27 Wed.	6 44	5 42	12 13	8 19	1 50	6 49	Earthq. at Kingston, 1817.
28 Thur.	6 43	5 43	12 13	7 57	2 40	7 37	stormy.

Much of the success of the Wool grower depends upon the care and attention bestowed upon his sheep during winter months. Sheep are animals which pay their owners better for good care and keeping than any other stock usually kept upon a farm; but if fed with a stingy hand, or neglected, if suitable conveniences are wanting, they pay as poorly as any. The annual loss on this continent, for want of suitable sheds for the winter keep of sheep, is very great. The principal is sound, that warm enclosures are equivalent, to a certain extent, for food; and as a large proportion of food consumed in winter is required to maintain the animal heat, consequently in proportion as the shelter is good, within certain limits, the less food will be required.
