

## COUNTRY NOTES AND PRICES

## HASTINGS CO., ONT.

**ELDORADO**—Harvest is nearly finished. Threshing is just commencing. Hay was a much better crop than last year, but due to the fact that the weather has been in the country the price will be high. Oats and barley are short and light. Very little wheat was raised, and the wheat was a failure. Fall wheat was fair, as was also peas. Fruit seems fairly good, and corn is excellent. Other horse crops are fair. Cheese factories are not doing as well as usual, owing to many cows having been disposed of last winter. In many factories the yield of milk is about 75 per cent. of last year's run.—F. A. C.

**MADOC**—We are having very poor harvest weather. Harvesting is about half done. Threshing has commenced. The grain is not yielding very well. Wheat is yielding about 20 bushels an acre; barley about 27 bushels an acre, and oats from 30 to 35 bushels to the acre. No peas threshed as yet. Roots look much better than two weeks ago. Pastures are looking better also. Scotch sheep have been threshed yielding well. The cheese on the Madoc cheese board yesterday all sold at 12¢. Hogs are selling at \$6.00 live weight.

## VICTORIA CO., ONT.

**SOUTH VERULAM**—Harvest is nearly completed. The corn is growing very well. Some excellent crops of oats are being harvested, which give promise of a very heavy yield. The fall wheat was growing very well. What there was fairly good. The new threshing outfit purchased by the farmers of this section last fall, is again getting to work, and should have a very successful season. The farmers report that this method of owning their own outfit is a great saving factory. Each farmer pays for his own threshing at a fixed rate per hour, and the cost of repairing for the machine is fairly equalized.—C. F.

## DURHAM CO., ONT.

**JANETVILLE**—The harvest is all out. The crops on the whole have been normal. Oats in some places are light, and corn in other places is heavy. There is an exceptional crop. Potatoes are a failure in some places. If the weather keeps fine, the harvest will be over by the 22nd inst.—J. P.

## NORTHUMBERLAND CO., ONT.

**CAMPBELLFORD**—Barley is short. In the straw. It is also light in the grain. On the whole it is less than a third of a crop. Oats are a fair crop, but are more or less rusted. The early sown peas are very good. The later ones are useless. They possess a good growth of straw but are not filling properly. During the dry weather the cows went down in their milk considerably. Since the rain however they have come up something near their normal flow.—R. C. C.

## ONTARIO CO., ONT.

The farmers of Ontario county are to be congratulated upon the success of their efforts in attaining the highest of the Ontario Department of Agriculture at Whitby. The branch has been inaugurated, and J. H. Hare, B.A., is in charge. Mr. Hare will relate all farmers to call upon him. He will go all over the county and become acquainted with the farmers and learn the conditions prevailing in their district. His work will be to help farmers in every way within his power, and to solve the problems perplexing them. His skill and special information regarding agricultural matters is at their service. Farmers of Ontario county in Ontario county within possible reach of Whitby, should not fail to take the full advantage of the opportunity to be derived from having this office located in their midst.

## BRANT CO., ONT.

**PAIKLAND**—Hay was an average crop, nearly all of it was stored in good condition as we had very good hay weather during the early part of the season. Oats were extra heavy, and the wheat was killed off by the drought last year. Timothy was short. Wheat was only an average crop but in spite of the weather a considerable rain during harvest which damaged wheat considerably, especially white varieties. Red wheat sprouted very little. In a few places the white wheat

is so badly sprouted it will have to be used for feed. From 75c to 80c a bushel is being paid for new wheat, depending upon the quality. What is yielding from 30 to 40 bushels an acre, and will average about 27 bushels an acre. Barley was short in the straw, but was well allied. Oats also, and corn, and peas, and on the ground. They did not stool out as they usually do. The heads are large and the grain plump, but they are not so well. Early sown peas are heavily podded. One field threshed last week yielded 25 bushels an acre, and the other 30. As good. Some rye is grown, which is averaging about 25 bushels an acre. Harvest is nearly over with the exception of the old field of late sown oats or peas. Corn and root crops are looking fine just now, and are growing splendidly. Pastures are fair. Some farmers have rape or corn to supply any lack due to dry weather. There have been some very heavy thunderstorms this summer. Two barns have been destroyed by lightning, one in June and the other last week. There are some insurance companies that will not attempt to cover the loss. Land is being plowed and prepared for fall wheat. Some practical men are following, claiming that it pays.—L. T.

## WATERLOO CO., ONT.

**AYR**—Owing to recent rains and frequent showers since, the oat harvest has been considerably delayed, but not sufficient to cover the loss. Land is being plowed and prepared for fall wheat. Some practical men are following, claiming that it pays.—L. T.

## ELGIN CO., ONT.

**CORINTH**—After several weeks of very dry weather, the crops are rather unfavorable effect on spring crops, the drought has been succeeded by a period of rain, which has been very beneficial every day for the past week. This will benefit the pastures, which were getting pretty short. The corn is in the ear. Oat harvest is nearly over. The recent rains have caught quite a number of the crops. The wheat is in the ear. The crop is beginning to grow in the straw. Taken altogether the crops will be about average. The milk supply is decreasing, but will be connected by the advanced price, which is likely to be still higher. At the time of writing (Aug. 27), the local factories have been offering 17¢. Butter, 26¢; wheat, old or new, is quoted at 80¢ to 85¢; oats, 45¢ to 48¢; barley, 50¢ to 60¢; and corn, 50¢ to 55¢. At \$15 to \$18 a ton in bulk; hogs, \$20 to \$21 a ton in bulk.—J. H. M.

## WEST ASEA, ASK.

**COTTONWOOD**—Up to the middle of June, continuous rain, and bumper crop. A dry spell then set in which lasted until last week, when several showers passed over the country. The crops are now steady rain. It is rather late in the wheat, but it will help the oats and garden crops. Several farmers are cutting grass. The wheat is intended to cut wheat this week. They will start if the weather permits. The wheat is ripening. The grass is good. We fear frost at any time now. We have had little hail. One storm did damage near Hastings. The conditions prevailing in the calm weather. On the whole we expect a good crop although not a heavy one.—B. J.

## GOSSIP

Mr. George Bennett, Charing Cross, who had appeared in this issue, is an up-to-date breeder and importer of Chester White hogs. He has been in Ontario, Turkey, Toulouse, Gens, Pekin, Ducks, Light Brahmas, Indrag, Games, White Wyandottes, and other breeds. Mr. Bennett, Brights, Golden and Black Red Game fowls are also to be found on this farm. The hogs are one of the best herds of Chester Whites in the country, and that there is in America. Pigs from this herd will give a good account of themselves wherever they are sent. The best of the Chester flock is of the best. It is found with Maple Lodge, A. and W. Whitehead's, and the best of the Chester flock is of the best. From this farm were shown at the Provincial Fair, Guelph, last winter. They carried away a goodly share of the ribbons, both for Chester hogs. Leicester

sheep, and poultry. When wanting anything in the above line drop a line to Charing Cross, mentioning this paper. You will be sure to get the stock from this place at a reasonable price.

## D. A. GRAHAM.

Lochaber Stock Farm is situated in Lambton Co., Ont., about a mile from Wandsworth. It is now owned by D. A. Graham, formerly of Parkhill, Ont. Mr. Graham's purebred stock comprises Shorthorns, Leicesters and Berkshires, as well as M. H. Turkeys, and a few other breeds. In Shorthorn breeding, Mr. Graham gives the milking qualities due attention. Nobility, but the best sires are retained. The sire at the head of the herd is Lord Blossom, by Lord Mistletoe, imp. from Duthie, Collyria, dam Parma Blossom, imp. Scotch Red. Lord Blossom is not only a good individual but has several of the best sires in Scotland connected with his pedigree. The Berkshire herd is headed by Royal Kingston, imp. bred by C. C. Smith, Kingston, Ont., and sired by Triumph, from the Teasdale herd. These are producing up-to-date Berkshires. The Leicesters are also a fine breed. The foundation was selected from the well-known Maple Lodge flock, which practically was a purebred for several years. Knobs 772, the flock leader, is by Winchester E, imp. dam by the noted sire of the breeding ewes (bred by Jas. Beall, Clinton, Ont.) were sired by Elora Boy 478—the 2nd ram, lat. winner at London in 1906. With such a combination of choice blood, lambs from this flock should meet with ready sale. We bespeak for Mr. Graham a show of your trade knowing that he can supply your wants.

## LOW PRICED ROOFS.

Some ready roofings have so little protective quality of their own that they require painting every year, although they are better graded than can be let as long as three years without this protection.

The cheapest way out of the difficulty is to buy a roofing which needs no painting whatever. Such a roofing is Amattite, which our readers will find frequently advertised in these columns.

The mineral surface of this material seals the roof against all factors of the weather holdy. Rain, snow and wind have no effect whatever upon it, and it will give good service year after year in the most extreme exposures without any care or attention.

A sample of Amattite can be obtained by requesting name on postal card addressed to the nearest office of the Paterson Manufacturing Co., Limited, Toronto, Montreal, Winnipeg, St. John, N. B., Halifax, N. S.

A splendid programme of special attractions will be carried out before the grand event every afternoon at the Central Canada Fair this year. The list includes a gorgeous leap from the dizzy heights of 100 feet into the tank of water. This will be performed by the noted Holten. In his leap Holten turns a complete back somersault, and in the same performance will give his thrilling death trap loop. The rider's only chance of success in this feat lies in the rapidity of the drop. Working of the huge trap door that permits him to leave the inclined loop while lying on the ground. He has electrified thousands, and his life is in every trial.

The management of the Canadian National Exhibition is to engage the Citizens' Band of Winnipeg, Man. This band will come to Toronto strong. They are in the hands of A. W. Bell, formerly assistant manager of the Toronto Exhibition, and at present manager of the Winnipeg Exhibition. The band of the Citizens' Band of Winnipeg is playing at the recent exhibition in its home town.

ABSORBINE is a remedy that can be depended upon to work without irritating or removing the hair, and hence can be used. As an illustration, Mr. Jos. Crocker, Kingston, Ont., has a large bunch on book joint, and realizing that this blenheim decreased the cow's value, he purchased a bottle of ABSORBINE at \$2.00, and says there is not a blenheim to be seen on her now, and that the cow is worth \$50.00 more than she was before using ABSORBINE.

## HOLSTEIN FRIESIAN NEWS

The Canadian Dairyman and Farming World is the official organ of the Canadian Holstein-Friesian Association, all of whose members are readers of this paper. Members of the Association are invited to send in their names and names of their best breeders for publication in this column.

It is now conceded by all leading physicians, and more intelligent persons that Holstein milk is the most beautiful, being yielded by a large, strong and vigorous race of cattle that possess great vitality, and the milk being of a make-up so like that of human milk, constitutes it the ideal food for infants, invalids, and young persons, and especially for those whose diet is largely composed of milk. The literary committee of the Holstein-Friesian Association of America believes that much good can be done for Holstein-Friesian interests by directing the attention of the public to the best cattle to these points regarding Holstein milk. Holstein milk is easily digested and can be assimilated by the most delicate stomachs.

In view of these well established facts, it is the duty of this committee that every individual owner of Holsteins be invited to co-operate with the Association in the work of making more widely known the fact that Holstein is the most beautiful and nutritious, and therefore the best of all milks. In order to do this it is suggested:

That those engaged in selling either at wholesale or retail, always state the fact that it is Holstein milk, the most beautiful, the most nutritious, the most healthful and nutritious. That all cans or bottles, kegs, wagons, stationary or printed matter used in connection with the business, bear the words, "Holstein Milk, the most healthful and nutritious." That persons selling or retailing connect with them the fact that such milk is the most beautiful and advertised as Holstein milk; and particularly in the case of hotels, restaurants and public houses, to order "Holstein Milk," shall be placed on the menu, bill of fare, or show cards used. That all persons who are engaged in the milk, always ask for, and insist upon having, if possible, Holstein milk. It is believed that the general adoption of these ideas by all interested in Holsteins, together with other extensive plans about to be carried out, will result in a great demand for Holstein milk will secure a wide recognition of the merits of the milk, and will result in a great increase in the number of Holsteins in America to its utmost to tax every breeding cattle, and simultaneously increase the selling price to the great advantage and prosperity of all concerned. The committee therefore urges your hearty co-operation for movement.—F. L. Houghton, secretary.
