K. deals, p t, prompt.

Monday, June 27. Dear Sir—I beg to call your attention to the fact that postage stamps are frequently affixed to postage material by being moistened by the tongue; that the gummed surfaces, when so moistened, are most apt collectors of germs and dirt, and that when such stamps are used in the collection of stamps, they are apt to pass them on to purchasers. In this way there is not so much danger of gathering germs from the dispensing counters. The postmaster asks the vendors of stamps to follow the course advised by the health officer.

Following is the text of the letter sent to the postmaster: 171 Princess Street, St. John, N. B., June 25, 1910. Edward Sears, Esq., Postmaster, St. John (N. B.).

HAS DECLARED WAR ON GERMS

Dr. Melvin, Chief Health Officer, Takes Up Question of Postage Stamps

Writes to Postmaster Explains Great Danger in Moistening Stamps With the Tongue, and Tells How Vendors May Assist in Guarding Against Contagion—The Postmaster's Request.

The public meeting in the Opera House, Tuesday night, under the auspices of the Educational Institute of New Brunswick, was very largely attended, and excellent addresses were heard from Dr. J. H. Gray, Dr. G. G. Melvin and Dr. Thomas Walker, on the importance of properly safeguarding the school children from infectious diseases. The subject of the meeting was announced as School Sanitation and Medical Inspection, and it was dealt with in its various phases. Dr. Walker added a new touch to the proceedings by advocating some radical changes in the present mode of school management. He was opposed to children entering school until they were at least eight years of age. It was torture for them before that age. He also would have the teacher help the scholars more in school hours at home. They would not have as much work to do after they left the classroom. There should be more time for play. The meeting was called to order by Chief Superintendent Carter soon after 8:30 o'clock. He said that Dr. Melvin, who was unable to attend on account of illness, but addresses would be delivered by Dr. Gray and Dr. Melvin.

Dr. Gray, who was first called, said he would speak on the subject of the physical fits of children and some of the causes. He spoke of the hereditary influences caused by environment, and how they could be overcome by proper safeguards of the children. He touched on the preventable diseases and referred to the great loss of life from tuberculosis. It was most important that every care should be taken in cleaning the school rooms and halls, as many diseases were spread through them. After going into the matter at some length and pointing out how contagion was carried, he urged his hearers to exercise the utmost precaution in trying to prevent the spread of disease.

Dr. Melvin, after expressing his regret at the unavoidable absence of Dr. Melnerney, who had given the matter of Medical Inspection in the schools much attention, said he would do his best to do so. He said that he would do his best to do so. He said that he would do his best to do so.

The speaker referred to the influence of the mind over the body, in the adult, while in the child the body dominates the mind. That which the body was most important that the child should be healthy. In many cases diseases were the cause of stupidity in children, though some children, he said, would be stupid under any circumstances.

There were two methods of medical examination, one complete and the other incomplete. In the complete form all diseases and defects of the body were noted by the examiner. This was a capital scheme, but he thought it was a little too expensive for this province or this city to aim at. It would be good, no doubt, but it might be difficult to get, as it would be rather expensive and was, perhaps, not altogether necessary.

The other method took into consideration only the more common forms of contagious diseases, about thirteen in number. The medical examiner in these cases would see that the children were properly taken care of; to cure the diseases with which they were afflicted.

The teacher, by reason of being personally acquainted with the scholars, could render valuable assistance to the medical inspectors by notifying him of suspicious cases.

The inspector was supposed to answer every emergency call of a teacher. He made a cursory examination of every pupil and at least once a year personally examined every pupil.

The speaker then referred to some of the instructions given to teachers in connection with the operation of this scheme. The cost, he said, of such a scheme as outlined would be about fifteen to twenty cents per pupil.

In closing, Dr. Melvin commended the subject of an adequate medical inspection in the schools to their earnest consideration.

TELEPHONE REPORT DECLARES CHILDREN SHOULD NOT BE SENT TO SCHOOL UNTIL THEY ARE EIGHT YEARS OLD

Public Utilities Commissioners Decide They Have No Power UNDER THE ACT

Announce Formal Charges Must Be Made and Backed Up Before Action Can Be Taken—City Should Act Now, Say Some—Those Interested Greatly Surprised.

The public meeting in the Opera House, Tuesday night, under the auspices of the Educational Institute of New Brunswick, was very largely attended, and excellent addresses were heard from Dr. J. H. Gray, Dr. G. G. Melvin and Dr. Thomas Walker, on the importance of properly safeguarding the school children from infectious diseases. The subject of the meeting was announced as School Sanitation and Medical Inspection, and it was dealt with in its various phases. Dr. Walker added a new touch to the proceedings by advocating some radical changes in the present mode of school management. He was opposed to children entering school until they were at least eight years of age. It was torture for them before that age. He also would have the teacher help the scholars more in school hours at home. They would not have as much work to do after they left the classroom. There should be more time for play. The meeting was called to order by
