

The preliminary elements obtained from these by Dr. King's graphic method were as follows:—

$$\begin{aligned}P &= 5.969 \text{ days} \\e &= .02 \\&\omega = 190^\circ \\K &= 49.5 \text{ km.} \\&\gamma = -17.5 \text{ km.} \\T &= 2,419,362.52 \text{ J. D.}\end{aligned}$$

A closer approximation to the curve was attempted by applying a least-squares solution. The period of oscillation was taken as fixed, being obtained by using both Lick and Ottawa observations, which being far apart, cover a great many cycles. On account of e being very small, T was also taken as fixed and e , ω , K , and γ used in the solution.

Observation equations were formed as in Table V.

TABLE V.
OBSERVATION EQUATIONS.

x	y	z	u	$-n$	Weight.
1	-.778	-.313	+.666	-.2.7	.3
1	-.395	+.595	+.930	-.0.9	1.5
1	+.140	+.991	+.991	-.1.1	2.0
1	+.630	+.317	+.763	-.1.7	1.5
1	+.959	-.832	+.210	+.0.3	1.5
1	+.980	-.995	-.032	-.0.1	2.0
1	+.647	-.073	-.741	+.1.4	2.5
1	+.152	+.863	-.982	+.1.4	2.0
1	-.309	+.917	-.953	-.0.7	2.0
1	-.728	+.176	-.702	+.0.8	1.0
1	-.980	-.734	-.277	-.1.0	2.0
1	-.1.013	-.851	+.122	+.0.3	2.0

$$\begin{aligned}\text{when } x &= \delta\gamma \\y &= \delta K \\z &= K\delta e \\u &= K\delta\omega\end{aligned}$$
