

and other citizens about how to change, and requires it to consider the interests of the public in assessing local, regional and national conflicts between energy and other uses of land. The challenge of a sustainable development strategy lies in how to reconcile competing needs against the principles of environmental protection and sustainable development.

A strategy can be implemented and maintained if it satisfies two criteria: it must be effective in achieving its purpose and it must be accepted by those who carry out the work and those who benefit from the results of the work so that they will be willing to support it over time. The challenge of a sustainable development strategy is about the relationship between the two criteria. It is important to have a strategy that is effective, but it must also be acceptable to those who carry out the work and those who benefit from the results of the work so that they will be willing to support it over time. The challenge of a sustainable development strategy is about the relationship between the two criteria.

III. Results

Background

There are two main types of environmental assessments in Canada: environmental impact assessments and environmental reviews. Environmental impact assessments are used to evaluate the potential effects of proposed projects on the environment, while environmental reviews are used to evaluate the potential effects of proposed projects on the environment.

The challenge of a sustainable development strategy is about the relationship between the two criteria. It is important to have a strategy that is effective, but it must also be acceptable to those who carry out the work and those who benefit from the results of the work so that they will be willing to support it over time. The challenge of a sustainable development strategy is about the relationship between the two criteria.
