LIGHT AND WATER.

The ratepayers of Rossland are desirous of having a light and water service at the lowest possible cost. The prevailing opinion is that the present charges are unreasonably high and that it is the duty of the city council to forthwith give the matter its serious consideration with a view of arranging for its satisfactory settlement.

We do not doubt that the members of the council will do their best for the public welfare in this instance. They are, however, confronted by a very important and complex question, and unless extraordinary care is exercised, a bad bargain may be made by the muni-

cipality. At present 'Rossland is supplied with water by a local company which also operates the electric lighting system. This company, by the terms of its charter, controls a limited amount of the water tributary to the city, the balance being claimed by the municipality and a number of private corporations. Before the council enters into any arrangement for supplying the ratepayers with water, it is absolutely essential that the most complete, authentic information be obtained as to the respective ownerships of the water rights of the camp. If it is discovered that the city is entitled to sufficient water to supply both the municipality and the ratepayers, an estimate of the cost of installing mining camps, where the business the system now in use. It may be, than the plant now offered for sale to ever, in order to bring out their intrinsic the council. In other words, the council worth. must not purchase the plant of the local

be advisable for the city to assume the inception of the camp council. THE MINER hopes is that and calls for knowledge, skill and the cost of electric light and water experience. works for Rossland will be reduced to the lowest notch in order that the indebtedness of the city may be kept down, that low taxes will prevail, and last but not least, that the ratepayers may obtain light and water at a much

less cost than is the case at present.

PATRONIZE HOME INDUSTRY. will tell the story of the greatness of the well written and has covered the ground that were delivered at the luncheon the Coast people with regard to oprecently given in this city in honor of His Excellency, the Governor General. how they should be embraced. Referring It is the intention of those who are to the South and East Yale districts, to make it an artistic and generally high Okanagan camps, the article says it class production, and it is expected that would be lamentable shame if the Coast an edition of 5,000 copies will be printed. cities do not make a determined effort to The scheme has been endorsed by the secure a large share of the already great council of the board of trade and it is and rapidly growing trade of that region, intended that the cost of publishing the and asks if "we are to have a repetition book shall be defrayed by public sub- of what has occurred in Kootenay. scription. This book can, in our opinion. be produced as well in Rossland as elseing home industries whenever possible.

THE RISE IN VIRGINIA.

ginia is unprecedented in the annals of say concerning them. To conclude, they the Rossland camp. The rise is justified by the worth of the strike and the pros- progressive people, and if the future pects of the Virginia, which promises to be does not turn out in such reseate hue as one of the leading mines of Trail Creek. Where the investors and speculators in citizens. the camp where mining property is situated and the men who are working in a property invest in the shares of such property it may be taken as good evi nounced to the public.

There will be considerable money made in the shares of the company before the present flurry is over by the expansion in price, but now that a big body of or of a shipping quality has been found the shares will not go back to the prices that attained before the find was made When the maximum price is reached there may, perhaps, be a slight slump but the recession will be small because of the intrinsic merit of the property, or which the value of the shares is based

The effect of adding another shipping mine to the list, as the Virginia will soon be, will be of great benefit to the camp. There is an aid that will result in far greater advantage to the camp than this, and that is its moral effect. It will encourage those who have properties here to develop them along lines similar to those followed in the case of the Virginia and others of the mines of meri here. The owners will now feel more confident that they will find values they go to a proper depth and there will be no more vain searching for valuable finds of mineral within a few feet of the surface. Perpendicular shafts will sunk to a depth of from 300 to 500 feet and then crosscuts will be run to find the ore bodies. It is patent that the values and permanent ore bodies are found at considerable distance below the surface. There is only one way to mine in this or any other camp and tha is the proper way. The very best known methods that attain in the older an adequate municipal waterworks sys- successfully carried on, are none too tem should then be procured and com- good for this camp. There are too many pared with the cost and advantages of cases of slipshod methods of mining on unconventional lines, which have however, that the city owns certain variably resulted in failure, for any more water rights which are, nevertheless, of this alleged mining to be carried on insufficient for the present or future now, unless failure is courted. Let the need of Rossland. Should this be owners of meritorious prospects in this proven it would then be manifestly the camp new take new heart and remember duty of the council to see if there are the proverb that "there are just as good other water rights in the neighborhood fish in the sea as ever were caught," and that could be secured and used in con- that there are, perhaps, many Virginias nection with the supply already con- in the Trail Creek division. They must trolled by the city to better advantage be developed in a proper manner, how-

There are many people who mistakenwater company if it can install one for ly imagine than anyone can successfully operate a mining property. This is a Another important point is the value grievous mistake. It takes years of exof the property offered for sale by the perience and as much, if not more, skill Light and Power company. Is the to make a successful miner than it does plant in its entirety worth \$85,000? to make a good civil engineer or a first What is included in the offer? Are any class lawyer or physician. This fact or all the holdings of the company should be taken into consideration when needed by the city? Can the city in- a man is to be selected in the future to stall its own electric lighting and take charge of the development of a water systems cheaper than it can mining property. If this fact had been purchase those now in use? Would it taken into consideration from the Rossland Light and Water company's mining men, instead of farmers, cooks contract with the West Kootenay Power and butchers, placed in charge of prop-& Light company for the supply of elec- erties there would be more paying mines tricity? These and many other points here than there are, for mining is not require the most careful attention of the only a science but it is also a profession

Incredible as it may seem a Victoria columns long, from the pen of W. general effect would be of the greatest There is a movement on foot to have Oliphant Bell, a New Zealander of some published an illustrated pamphlet that experience in mining. The Miner believes in patronize can be found anywhere in Canada Thoroughly imbued with a sense of their significance, without being offensive, cosmopolitan, free and unconventional they are convinced that Rossland has permanence and expansion before it possess all the elements which are necessary to the developing of a self-reliant, would seem to be now apparent, it will certainly not be the fault of Rossland's

SIX months ago THE MINER prophesied that there would be general prosperity and that business would be rushing in dence of its value. There are seldom Rossland this autumn. It is now only keener judges of the merits of a mine midsummer and the condition referred

THE GREAT WAR EAGLE.

The fact that the War Eagle will, as soon as its new hoisting machinery is installed, begin the payment of dividends at the rate of three cents per share per month will be hailed with delight by both the holders of the shares of that company, and those who are interested in the walfare of the camp. This company has been paying dividends at the rate of one and a half cents per share each month. This was \$30,000 per month on the capitalization of \$2,000,-000. The proposed new dividend will be at the rate of \$60,000 per month or \$720,-000 per year. Figuring it down to percentage, it is 36 per cent per annum on capitalization of \$2,000,000, and a share is the price that a majority of the shareholders have paid for their holdings. The stock, however, is worth from \$1.60 to \$1.65 more than par, but even at this figure the dividends of three per cent per month would represent a large interest on the money invested. It is admitted that even with the present fine development of the War Eagle mine that there are still large in this matter areas of unexplored ground available and the full possibilities of the property are not yet known or realized. The deepest workings are only 650 feet, and it has been demonstrated that successful mining can be carried on to a depth of at least 5,000 feet; therefore, it is palpable that only a small section of the possibilities are very great. To those who consider the ore in sight and the to the paper. potentialities which are as near certainproperly opened goes on paying divi- council,

THE MINER'S Map of Rossland is now

How It Manages to Crowd Out Its Opponents.

He Brought in Beef and Began to Compete With the Trust and the Latter Raised the Price of Mutton and So Ran Him Out of Business.

The meat business of Rossland has some exceedingly interesting, not to say peculiar features connected with it. Nominally the selling of meat is an industry in which any man who choses may engage with as much freedom as he can carry on any other legitimate pursuit; actually, however, the butcher business here is absolutely in the hands of a trust that relentlessly kills whatever could have made King William of Prus- opposition may arise. It is financial

outcher of Calgary. The local market out. In a business way Mr. Burns holds

C. E. Farquarson is the latest man to go against the buzz saw. He knows better now. Mr. Farquarson, who is a butcher by trade, several weeks ago conceived the idea of buying cattle on the Colville reservation, driving them here to be dressed and then disposing of the beef wholesale to the hotel men of the city, who previously had been powerless in the hands of the trust. Mr. Farquarson know that he could bring the cattle in here, pay duty on them and sell the beefat a long discount under the prices demanded by the trust, while there would still be a good profit in the It was an excellent idea, but it failed.

He reckoned without the trust. The hotel men had been paying 14c. a pound to the trust for hind quarters. Mr. Farquarson promptly offered to sell the same quarters for 11c. per pound, or if a whole side of beef were bought, it was sold at 10c. With such a reduction in prices as this he soon secured more trade than he could handle. The hotel men were delighted with their release from the prices they had been compelled to pay; the customers got better steaks than ever; Mr. Farquarson was making money. Everybody was satisfied with the exception of the trust, and it bided

A Clever Manœuyre.

Farquarson might have been frozen out by his opponents cutting prices so vertical shaft and discarding the ladder low that he could not possibly meet except in case of necessity, the amount them, but that would mean a loss, and proposed increase in dividends is going the municipality of Rossland owning saved in wages annually, reckoning a the trust decided on another means, by to be of great help to the camp. Three and operating a system of electric light- saving of one hour per man per day, with which not only was Farquarson crowded out but his customers were made to pay amount to the nice, respectable sum of for the crowding. It was a clever plan.

Farquarson limited himself to handling beef. He made no effort at marketing either mutton or pork, and the hotel men who bought beet from him contin-[The White Bear is not the only prop- | ued to buy their mutton from the trust shops, at the rate of 12½ cents per ound by the side. The market men paid Burns 11 cents a pound for the same

Hotels Compelled to Use Mutton. The hotels had to have mutton and ing beef from the embryo rival of the

to sell at all. The only alternative offered was that the hotel men should promptly return to the trust and pay three cents more for beef than was being paid Farquarson. On this condition the Burns butchers would sell them mutton at 12% cents per pound, instead of 18 mutton is used, it is evident that on this scale the profit to the butchers from the beef would be the same as if they maintained mutton at 18 cents a pound.

Hotel Men Abandoned Farquarson. There was but one thing for the hotel men to do; they abandoned all dealings with Farquarson, returned to the trust, and are now paying the old trust prices. As for Mr. Farquarson, having gone against the buzz saw. he knows better
