

Key results

The Youth Leadership, Entrepreneurship, Access and Development project in Nigeria, which began in 2014, partnered with financial service providers. Together, they developed and adapted nine financial products to meet the needs of young women and men entrepreneurs. Now, 568 entrepreneurs have been able to open bank accounts and receive loans for business start-ups.

Under the World Health Organization's Polio and Routine Immunization project, which began in 2016, there has been a 17% decrease in non-immunized girls and boys (down from 58,568 to 48,468). This project is active in 78 local government areas in seven targeted Nigerian states,

UNICEF's 2015-2017 Polio and Maternal, Newborn and Child Health Services in Hard to Reach Areas project carried out polio vaccination activities in 1,500 hard-to-reach communities. Targeting four Nigerian states, this vaccination program led to over 180,000 girls and boys receiving the oral polio vaccine. Communities received primary health-care services and, as a result, more than 170,000 girls and boys were screened for malnutrition and over 240,000 girls and boys received Vitamin A supplements.
