

The figure & Trowns on old-fashloned washday methods. For it is the magic figure in the 1900 Caternet Electric Washer which forces the water back and forth through the clothes, in a perfect figure 8 motion four these of oner than in the ordinary washer.

The swinging wrinter is reversible, and also works electrically. The copper tub hasn't one single part in it—nothing to lift out and clean after the wash is finished!

We'd be glad to deliver a 1900 Washer right to your home, and let you try it out. When you have seen what it can do, you may start paying for it on terms to suit your convenience.

FAIRS ADVERTISE YOU

Both the Community and the Exh.bitor Get Public'ty.

It Pays to Let Others Know That You Have the Goods — Fighting the Hessian Fly—The Silo a Proven Utility.

(Contributed by Ontario Department of Agriculture, Toronto.)

To the general farmer who grows good grain for seed, to the specialist in garden and truck crops, and particularly to the live stock man, the Fall Fair offers an opportunity. It pays to advertise; the Fair is the place where the people see the goods produced, and seeing is believing. Moreover, the papers report the win-nings, and through these the exhibition gets a large amount of adver-tising free which would otherwise cost him a considerable amount of money. Winning in close competitions under a competent judge adds dollars to the value of stock shown and increases the market price of any commodity, as well as giving the exhibitor a standing not only in his own community but over a section of community but over a section of country corresponding to the size and influence of the show at which prizes are won. The Fair is a good place to make sales. Prospective buyers see the good exhibits made and enquire about the breeding stock at home. Stockmen show at Fairs largely to make sales rather than to win prizes, although the latter is a factor in the sales and they are not disappointed as evidenced by the growing interest in the Fail Fair. Showing at the Fair, coupled with a judicious newspaper advertising policy, which should never be neglected, is good business. The two go together and work hand in hand. It pays to let others know of your good stock. Use printers' ink and show at the Fail Fair.—Wade Toole, O. A. College, Guelph.

Fighting the Hessian Fly.

Growers of winter wheat are advised to practice immediate control measures advocated by the Department experts. The following eight cardinal control measures, if rigorously enforced and adhered to by every grain grower, with prevent the attroduction and spread of the pest:

Do not sow wheat en stubble if possible to avoid it.

Plough under all infested stubble and ruined wheat where practicable soon after harvest, especially where this does not interfere with the growing of clover and forage grasses.

Destroy all volunteer wheat by Fighting the Hessian Fly.

grasses.

Destroy all volunteer wheat by harrowing, disking, ploughing, or otherwise.

Otherwise.

Plough all winter wheat land as early and deeply as existing conditions permit, and prepare a thoroughly pulverized and compacted seedbed.

coughly pulverized and compacted seedbed.

Conserve moisture against a period of drought at seeding time.

Use the best seed procurable.

Keep the soil in good tilth and, most important of all, sow winter wheat during the fly-free period as advised by local farm advisers or experiment stations.

Work in co-operation with your reighbor in fighting this pest, as sommunity action is essential to insure complete success.

Late sowing is recommended, but not too late sowing, as the latter is as disastrous in its ultimate results as is too early sowing. Uncle Sam's grain-disease doctors say that the safe date in a time of normal rainfall usually coincides, in any one locality, with the preferable time for sowing to bring maximum yield. For example, grain growers in northern Michigan and Ontario are advised to sow after September 1, while the producers of southern Michigan and northern Ohio will escape fly infestation if they plant their grain about September 20—U. S. Weekly News Letter.

Silo Almost as Useful as Barn.

The silo is rapidly becoming recognized as a necessary part or the farmer's equipment. A farm without a silo, at least in the corn area, is no longer up to date. The rapid adoption of the silo is accounted for by recognition of its advantages.

If corn is cut at the proper stage and put into a good silo, the whole corn plant is eaten.

Silage is more convenient to feed than is any other rough feed commonly used on the farm.

Silage is both palatable and succulent.

Silage is both paratable and culent.

The addition of a succulent feed to a ration increases the digestibility of the dry feed eaten.

With a silo it is possible to save corn that might otherwise, owing to immaturity, be largely wasted.

The silo not only provides excellent feed in winter time, but furnishes a means of keeping more for summer use feed of high quality

Meerschaum Houses Several houses in a Spanish town are built of meerschaum, a coarse variety of which is mined in the neighborhood.
