ADMINISTRATOR'S SALE

Valuable Farm Property

The Administrator of the estate of Patrick Maher, late of the Township of Warwick in the County of Lambton, Farmer, Deceased, will offer for sale by public auction at ROCHE'S HOTEL, Village of Watford, in the County o

Tuesday, the 19th Day of March, 1912,

at the hour of one o'clock in the afternoon, the following valuable land, anmely:—The West Half of Lot Number Ten, in the Fourth Concession, S.E.R., in the Township of Warwick, in the County of Jambton, One Hundred Acres, more

County of Lambton, One Hundred Acres, more or less,
The soil is good clay loam and there is about 55 acres cleared and fenced and the balance is in bush, and upon the lands there is erected a comfortable, frame kouse.
The lands are accessable by good roads to Church and School and Market.
The property will be offered for sale subject to a reserve bid.
TERMS—10 per cent, to be paid down on the day of the sale and the balance within fifteen days thereafter.
For further particulars apply to the undersigned,

COWAN & YOWERS, Solicitors for the Administrator Watford, Ont. February 24, 1912.

NOTICE TO CREDITORS.

In the Estate of Patrick Maher, late of the of Warwick, in the County o

Township of Warwick, in the County of Lambton, Farmer, Deceased.

NOTICE is hereby given pursuant to Ontario Statute, I. George V., Chap. 26, Sec. 55, that all persons having claims against the above named deceased, who died on or about the twenty-seventh day of January, 1912, are required on or before the twenty-third day of March, 1912, to send or deliver to Cowan & Towers, Wafford, Ont., solicitors for the undersigned administrator, their names and addresses, full descriptions of their claims and the nature of the security, if any, held by them.

of their claims and the nature of the security, if any, held by them.

And further take notice that after such last mentioned date the administrator will proceed to distribute the assets of the estate, having regard only to such claims as his solicitors shaft then have had notice and he will not be liable to any person of whose claim notice shall not have been received.

The Chinook Winds.

I have a matter which I wish to submit to you and to the public in general for consideration. It is with regard to a peculiarity in the circulation of the atnosphere which has escaped the notice of authors on that subject but which is or authors on that subject, but which is playing a very important part in the economy of nature and forcing machinists to recognize its presence. As it has not been given a name in any work of meteorology that I have read I will describe it as the upward continuation of a forced ascending current. forced ascending current.

My attention was first drawn to it by my windmill. When I am out in the field at the back of the barn I can see the wheel over the top of the barn but when the wind blows over the barn the wind mill will not work. Manufacturers of windmills have become aware of this peculiarity and make provision for it when erecting their mills.

It is very noticeable on the banks of Lake Huron that face the north-west wind. The country is level and there is a descent of about one hundred feet to the lake. The storm strikes the bank and then shoots away up into the air so that people living there do not feel the storm at all. The man who first told me about it said you could stand on the bank when the wind was blowing its worst and light your lantern.

The same thing on a larger scale :-The same thing on a larger scale:—Davis, in his excellent work on this subject, records some very interesting facts in this connection. He says: "Table Mountain, at the Cape of Good Hope, is spread over by a sheet of cloud known as the 'tablecloth' when damp winds blow over it; the cloud grows as the wind ascends on the windward side and dissolves away as it descends to leeward. Clouds of this kind sometimes do not touch the top of the mountain over which they are produced and from this it may be inferred that only certain ones of the they are produced and from this it may be inferred that only certain ones of the arching atmospheric strata are damp enough to pass the dew point as they rise." Just exactly what will happen. The clouds do not touch the top of the mountain at all. The wind shoots up far away above the top of the mountain and carries the clouds with it. If those strata that have not passed the dew point sweep the crest of the mountain as he infers why don't they blow away the 'tablecloth'?

When a violent wind blows up the face of a steep mountain it will continue its upward course until its force is spent, but the storm below keeps driving up and piling up until it sinks by its own weight and reaches the base of the mountain, a chinook.

But how does our theory agree with

and reaches the base of the mountain, a chinook.

But how does our theory agree with well attested facts. A look at the description of the Alpine chinook as recorded by Davis will prove very instructive. He says: "As the wind flows down from the peaks and passes of the Alps, the clouds that it carries along are soon dissolved by the increase of temperature produced as the air descends to the northern valleys: for a great part of the vapor has been taken from the wind to fall as rain or snow on the Italian slope; the remaining cloudmass stands on the mountain crests, and is locally known as the foelin wall."

foeln wall."

The fact that the cloudmass stands on the mountain crest shows that it is not swept by the storm. The wind must go above or the cloudmass would be blown

GEO. P. SCHOLFIELD, General Manager,

wind on the mountain passes that it was only natural for earlier observers to ascribe the origin of the warm wind to some warm source; and it was consequently referred to the hot Sahara and regarded as an extention to the sirocco of southern Italy. This has been completely disproved. Epsy and Dove were among the earlier meteorologists who suggested that the changes of temperature in vertical currents and the liberation of the latent heat from condensing only natural for earlier observers to as ature in vertical currents and the libera-tion of the latent heat from condensing vapor must be considered in its explana-tion; and this has been fully confirmed by modern students, especially by Hann of Vienna, to whom the suggestion of the initial cause of the heat and dryness of the foehn is due, and whose studies have given careful demonstration of the more general suggestions of others. When general suggestions of others. When thus explained it is manifest that the foehn need not be limited to a south wind in the northern valleys of the Alps;

wind in the northern valleys of the Alps; it might occur under fitting conditions as a north wind in the southern valleys of those mountains, and such has proved to be the case; it might occur at the base of other mountain ranges, as has been abundantly shown."

It is evident, from the above, that it is only where the windward side of the only where the windward side of the mountain opposes a steep front to the approaching storm that chinook winds are produced. The passes and the stretches where the front rises gradually allow the storm to proceed in all its fury, carrying cold and desolation for thousands of miles in the winter season. A promounter placed at the top on the promontory placed at the top on the windward side in these places would change these storms into chinooks. It would very agreeably alter our winter climate if these storms instead of leaving the top of the mountain winter blasts, were to leave the base of the mountain summer breezes. The parts of the Rockies that now produce chinooks are so small in comparison to the whole that the warmth is soon swallowed up by the surrounding cold. But make the whole

mountain produce chinooks and they will be felt to Newfoundland. The promontory would need be so constructed that it could be opened in sum-

The problem that confronts us at pres ent is how to prevent the chinooks now in operation from occurring in summer. PETER ANDERSON.

MARCH WEATHER RHEUMATIC WEATHER

Victims Can Cure Themselves With Dr. Williams' Pink

Pills. With the coming of March people who are afflicted with rheumatism begin to have unpleasant reminders of their trouble. The weather is changeable—balmy and springlike one day, raw, cold and piercing the next. It is such sudden changes of weather that sat the property of the state of the stat changes of weather that set the pangs and tortures of rheumatism, lumbago and sciatica going. But it must be borne in mind that although weather conditions start the pains, the trouble is deeply rooted in the blood. All the locking the start of the pains the trouble is deeply and the blood.

in mind that although weather conditions start the pains, the trouble is deeply rooted in the blood. All the lotions and liniments in the world can't cure rheumatism. Rubbing may seem to ease the pain while you are rubbing, but there its value ends. Only through the blood can you cure rheumatism. That's why Dr. Williams' Pink Pills have so many thousands of cures of this trouble to their credit. The new, rich blood which they actually make drives out the poison. they actually make drives out the poisonthey actually make drives out the poisonous acid, and rheumatism is vanquished.
Here is an example. Mr. W. C. Douglas, Webbwood, Ont., says: "I was
attacked with inflammatory rheumatism,
which spread through my entire system.
For two months I was not able to go
about, and seemed to be hovering between life and death. My joints were
swollen and my legs and arms twisted about, and seemed to be hovering between life and death. My joints were swollen and my legs and arms twisted, until I never expected they would return to their normal shape. The doctor seemto help me but not to cure me, and I would be better one day and worse the next. At this time a friend strongly urged me to try Dr. Williams' Pink Pills and I got a dozen boxes. Soon after beginning the pills there was a change for the better, and I continued using the pills until I was quite well again. The swelling disappeared from the joints. My limbs returned to their natural shape, and I feel as if Dr. Williams' Pink Pills have saved me from being a rheumatic cripple. I hope my experience may prove a blessing to some other sufferer.' If you suffer from rheumatism, or any other disease of the blood, begin to cure yourself to-day with Dr. Williams' Pink Pills. Sold by all medicine dealers or by mail at 50 cents a box or six boxes or \$2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

away.

Now let us see what is taking place on the leeward side. On the same page a little further down he says: "The heat and dryness of the foehn (chinook) are so unlike the cold and dampness of the

Address and Presentation.

A number of the friends of Mr. and Mrs. Isaac Ferguson, Metcalfe, presented them with a handsome parlor suite and the following address, which speaks for

To Mr. and Mrs. Isaac Ferguson and

To Mr. and Mrs. Isaac rerguson and family.

Dear friends:—We, your neighbors—and friends, having learned of your intended departure from our midst, feel—that we cannor allow this opportunity to pass without giving an expression of our feelings at parting with tried and true neighbors. We have for years enjoyed the benefit of your kindness, sympathy and uprightness in your associations and and uprigntness in your associations and dealings with us and as such you have our highest appreciation of the influence and value your lives were to the community. Our earnest hopes and wishes are that you and yours may be spared many years of happiness in your new home and that this occasion may afford your may happy recollections of the you many happy recollections of the years you have spent in Metcalfe. We ask you to accept this parlour suite as a slight token of esteem and regard. Signed on behalt of your friends and
