

# Canadian Experience

Videotex, Teletext  
& closed-user  
systems for...

Banking,  
Cable,  
Broadcast,  
Retail,  
Training,  
Travel,  
Education,  
Business . . .

## **NORTH OF THE BORDER**

Since Telidon was invented in Canada, it is natural that Canadian companies have emerged as world leaders in Telidon - NAPLPS technology. Since the first demonstration in 1978, an aggressive program of technological development, market testing and the provision of commercial Telidon services has given Canadian companies enviable experience and expertise with the new medium. Already, Canadian-made technology is in service in videotex systems around the world, and the half decade of experience has positioned many Canadian companies as recognized leaders in the design of special-purpose systems, turnkey operations and videotex consulting services.
