

mesial band and pale discal dot. Hind wings with distinct dark discal dot and mesial band. Thorax, legs and abdomen concolorous with wing.

Types ♂ and ♀. Kerrville, Texas. Received from Mr. Lacey.  
*Ipimorpha Nanaimo*, n. sp.—Expanse, 33 mm.

Considerably paler than *pleonectusa*, with more of a yellowish tinge. The ordinary markings showing dark against the pale ground, while in the old species the reverse is the case. The t. a. line presents more of an inward and the t. p. line more of an outward curve, and the ordinary spots are much less clearly defined. The basal half-line not in evidence, while the s. t. is only marked by the contrast between the slightly darker sub-terminal space with the lighter terminal. The terminal space is somewhat shaded with black scales outwardly, while the fringe and the costa for a short distance from apex has a quite pronounced reddish tint. The orbicular has a slight pointed projection outward, corresponding to a similar inward projection of the reniform. The mesial band of hind is dark and followed by a slightly darker shade than the ground colour. Beneath there is a well-marked common mesial band. There is, however, no trace of the ordinary spots as in *pleonectusa*.

Type, 1 ♂. Victoria, B. C., from Mr. Hanham.

(To be continued.)

#### OBITUARY.

TERTIA SILVIA CRUICKSHANK, wife of Charles Stevenson, Secretary-Treasurer of the Mount Royal Entomological Club, Montreal, died on the 8th April, after a few days' illness. She was born in Scotland on the 26th December, 1866, and came to Canada in 1892, and was married on the day of her arrival, 31st May.

She was an enthusiastic naturalist from her childhood, and made pets of all kinds of animals. Soon after her marriage, her husband took up his school-boy hobby of collecting insects, in which she joined him. In the summer months she spent what time she could spare from her domestic duties in entomological work and was a very successful collector.

She has left two children, Kenneth Ruttan, aged 11, and Ivy Silvia, aged 8, both of whom show promise of becoming entomologists.

The Montreal Branch of the Entomological Society of Ontario and the Mount Royal Entomological Club were well represented at her funeral. The former showed their sympathy by a wreath and the latter by a floral anchor. All the members of the Society unite in very deep sympathy with Mr. Stevenson and his children in their sad bereavement.

Mailed May 5th 1905.
