

each verification treaty will be supplemented by the habitual means by which countries verify compliance with agreements (national technical means).

It seems useful, however, particularly in the prevailing context of improved East-West relations, to reflect on other ways of creating a broadly favourable context for confidence-building and disarmament efforts.

In this context, the Open Skies concept has a very special value. The willingness of a country to be overflown is, in itself, a highly significant political act in that it demonstrates its availability to openness; aerial inspection also represents a particularly effective means of verification, along with the general transparency in military activities discussed above.

This double characteristic of an Open Skies regime would make it a valuable complement to current East-West endeavours, mainly in the context of the Vienna negotiations but also in relation to the other disarmament efforts (START, chemical weapons).

It would seem desirable to focus now on the European region, while also including the entire territories of the Soviet Union, the United States, and Canada. Accordingly, we will be ready to consider at an appropriate time the wish of any other European country to participate in the Open Skies regime. This element could be complementary to their efforts at confidence-building and conventional arms control and would conform to the objectives of those negotiations.

4. To this end, the Open Skies Regime should be based on the following guidelines:

- The commitment of the parties to greater transparency through aerial overflights of their entire national territory, in principle without other limitations than those imposed by flight safety or rules of international law.
- The possibility for the participants to carry out such observation flights on a national basis or jointly with their allies.
- The commitment of all parties to conduct and to receive such observation flights on the basis of national quotas.
