

Children Cry for Fletcher's

CASTORIA

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drosc and Soothing Syrup. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its use is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Comfort—The Mother's Friend.

COMMISSIONER HIGGINS

HERE TO CONFER ON SALVATION ARMY MATTERS
Com. W. J. Richards, head of the Salvation Army in Eastern Canada and Col. John McHillan, Chief Secretary are conferring with Commissioner Higgins, Chief of Staff and Second in Command of the Salvation

Army for the work who arrived in Boston from London, England, recently. Com. Higgins came to America to discuss matters pertaining to Salvation Army affairs in Canada and the United States, with Commander Eva Booth, head of the Salvation Army in the United States and with the Canadian officials. He was for many years Chief Secretary of the United States and recently succeeded Com. Howard as Chief of Staff and Second in Command. Many matters having any important bearing upon the future policy of the Salvation Army, and its reconstruction work are to be taken up at this meeting and it is expected that on his return Com. Richards will have something to say in regard to the questions affecting the policies to be followed in Canada.

Mrs. Alex Hayes and Mrs. Peter Grondinn were smothered in a fire at the formers' home cause by a coal oil stove exploding.

What Makes a Good Hardware Store?

Not alone the large plate glass windows on the main street, nor the fine showcases inside, nor even the genial, friendly proprietor.

The QUALITY OF THE GOODS sold is what really tells, and brings you back again next time.

That's just the case with the famous Hobbs Gold Medal Lines. The store that carries goods bearing this mark is a good store to trade at.

Look for the Gold Medal label on Harvest Tools, Garden Tools, Lawn Mowers, Sewing Machines, Washers and Wringers, Refrigerators, Cutlery, Binder Twine, Roofing, Safes, Sporting Goods, etc.

ABOUT THE SEED DRILL

What is Considered to be the Most Efficient Type.

The Feeding Device is the Heart of the Drill—Seed Should Be Dropped Directly Under the Axle of the Disc—Give the Bearings Careful Inspection.

(Contributed by Ontario Department of Agriculture, Toronto.)

AS the drill sows, so shall the farmer reap, is no fallacy. It is as true in its content as the maxim "As a man sows so shall he reap." Given the right kind of a grain drill, the seed is all planted at a uniform depth, evenly covered; the earth compacted just enough to retain the moisture around it. These conditions mean that the young-plants will all come up at the same time, that the roots will be well protected, and that the grain will ripen uniformly. As the grain is planted, so will it grow and ripen. If some of the seed is planted too shallow, and some too deep, the seed that comes up first, ripens first. Thus it is that some of the grain is ready to harvest while other patches are still in the milk stage.

The feeding device is the heart of the grain drill. Upon its reliability depends the accuracy of sowing the seed. The drill scale is computed for the average sized seeds, and therefore cannot always be depended upon when the size of them varies from the normal. If the grain is oversized or undersized the required amount per acre may be saved by setting the feed lever at a point slightly greater or slightly less than shown on the indicator. There are, in common use, two different forms of feeding devices. The fixed-cylinder-force feed, and the double-run-force feed. The amount of seed sown by the fixed-cylinder-force feed may be regulated by a lever which changes the size of the outlet, but it does not always handle all classes of seed without breaking them, as can be done with the double-run-force feed, which necessarily requires a disc wheel, or a cog wheel with from nine to fifteen sets of cogs that make as many speeds or feeds.

In the most efficient type of grain drill the seed should be driving it a disc wheel, or a cog wheel with from nine to fifteen sets of cogs that make as many speeds or feeds. In this method the disc is not run deeper than the seed is deposited, thus the draft is reduced to a minimum. If the seed is deposited in the rear of the centre of the axle, the rotation of the disc tends to carry earth and seed up with it, causing the seed to be unevenly deposited. In operation, a properly angled disc opens a trench about two inches wide. The falling seed strikes the concave side of the shield and the convex side of the disc, and is thus scattered evenly over the entire width of the trench.

Grain seed drills are divided into four kinds, according to the type of furrow-opener—the open delivery single disc and the closed delivery single disc, the double disc, the shoe, and the hoe drills. The open delivery single disc furrow opener deposits the seed between the shield and the convex side of the disc. The space between the end of the boot between the disc and shield to the bottom or lower end of the shield. The shield prevents the falling seed from becoming mixed with the loose earth and surface trash and insures its free passage to the bottom of the trench made by the disc. It will also do excellent work in highly cultivated soil that is free from trash.

The closed delivery single disc furrow opener has a closed boot, similar to a hoe furrow opener, which comes down at the rear edge of the disc and deposits the seed about two inches back of the disc. It does not plant the seed at as even a depth as either the open delivery single disc or the double disc, but does plant it eight inches in rear of the disc hub, and wherever it meets with an obstruction, rock or hard frozen soil the disc rises up and carries the boot with it, broadcasting the seed on the surface.

There are many styles of double discs, but the one that plants the seed under or slightly back of the disc axle, or hub, is the one to use, for that point is the deepest part of the furrow. The furrow opener that shoots the grain forward of this centre is to be avoided, for the reason that the seed reaches the ground before the furrow is fully formed, and it is, therefore, mixed with the soil as the seed trench is being made, causing what is termed "choking" or "clogging." The double disc type of opener tends to spread out the seed more than other kinds, so that each seed has a somewhat greater area from which to draw moisture.

The hoe furrow opener or shovel opener does not penetrate the ground readily and clogs easier than any of the other types. The shoe opener does no better work, and rather than clog will run over trash and thus plant the seed at varying depths. In selecting a drill the bearings should be given careful inspection. They should be dust proof. The hand roller must be considered superior to all others for this kind of work, as the oil can be forced into the bearing from the centre, and as it works out it carries all the dirt with it. It should have a well-braced seed box with steel hopper bottom to allow the seed to pass freely into the cups; strong frame and substantial wheels are important features. The distance between the furrow opener varies to some extent but six inches is the usual spacing. The seed tubes may be of rubber or of steel ribbon. The rubber tubes give good satisfaction, but are not durable if exposed to the weather. The steel ribbon tubes serve the purpose well, and if painted will last as long as the drill.—Jno. Evans, O. A. College, Guelph.

The cold and blustering weather kept the farmers away from the market today and there was a small attendance.

Nothing Like It For Bronchitis And Weak Throat

Remarkable Cures in the Worst Cases Reported Daily

CURES WITHOUT USING DRUGS

Doctors now advocate an entirely new method for treating bronchitis and irritable throat. Stomach doing is no longer necessary.

The most approved treatment consists of a healing vapor resembling the pure air of the Adirondacks.

This soothing vapor is full of germ-destroying substances, and at the same time is a powerful healing agent. It is sent to the bronchial tubes and lungs through a skillfully devised in haler that can be carried in the vest pocket. Simplicity itself is the keynote of this treatment.

CATTARHOZONE is the name of this wonderful in-vention that is daily curing chronic cases of weak throat, bronchitis and catarrh. Every breath through the inhaler is laden with soothing, healing substances that destroy all diseased conditions in the breathing organs, it can't fail to cure because it goes where the trouble really exists, and doesn't attempt to cure an illness in the head or throat by means of medicine taken into the stomach. Cattarhozone is a direct breathing scientific cure.

There is no sufferer from a grippy cold or any winter ill, that won't find a cure in Cattarhozone, which is employed by physicians, ministers, lawyers and public men throughout many foreign lands. Large size lasts two months and costs \$1.00 and is guaranteed; small size 50c, sample size 25c; all storekeepers and druggists, or the Cattarhozone Co., Kingston, Canada.

St. Joseph's Roman Catholic church at Buckingham, Que., was destroyed by fire.

John Whyte, President of the Whyte Packing Co. and the Stratford Brass Co., died at his home in Stratford.

Sir Adam Beck returned to London after three months' absence in England and was tendered a warm public welcome.

Growth Shows Desire To Extend Army Work

Commissioner W. J. Richards, chief of the Salvation Army in Eastern Canada, has completed his fifth year in that capacity. During that time the Army has seen one of its greatest periods of usefulness. This period takes in the "war years." The great war had been under way since August and new problems presented themselves to the organization when he assumed command. These problems required a large measure of initiative to overcome. The task of rendering the highest and most efficient service was shouldered and Canada paid tribute to the success which attended those efforts by over subscribing the amount asked for during the Red Shield Drive.

Commissioner Richards is a forceful man. He is a man of few words. He believes in doing things. During the five years, more than 11,000 persons are recorded as having sought salvation. Notwithstanding the losses due to war, there are today nearly 2,000 more names on the Membership Roll than there were in this territory five years ago.

In July, 1915, Canada East was separated from Canada West, the dividing line being Port Arthur. Even in view of this, there are now only forty-one fewer officers in active service in the Eastern territory alone than there were in the combined territories five years ago.

In the Field Report two very striking indications of financial growth are given. In 1914, the Self-Denial

HER CASE SEEMED HOPELESS

But "Fruit-a-lives" Brought Health and Strength

29 St. Ross St., Montreal.

"I am writing you to tell you that I owe my life to 'Fruit-a-lives'. This medicine relieved me when I had given up hope of ever being well."

I was a terrible sufferer from Dyspepsia—had suffered for years; and nothing I took did me any good. I read about "Fruit-a-lives" and tried them. After taking a few boxes of this wonderful medicine made from fruit juices, I am now entirely well!"

Madame ROSINA FOISIZ.
50c. a box, 6 for \$2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-lives Limited, Ottawa.

total for the combined territories was \$43,726. In 1919, for Canada East alone, it was \$75,591. Harvest Festival returns have been doubled.

Shows Solid Growth. In all the various departments the same rate of growth has been recorded. This shows that as often as humanly possible every opportunity has been seized for the advancement of every branch of the organization. Inasmuch as every act of service means the welfare of somebody, the position which the Salvation Army occupies today indicates tremendously increased service to the community.

This service has been rendered under the leadership of Commissioner W. J. Richards. His five years in Canada have been five big years for the Salvation Army in Canada, and give great promise for the future.

Two-party lines for residence telephones will be the general rule hereafter in portions of Ottawa and other parts of Canada.

PRESIDENT BEATTY ON Y. M. C. A. WORK

In a foreword to an attractive little pamphlet issued by the Railway Y.M.C.A. of Canada, Mr. E. W. Beatty, President of the C.P.R., pays a tribute to the work of this association.

"The high value of the work," says Mr. Beatty, "of the Young Men's Christian Association in the interests of men and boys has come to be generally and properly recognized, particularly on account of its efforts and accomplishments on behalf of our soldiers during the recent world war."

"Among the various spheres of the Association's activities not the least valuable is the work of the Railway Branches which minister to the intellectual, the social, the moral and the physical needs of railway men irrespective of race or creed."

"The inception of this work on the Canadian Pacific Railway dates back to 1906 when the building at Revelstoke, B.C., was erected, and so well satisfied were the Company's officers with the experiment tried there that 2 additional branch associations have since been established. These provide home sick care and comforts for men in train service which away from home and to many employees located at outlying points they afford the only home facilities that are available to them."

"It is not only that good meals and clean beds and baths are provided, but the educational advantages, the recreational facilities and the opportunities for social intercourse amidst wholesome surroundings must necessarily contribute to the well being of the men and benefit the community in which they live, and the Company with which they are employed."

"The eminently satisfactory results of this work on the Canadian Pacific lines in the past for which I desire to express my appreciation and appreciation, have without doubt been achieved through the earnest and cordial co-operation of the Company's employees with the Association's officers and staffs, and with the continuance of their united efforts the future success of the work can, I feel sure, be confidently entrusted to them."

"The Railway Y.M.C.A. provided 140,000 beds to railway men and served 325,000 meals in 1919. Its buildings are valued at \$580,000."

Always bears the Signature of *Chas. H. Fletcher*

WE ARE Ford Dealers in this district and have formed an estimate of the number of cars we will require to meet the needs of this territory. We cannot get enough cars to fill that estimate because there are not enough cars being made to fill all dealers' estimates throughout Canada.

The number of cars we can get depends upon the number of orders we send in and the early date at which we send them in, as the Ford Shipping Department follows the principle, "First Come, First Served."

Cars ordered now will not be delivered until March, and deliveries will be uncertain throughout the year. If you do not want to wait for summer or autumn delivery, come in and reserve your car by signing an order today.
