

PLANTING WILD PLUMS.

These plums planted *en masse* in a sufficient quantity on a place will gather unto themselves all the Plum Curculios on the place, and so protect all other fruit from its ravages. And being on them the female naturally lays her eggs in the fruit, few of which ever hatch, and so few reach maturity in this fruit. The extensive planting of the same on a place will well nigh exterminate the pest. — *Weir*.

SAN JOSE SCALE OR GREEDY SCALE.

(*Aspidiotus Perniciosus* or *Aspidiotus rapax*.)

A and B, portions of branches infested; C, a pear infested; D, larva of female enlarged.

This dreaded and most destructive enemy of not only the fruit, but the ornamental and forest trees as well, has secured a hold in some of the orchards in Oregon and Washington, and it is feared that it will be ultimately found in this province. Careful inquiry from parties with whom the Scale is found, develops the fact that they have been brought into Oregon on trees shipped from California. As trees from California have been pretty generally distributed all over the coast by the industrious tree pedlar, so it may be expected that these destructive insects have doubtless gone with them.

The remedy to be applied to without first known. The following

This is, without country. It affects some of the evergreens of the tree, also the turn the sap part presence upon the when badly affected

The Scale of centre, which is of somewhat elongate sixteenth of an inch very active and of eye. The young rapidly, there being the latter part of March

The fact that every variety of tree is in danger to not only well.

This pest is so trees are infested destroyed last season washed during winter

Solution No. tried this solution these insects more what is stated as to ing.

BLACK SP
