

THE TYPEWRITING RECORD BROKEN

Woman Writes 23,000 Words in Departmental Day at Washington.

Washington, D. C., Oct. 7.—During the past thirteen months the efficiency of the copying force of the United States patent office has been doubled by a system of competition among the high-speed clerks, which has incidentally produced several stenographers capable of doing world-beating work at the typewriting machine. Until a short time ago each typewriter was required to copy 5,000 words a day, and this standard had been maintained in the office for years.

The standard has now been increased to 10,000 words of copying a day, consisting of seven hours, and at a pinch more than twice this amount of work can be done. The speed of the typewriter girls in the patent office has passed all bounds, and the rapidity with which they have learned to manipulate the keyboard has been commented upon abroad.

On Sept. 15 Miss Olive R. Cameron, of Tennessee, copied in seven hours 22,000 words and broke the world's record, which up to that time had been held by Miss Mary E. Pretty, of Philadelphia, with 22,000 words to her credit. Miss Cameron's feat was recorded in a letter of commendation from Mr. Charles M. Trehan, chief clerk of the patent office, and congratulations from the commissioner of patents.

On Sept. 14 a hurry order came into the office from a firm of lawyers who had to have at once a copy of a long specification consisting of 23,000 words. The specification was needed in a law case being tried. To Miss Cameron the work was given. She finished the job in one day, and in recognition of her unequalled performance she was given a promotion, although it is stated that the young woman stands second on the list in the office, and that the advancement would have been hers in any event.

Miss Cameron received the following letter in acknowledgment of her achievement:

Sept. 15, 1904.
Miss Cameron—I congratulate you upon the work you accomplished yesterday in copying the office record. Twenty-three thousand words in one day breaks all previous records. The commissioner was also much gratified at your remarkable effort, and we were both pleased to learn that the work was not only rapidly, but accurately done. Very respectfully,
C. M. TREHAN,
Chief Clerk.

MOLTEN MONSTER CHASES TROLLEY

A Furnace on Wheels Dashes Down Hill—Passengers Leap for Life.

New York, Oct. 7.—After a wild ride down a steep grade in Clinton avenue, Newark, for a quarter of a mile, ten passengers had to jump for their lives last night from a trolley car traveling at great speed.

They had become panic-stricken at the sight of a molten blast furnace on wheels, filled with fire and molten metal, which was racing down the hill behind their car. Five horses were attached to it, but the fire and the heat had gained such momentum after passing the brow of the hill at Osborne terrace, that they were unable to stop, and were running for their lives and were merely managed to keep ahead of it.

Shouts from persons on the sidewalk drew the attention of those in the car to their danger and the motorman put on full speed. The big furnace gained ground every instant, however, and all made the dangerous jump except the motorman, conductor and two women. The two latter fainted.

Alderman William Pennington, who has just recovered from a broken leg, sustained in a trolley accident, was the first to jump. He and the others rolled over in the street, but none was seriously injured. When it seemed that the car would be overtaken, the traveling furnace severed from its course at Chadwick avenue and crashed into a trolley car bound for the city, and in reaction, the motorman, who had tried desperately to avert the collision.

The five horses pulled the car down in a heap, but they escaped serious injury. The car was wrecked and part of the traveling furnace smashed.

Trunks, suit cases, hand-bags, shoes, rubbers, etc. of the best quality, at lowest prices, can be procured at W. B. Lawson's, 128 Dundas street.

Insure Your "Specs."

New York, Oct. 7.—The latest venture in the insurance business is the advent of the Eyeless Protective Association. This concern has been organized in lower Fifth avenue. Its incorporators are New York and Brooklyn men. The association insures all kinds of eyeglasses and spectacles. One dollar a year is the fee, and the company guarantees to keep the glasses in repair and have a duplicate pair made in case they are lost or broken beyond repair.

Going for Chamberlain's Colic, Cholera and Diarrhoea Remedy.

Don't put yourself in this man's place, but keep a bottle of this remedy in your home. There is nothing so good for Colic, Cholera, Malaria, Dysentery and Diarrhoea. It is equally valuable for Summer Complaint and Cholera Infantum and has saved the lives of more children than any other medicine in use. When reduced with water and sweetened it is pleasant to take.

You, or some one of your family, are sure to need this remedy sooner or later and when that time comes you will need it badly; you will need it quickly. Why not buy it now and be prepared for such an emergency? Price, 30 cents.

SHOOTS HER TWO SISTERS

Little Girl Did Not Know the Gun Was Loaded.

Greensburg, Pa., Oct. 7.—Elizabeth, the seven-year-old daughter of John Galtsof, of Mount Pleasant, yesterday morning shot and instantly killed her sister, Mary, 12 years old, and probably fatally injured another sister, Emma, 6 years old. The children were left alone in the house. The father is a bricklayer on the Baltimore and Ohio Railroad and the mother a patient in Mercy Hospital, Pittsburgh. Not knowing the gun was loaded Elizabeth pointed it at her sisters and pulled the trigger.

MOSQUITO EXHIBIT AT WORLD'S FAIR

A Very Aggressive Aggregation of Jersey Stingers.

FAMOUS FOR THEIR INDUSTRY

Methods for the Eradication of These Pests—A Remedy for Their Bites.

St. Louis, Oct. 7.—About the center of the building devoted to forestry, fish and game is a circular case containing one of the most curious exhibits in the entire exposition. It is furnished by the State of New Jersey, and illustrates the life, character and achievements of the mosquito, which as everybody knows, is one of the notable products of the summer.

It is the first time the mosquito ever appeared officially at an international exposition. I do not quite understand why he should be classified with forestry, fish and game. It would be more appropriate to put him in the varied industries building, because he is famous for his industry, and applies it in various ways and directions. But, as he has entered no protest, we may assume that he is satisfied with his place, and everybody can learn a valuable lesson from him.

The purpose of the exhibit is plain, and it is not only useful, but very important, since it has been demonstrated that he is of all insects the most dangerous as a distributor of disease. So dangerous is he regarded by medical science that large sums of money are now being expended on the Atlantic coast and elsewhere for his extermination. Indeed, some doctors assert that the mosquito is entirely responsible for what are called malarial diseases, and the investigation of the army surgeons in Cuba have shown that he is the most

agency in spreading yellow fever as an epidemic. It is therefore proposed that the medical authorities of New Jersey should make an exhibit and show the people of other states what is being done to remove the pest and protect the public against it.

HISTORY OF EACH.

We learn from the exhibit that there are several kinds of mosquitoes, and they are shown in a most intelligent and comprehensive manner. The installation is admirable, and then every object is accompanied by a detailed explanation plainly written upon a card which enhances the value of the exhibit a hundredfold. We have not only different kinds of mosquitoes impaled upon pins, but we have the life history of each one, and you will be surprised to know there are so many varieties. Some of them grow and some are silent. Perhaps you have discovered that fact by personal experience. Some are deadly, others are not, but all are loaded with poison, and the malarial distributor is a particular kind of insect which does the greatest damage. It would be difficult for anyone to explain the reason of his creation. One of the most interesting features of the exhibit is the model of a marsh, a bit of swamp land similar to that which exists along the Atlantic coast, and often in the interior of the country, in which mosquitoes are produced and developed under the most favorable circumstances, and in it we are shown how they are born and live and die. In the same way we are taught the methods of exterminating the insect, and are shown how such marshes can be reclaimed and the evils produced by them entirely eradicated. The means and methods adopted in New Jersey for the extermination of mosquitoes are said to have been more successful than in any of the other states. A large amount of money has been expended for that purpose, and science has shown its greatest skill and used its best endeavors with the greatest success. Different means are necessary in different places. No single rule applies to all localities, and there is a very important lesson to be learned from the exhibit in natural history that is presented here.

REMEDY FOR BITES.

To the general public, to the sufferer from the mosquito bite, the collection of antidotes and the instructions as to their use are particularly valuable, and everybody ought to know that the New Jersey scientists recommend aqua ammonia and a wash made of carbonate of soda as the best remedies for mosquito bites. The frequent application of these solutions will neutralize the poison and reduce inflammation more promptly than anything else.

Every farmer's wife and every householder in villages that are suffering from this exhibit that mosquitoes can be exterminated by pouring crude petroleum into all pools of stagnant water in the neighborhood, and into barrels that are kept to receive the rain water from the roofs of their barns and houses. Stagnant water is necessary for the production of mosquitoes. A little will produce a great many. A few inches in the bottom of a barrel is enough, but the remedy is simple and effective. Get rid of all the stagnant water in your neighborhood, and if you cannot get rid of it cover the surface with crude petroleum.

Dr. L. O. Howard, the entomologist in charge of the department of agriculture, has another very interesting mosquito exhibit in the Government building, but it is not as large or as much in detail as that of New Jersey.

There are many other curious exhibits in the exposition, but it is a catalogue of them, but it is as big as a city directory and contains 10,000 paragraphs. What he needs more than anything else is an abridgement that will tell people what are the most interesting things to see and where they can be found.

JILTED WOMAN AWARDED \$5,000

Nearly 100 of Defendant's Love Letters in Court—Full of Fond Words.

Kingston, N. Y., Oct. 7.—Five thousand dollars is the amount that an Ulster County jury considers proper for a woman of 25 years to receive when the man who promises to marry her changes his mind.

Miss Dubois first met Wright at a dance at Brink's Hotel in West Hurley. In December, 1901, Wright asked her to become his wife, and she consented. The wedding day was fixed for Christmas day the following year. A few months later Wright began writing endearing letters to his sweetheart. Although the wedding day was yet months away, he had begun to plan for house-keeping. He wrote regularly once a week, sometimes often. Invariably he commenced his epistles "My True Love" and concluded "Your True Love."

In one of his letters Wright spoke of a disagreement in a family with whom he lived, and he wrote that he would send you a photograph and look at it and hope that when we are married we will never disagree. "Some get married for money and some for the name," he wrote the following week, "but I won't do either. I'll do it because of the woman I love."

On Dec. 7 Wright intimated that he thought it better to postpone the ceremony until after the holidays. He wrote Christmas he arrived at West Hurley and remained there a week. They agreed to postpone the wedding until April 1. With Wright's return to Syracuse his letters stopped and Miss Dubois wrote him three letters. Her mother also wrote to him. He answered that he did not like the style of either letter and so he would close his last letter to her. Later Miss Dubois said she heard he had married another girl, Judge Cochrane, before whom the case was tried. Wright had said that he must find a verdict for Miss Dubois. Wright had made no defense. Miss Dubois' suit was for \$10,000, after being out ten minutes the jury awarded her half that amount.

KILLED, DROWNED HANGED, LIVES

"The Human Football's" Latest Mishap Was to Fall From a Bridge.

Torrington, Conn., Oct. 7.—The rapid recovery of Thomas Cahill, who was taken to Litchfield Hospital at Winsted a week ago, is pronounced one of the most remarkable on record.

While he had fallen 25 feet from a bridge striking his head on a rock in Naugatuck River, his body rolled into the stream and for some minutes he floated. Some of them said he was a swimmer. While being drawn up the rope as he had been hanging from a tree, within a few days he had recovered his senses and was able to walk.

When he was taken unconscious to a small shop an old woman asked, "What's wrong?" A small child replied, "It's a dead man. He was killed, drowned and hung." "Umph!" said the woman, "It's Tom Cahill. He's dead. He's vowed to live a hundred years."

Cahill came to Torrington because Litchfield is a "dry town." While lying in a hospital at Center bridge he fell into the river. A man went to his aid and a rope was placed under Cahill's arms. In drawing him up, the rope slipped around his neck.

The police station was found that he had a cut on his head and a gash behind his left ear. His body was badly bruised and he had swallowed foul water. A physician dressed his wounds and he was removed to the hospital.

Cahill is a local celebrity known as the possessor of a talisman against death. He is called "The Iron Man" and "The Human Football." Twelve years ago a huge stone dropped from a derrick, crushing his right leg and foot. Later he fell from a load of stone and a wheel of the wagon passed over his jaw. This only cured his speech, as he had been tongue-tied. Three years ago he fell from a ladder, breaking his collar bone and fracturing his right arm. Last winter he cut the instep of his left foot while chopping wood.

Cahill is about forty years of age, is married, and is a mason's helper.

Mrs. Winslow's Soothing Syrup has been used for over FIFTY YEARS by MILLIONS OF MOTHERS for their CHILDREN WHILE TEETHING, FOR COLIC, SOOTHES THE GUMS, ALLAYS ALL PAIN, CURES WIND COLIC, and is the best remedy for DIARRHOEA. Sold by druggists in every part of the world. Be sure and ask for "Mrs. Winslow's."

A new invention is the manufacture from ramie grass of cloth, dress goods, ropes and other articles. "THIS A MARVELOUS THING." When the cures effected by Dr. Thomas' Electric Oil are considered, the speedy and permanent relief it has brought to suffering wherever it has been used, it must be regarded as a marvelous thing.

Emperor William of Germany certainly shows versatility in his designing. At the recent wedding of the daughter of the British ambassador in Berlin he presented the bride with a porcelain table clock made from a model that he had designed. Another porcelain gift from the royal family was a flower bowl sent by the Crown Prince of Germany.

DO NOT DELAY.—Do not let a cold or cough fasten upon you, as it will if neglected. Do not let a cold or cough fasten upon you, as it will if neglected. Do not let a cold or cough fasten upon you, as it will if neglected. Do not let a cold or cough fasten upon you, as it will if neglected. Do not let a cold or cough fasten upon you, as it will if neglected.

RHODES SCHOLARSHIPS

Rev. W. H. Vincent's Son Awarded One—Next Examinations.

Windsor, Ont., Oct. 7.—George C. Vincent, son of Rev. W. H. Vincent, a former pastor of the United Presbyterian Church, Detroit, has been awarded a Cecil Rhodes scholarship to Oxford. Mr. Vincent was graduated from the Detroit Central High School class of 1901 as president of his class.

New York, Oct. 7.—Dr. George R. Parkin, representing the trustees of the Cecil Rhodes estate, has given notice that the next qualifying examinations for the Rhodes scholarships in the various states will be held about the middle of January, 1905. The examinations of January, 1905, will be conducted on lines similar to those followed in March, 1904.

Withdraws His Application
Ottawa, Oct. 7.—The Auditor-General has withdrawn his application for superannuation. When seen by a reporter, Mr. McDougall said: "Yes, it is true that I have withdrawn my application for superannuation. What really has actuated me in so doing is that the subject of my difference with the Government is now before the electors of Canada, and they will say, either directly or indirectly, whether I was right in holding that the act should be submitted to a committee of Parliament to determine what, if any, changes should be made in the measure."

Bank Robbery.
Montreal, Oct. 7.—The Terrebonne branch of the Provincial Bank of Canada, which is in the office of Notary Methien, was robbed of money and securities to the amount of \$1,800 last night. The safe was blown open.

Washington, Oct. 7.—It has been decided that the United States Government will not at this time intervene in the administration of affairs there. It is felt that not a sufficient cause has been shown for intervention.

Sells, Showman, Dead.
Columbus, O., Oct. 7.—Peter Sells, the showman, died here last night of apoplexy, aged 55 years. He, with his brothers, established the Sells Bros' shows in 1872, and he had been in the show business continuously since.

Was a Toronto Graduate.
Chicago, Oct. 7.—The executive committee of the trustees of the Northwestern University, have announced the election of Dean Thomas F. Holgate to be acting president of the institution. Professor Holgate has been identified with the Northwestern since 1893. He was graduated from Toronto University in 1884.

Chamberlain's Cough Remedy.
This is a medicine of great worth and merit. Try it when you have a cough or cold, and you will be pleased with the quick relief which it affords. It is pleasant to take and can always be depended upon. For sale by all druggists.

Trunk-Stealing Charged.
Toronto, Oct. 7.—William Plewes, an employee of a department store, was charged in the police court with stealing a trunk and contents, valued at \$175, from the store of J. A. Ingram, president member for East Elgin. It is alleged that Plewes threw the trunk aboard a wagon with others, and it fell to the ground. He was remanded till the 11th inst.

SPECIAL NOTICE.—Radiant Home stoves, cook stoves, parlor and heating stoves, feather pillows, mattresses, wire, springs, extension tables, dining chairs, brass and iron bedsteads, at the Feather Bed and Mattress Cleaning Factory, 503 Richmond street. Telephone 309. J. F. HUNT & SONS.

TO PREVENT IT BETTER THAN TO REPAIR IT.—A little medicine in the shape of the wonderful pellets which are known as Parmelee's Vegetable Pills administered at the proper time and with the directions adhered to, often prevent a serious attack of sickness and save money which would go to the doctor. In all irregularities of the digestive organs they are an invaluable corrective, and by cleansing the blood they clear the skin of imperfections.
