep, has come a clearer perception of the relation of food to growth.

A young man is like an earthen vessel, easy to break and hard to mend. A good man is like a golden vessel, hard to break and easy to mend.

General Information.

The largest man in the British service is Lieut. Southland, of the Fifty-sixth regiment. He is eight feet four inches high and weighs about 364 pounds.
The Pennsylvania Railroad has made a proposal to introduce a uniform railway time bill over the United States, measuring the day by running the hours along past twelve up to twenty-four.
In the town of Vesprim, Hungary, a society of women-haters has been regularly organized, having for its motto "Hate Women," and for its programme "freeing the world from the single evil of woman's rule."
The largest cattle-farm in the world is in Texas and is owned by Charles Goodright. It comprises 700,000 acres and takes 250 miles of fencing to enclose it. But it is yet very thickly stocked with cattle, there being but 40,000 of them.
The carrying of cattle on long steamship voyages has become a regular feature of commerce, but we rarely hear of a vessel being converted into an aviary. The arrival here yesterday of the "Comet," from Tampico, with fourteen red parrots, shows that a floating cattle pen is not impossible.
Official returns last issued show that last year the proceeds of the duty upon playing-cards in France was 2,362,036 francs, or 24,444 francs more than during 1881. In 1879 there were 39 manufacturers and 13,422 retailers of packs of cards, whereas last year there were 60 manufacturers and 13,911 retailers.
Prof. E. Fazio says he has ascertained that in general those who were excavated alive at Ichia were paralyzed, their sight weakened or altogether suspended for some time; most had felt extreme thirst while under the masonry. All asserted that they had never lost hope of rescue.
A lad who died of hydrophobia at Philadelphia was able between the paroxysms to describe his feelings. His distaste for water and other liquids arose, he said, from his horror of the actual fluids, but because the muscles of his throat were so sore and terribly contracted that he knew he could not swallow.
It is a remarkable fact that every year there are more books and publications relating to art issued in the English language than in any other. Out of 886 publications and books on art which appeared in Europe during last year 311 were in English, 269 in French, and 237 in French. The remaining forty-nine publications represent the efforts of the Italians, Swedes, Danes, and Spaniards.
The annual products of the British American sea fisheries are set down at about \$200,000,000. In France 80,875 salmons, macking 22,136 ships and macks, are employed in fishing. The total products from the French fisheries, including the sum derived from the sale of oysters, amounts to about \$35,000,000 per annum. The annual value of the take of fish in Norwegian waters is a little over \$15,000,000.
Prof. Verga, in a paper read before the Lombardy Institute of Science, said that serious dangers threaten the Italian people on account of their recent large substitution of alcohol for wine as a beverage. He told a curious story, by the way, of a distiller who died in consequence of drinking too much of his own concoction. He had been so largely exposed to the fumes of impure alcohol while "strengthening" poor wines that his system absorbed enough of it to poison him.
They tell a story in Silvertown of a minor who was unsuccessful in prospecting, and sat down in the region of his claim on Sunday morning to read his Bible. He was reading in the Gospel of Matthew, when suddenly a fragment of rock, shining with gold, fell from a ledge just above his head and rested on the words: "Ask and it shall be given unto you; seek and ye shall find." Up jumped the miner, searched for the lead, located his claim, and is now a bonanza king.
Mr. Edison says that the idea of propelling vessels through the water by electricity is a dream. He says it is not impossible, but it is impracticable. There is no motive power, and can be none which does not require for its production the expenditure of equivalent energy before hand. Mr. Edison says the dynamo and batteries necessary to propel the steamer "Alaska" across the ocean, at the rate which she is propelled by steam power, would weigh 63,348.
The Rev. Mr. Loper, of Trenton, Iowa, fell in with a stranger not long ago who persuaded him to draw \$760 from the bank to engage in a money-making scheme which the stranger had unfolded. When the clergyman carried his money to a place of meeting he found the other man shuffling three cards. He was drawn gently into a monte speculation and was permitted to win. Thinking that he saw an opportunity to double his original \$760 and his winnings, he risked all his money on a card. The amount obtained from him is among the largest ever taken from a clerical dupe.

A Woman's Nerve.

On last Sunday evening, William Rump and his wife, of Cherryville, Pa., after putting their children to bed, were in front of the house just as twilight was gathering, amusing themselves in a playful way. The husband ran away from the house several rods, followed by his wife. In running, his left arm struck the revolver which was in his coat pocket. And idea flashed through his mind that he would scare his wife in the darkness, and drawing his revolver from his pocket, aimed it toward the bush, and when about to fire his wife came running up between him and the bush, and he shot her in the abdomen.

She exclaimed: "O William, you shot me!"

He turned and said, "if I did shoot you in this foolish way I will take my own life," and he pointed the revolver to his own head, but she caught his hand and begged him not to shoot, saying, "I am not shot," she persuaded him to empty every chamber of the revolver into the woods, and then walked back to the house. At the house she met a boy and told him to hurry and get matches. Her husband heard this and quickly came to her side, and she then told him she was shot, and he should go quickly for the doctor. The wound was a fatal one, and the woman lingered until Monday night, when she died and was buried.

Singular Game of Chess.

A singular game of chess has just been finished in the north of Scotland. The game was begun about twelve months ago in Brooklyn. The first player, Mr. J. B. Munro, made a move, and then passed the scoring sheet on by post to a friend. This friend made a move in reply, and then passed the paper on by post to another well-known player, who made a move in continuation. In this way the document passed from player to player, until it reached the hands of the Scotchman, who played lately in the London tournament, added a move and sent the paper on to Jamaica. From Jamaica it was sent to England, and, after passing through the hands of a number of well-known players, it reached the hands of a Scotchman, who played lately in the London tournament, added a move and sent the paper on to Jamaica. From Jamaica it was sent to England, and, after passing through the hands of a number of well-known players, it reached the hands of a Scotchman, who played lately in the London tournament, added a move and sent the paper on to Jamaica.

Nothing Short of Unmistakable Benefits.

Conferred upon tens of thousands of sufferers could originate and maintain the reputation which AYER'S SALAD-TOILET enjoys. It is a compound of the best vegetable and mineral ingredients, and is especially adapted for the treatment of the skin. It is a compound of the best vegetable and mineral ingredients, and is especially adapted for the treatment of the skin. It is a compound of the best vegetable and mineral ingredients, and is especially adapted for the treatment of the skin.

Various Causes—

Advancing years, care, sickness, disappointment, and hereditary predisposition—all operate to turn the hair gray, and either to shed it or to keep it in its place. It is a compound of the best vegetable and mineral ingredients, and is especially adapted for the treatment of the skin. Every Spring.

How AN AFFLICTING ANNUAL VISITOR WAS DRIVEN FROM A WEALTHY WOMAN.

Pain and simple mechanisms are not liable to get out of order. Complicated watches, intended not only to keep the time of day, but to mark the movements of the moon and stars, are certain to need frequent repairs. Husbands and fathers often fail to see their wives and daughters are more delicately organized than themselves, requiring corresponding care when they are well and assistance when they are ill. Yet much better for woman's fine system is a trustworthy medicine, ready at all times for use, than a deal of tinkering by semi-educated local practitioners.

"Every spring," said the wife of a well-known employee of the Grand Trunk Railway, Montreal, "I have been for some years past troubled with nervous debility and weakness. It was the husband which so many women are called upon to bear, although none the lighter for that.

"Advice and doing to be sure, I had in plenty; and on each returning spring my sickness came as regularly as the buds and blossoms.

"You seem better now."

"Oh yes; I consider myself almost or quite well, and it came about in this way: I had been for some years past troubled with nervous debility and weakness, and it was the husband which so many women are called upon to bear, although none the lighter for that.

"Advice and doing to be sure, I had in plenty; and on each returning spring my sickness came as regularly as the buds and blossoms.

The above Stock will be sold as CHEAP as any in the place consistent with the quality. All kinds of Country Produce, such as Butter, Eggs, &c., at low prices. Sackville, Sept. 19, 1883.

To the Electors of the County of Westmorland.

GENTLEMEN: In compliance with the request of a large number of friends in different parts of the County, I have the honor to announce that I am a Candidate for your suffrages, caused by the resignation of the Hon. P. A. Landry, and in view of the importance of your votes, my best efforts will be used to promote your interests. Soliciting your cordial support.

I am, gentlemen,
Your obedient servant,
W. W. WELLS.

TO THE ELECTORS OF THE COUNTY OF WESTMORLAND.

GENTLEMEN: At the request of a large number of the Electors of this County, I offer for the seat in the Provincial Legislature, made vacant by the resignation of Mr. P. A. Landry, who has gone to Kent. My record when I had the honor to represent the County is before you. The present Government shall have my support in the reforming measures proposed by them—some of them so well begun.
