

SPORTOGRAPHY

TO-NIGHTS GAME.

St. George's team which made its debut in the Grand Falls will play a game with the St. George's team on Saturday night at 7 o'clock. The best of the line-ups, so that a good game is expected. The following will be the line-up:

Grand Falls Team—R. Walsh, goal; J. Delahanty, back; Duggan, forward; Vavours, halves; Flynn, full back; Ewing, Meany, Conlay, forwards.

St. George's Team—(C.E.I.) goal; J. Delahanty, back; Duggan, forward; Vavours, halves; Flynn, full back; Ewing, Meany, Conlay, forwards.

St. George's Team—(C.E.I.) goal; J. Delahanty, back; Duggan, forward; Vavours, halves; Flynn, full back; Ewing, Meany, Conlay, forwards.

ertheless, the league executive emphasized every effort would be made to trace them to their source. After the hearing this morning, President Hayler advised the players to institute legal action against the publication.

SAINTS AND C.E.I. PRODUCE A SCORELESS DRAW AFTER A LUTHERAN GAME.

We did not have the doubtful pleasure of witnessing last night's league game, but it was quite apparent that the strictures in the local press of late are having no effect on either the players themselves or the management of the various clubs. Receipts this year are very disappointing; six games, we understand having grossed admissions of less than ten dollars each—a thing unheard of in football was introduced here. If the players are not serious about the game then they cannot expect the public to be. It costs money for the spectators to follow up the schedule and it's up to the League to discipline the defaulters if they hope to have the combined and sympathetic interest of the great general public. The "News" Sporting Editor has this to say this morning of last night's C.E.I. and Saints game:

The oft postponed game, Saints vs. C. E. I. was played last night and resulted in a draw, neither team scoring. The game was a disappointment, as only half the Saints team turned up and substitutes had to be taken from the field and even then the team played only ten men in the first period. This is a respectable state of affairs in the interest of the game, and if persisted, it means that football will meet the fate of baseball in our midst. Apparently when a team is out of the running for the championship honors, players become indifferent and this has been the position on many occasions this season, hence the public have also grown indifferent and the attendance has been the worst in years.

The bright spots in last evening's game was the goal kicking by Smith of the Institute, and the work of the Sawyer brothers, while Dwyer as usual was up to form. In the second period Adams (Saints) and Feaver (C.E.I.) got into a mixed up, which resulted in blows being exchanged and referees quick was obliged to put both players off for the remainder of the game.

There are still three games to be played to complete the League series viz. C.E.I. vs. Felicians; Saints vs. Felicians; Cadets vs. Felicians.

It was hoped to play the latter game this evening, but this could not be arranged, and no definite playing dates have yet been announced.

JUNIORS MEET TO-NIGHT.

The Junior Football League is having a most important meeting to-night to discuss certain matters and a full representation of all clubs is earnestly requested by the Executive.

ANSWERS.

To J.H.—We give herewith the records asked for in your letter of Friday's date:

Eng. Amer. N.B.A.
100 yards . . . 9% 9% 10
200 yards . . . 19% 19% —
120 hurdles . . . 14% 14% —

No times have been recorded for the hurdles in Newfoundland as our distance is 100 yards only owing to the limitations of St. George's Field, and further regulations hurdles have never been used here.

JACK KAVANAGH ENTERING LISTS.

Jack Kavanagh has signified his intention of entering the 10 mile "Telegraph" Road Race on September 6th. He was one of the stars of by-gone years, and is the only local star to have beaten John Bell, the local champion, which he did some years on the St. Bon's Campus.

A severe attack of pleuro-pneumonia made him retire but he feels as fit as ever now, he states, and will undoubtedly make a big bid for championship honors. The first eight men to finish inside of 55 minutes will be awarded gold and silver medals, while the winner secures the "Telegraph" trophy and a special A.A.A. medal.

POLE VAULTING.

News from the other side of the ocean tells about a wonderful pole vaulter clearing fifteen feet, nine and three-quarter inches. This is a world's record. Charles Hoff has been credited with this performance which was made at an athletic meeting in Christiania on July 23rd.

News from London also tells us of a French athlete named Loden clearing 5 feet 4 inches in a running high jump, and although this is not a record, it is a splendid performance.

Hoff already held the record at pole vaulting before making this leap, but the mark made by Loden is the high jump in 5 inches better than he did at Antwerp in 1920.

TO-DAYS BEST LAUGH.

"We'd do best way to teach a girl to swim?"
Johnny—"Well, you want her take her gently down to the water, put your arm around her waist, and—"
Jimmy—"Oh, cut it out. It's no sister."
Johnny—"Oh, push her off to dock!"

Tunnels a Menace to Crews of Trains.

Washington, Aug. 25. (A.P.)—If you chafe and choke over the heat fumes entering your railway car the next time you go through a tunnel, think of the men in the engine cab and be happy. For, says the Bureau of Mines, the heat to which trainmen are subjected not only ranges as high as 125 degrees, but the smoke and moisture-laden atmosphere is often filled with deadly carbon monoxide gas.

The bureau recently conducted a series of tests in railroad tunnels in connection with investigation into accident causes. Out of 40 tunnel trips whose duration ranged from 4 1/2 to 25 minutes, it was found that carbon monoxide was present in the air in 34 cases. Hot exhaust gases from the engines were another source of danger.

Exhaustion of train crews due to exposure to atmospheres containing carbon monoxide, or to exceedingly high temperatures saturated with moisture, was said undoubtedly to have been the cause of many accidents.

Results of physiological tests over periods of ten minutes in engine cabs showed that the conditions there might be severe enough to cause asphyxiation or exhaustion in periods of 20 minutes, in case an engine became stalled in a tunnel.

While the bureau has experimented with gas masks for the use of small crews, and has perfected a small pocket respirator for quick use when in a tunnel, it has been concluded that the most satisfactory method for overcoming the tunnel atmosphere is by supplying fresh air to the men from the train's air brake system. A supply is led to each man through a small rubber tube with an ordinary funnel on the end, which, when held close to the face, furnishes an adequate fresh air supply.

C.C.C. Band Concert Bannerman Park to-night.

The C.C.C. Band will give a concert at Bannerman Park to-night. The program is well arranged and the band is in excellent condition.

Why Farmers Like Lime.

Lime is literally the life of the land, and an absolutely necessary constituent of all fertile soils. Without it agriculture would be impossible. And now large tracts of country are in need of it. Lime keeps clay soil in open workable condition, but on the other hand, is useful in binding together very light sandy soils; and it enables other fertilizers to do their work.

For certain diseases of vegetables lime is a specific. Some years ago I made a garden on light peaty moorland soil, but although I could grow good peas, lettuce and celery, round that turns always failed. They became afflicted with that detestable and highly infectious disease known as "finger and toe." Cabbages, too, were a very difficult crop.

By advice of the Board of Agriculture I dressed with lime at the rate of over two tons to the acre, and since then have had no difficulty whatever in growing either turnips or any kind of green stuff.

The action of lime on poor pasture is amazing. Weeds disappear, clover takes their place, and the sward becomes thick and firm. An interesting experiment was made some few years ago on pasture land infested by that abominable weed, sheep's sorrel. Part was well dressed with lime; part left undressed. From a square yard of the lime-dressed underground shoots of sheep's sorrel measuring in all 188 inches were forced out, but in a similar space of well limed land only 51 inches could be found.

Lime, which once was a common practice all over England and Scotland, went out of fashion about fifty years ago, and all over the country you will find once busy lime kilns now falling to ruin. Many of these could quite easily be repaired and brought into use again, and a cheap local supply of this essential product thus secured.

To-day many farmers are again beginning to use lime for their turnip crops, but as a rule they put on only a few hundredweight per acre, which is not enough. For land where the lime supply has become depleted two or even three tons per acre are necessary to restore the health of the soil, and this dressing must be repeated at least once in five years.

Household Notes.

Apple sauce, flavored with nutmeg, is nice served with sausage.

Sliced cold towel is good served for breakfast with hot broiled tomatoes.

Omelette is exceptionally good when cooked with a small piece of fat pork.

Serve rice fritters and spiced blueberry sauce with broiled breasts of quail.

Add a few slightly dried and finely cut dates to your nut bread mixture.

Serve cubes or balls of chilled watermelon on lettuce with cream dressing.

At All Ages—Prettier Teeth

Safer, whiter, cleaner teeth

Dainty people—millions of them—get them in this way

This is part of a world-wide crusade for safer, whiter teeth. Dentists of some 50 nations aid it. It has brought its benefits to millions. It is something you and yours should know. We urge again this ten-day test to show you what it means.

The war on film
Your teeth are coated with a film—that viscous film you feel. It clings to teeth, enters crevices and stays.

Food stains, etc., discolor it. Then it forms dingy coats. Tartar is based on film. That's why teeth grow cloudy and why troubles come.

Film holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

Very few escaped
Very few people, young or old, escaped those film-caused troubles. Beautiful teeth were seen less often than now. All because old methods left much film intact. So dental science sought for film combatants, and two were found. One acts to curdle film, one to remove it, and without any harmful scouring.

Avoid Harmful Grit

Pepsodent scrubs the enamel removes it without harmful scouring. It is gentler than sand, never sears a film combatant which contains harsh grit.

Pepsodent MARK

The New-Day Dentifrice
A scientific tooth paste based on modern research, free from harmful grit. (Now advised by leading dentists the world over.)

Many Precautions Adopted

TO RENDER NIGHT FLYING SAFE.
Chicago, Aug. 25. (A.P.)—The meteorological conditions of the country at night and the elaborate precautions taken by the government to guard against the hazards of night airplane flying will favor the success of night air mail service when the government inaugurates this service between Chicago and Omaha next Monday night, according to government air service officials in statements to The Associated Press. The distance is 540 miles.

Air conditions at night, it is pointed out, are more favorable to flying than during the day. The night atmosphere does away with the "bumps" in the air which are the cause of lamentations of day aviators. These "bumps" result from the sun's rays coming in contact with the moistened atmosphere rising from wooded lands, lakes, rivers, and green vegetation, which forces upward a strong air current. As these currents meet the airplanes, the plane has a tendency to rise and when the aviator flies out of the current the machine immediately drops.

Airplane motors, as a rule, run better at night than by day because of the increase of oxygen and moisture in the air, according to aviation officials. They expressed the belief that this would add to the success and efficiency of the government's night mail service.

Furthermore, large beacon lights have been installed every 12 1/2 miles between Chicago and Omaha. These will be kept going continuously throughout the night and will throw a swirling flood of light into the air to guide the aviator over his route. In addition, lights will flood the landing fields and indicate to the aviator the direction the wind is blowing.

To care for the hazards of forced landings, the airplanes in night service will be equipped with wing tip lights controlled from the pilot's seat. Parachute landing gear, also controlled automatically, will be carried by the aviator. As he slides his plane in a circle in landing, the field, wherever the forced landing may happen to be, will be flooded with light. The wing tip lights will not blind the aviator's view, but clearly indicate any obstructions underneath him.

Although difficulty was anticipated in getting aviators to fly the night shift, approximately 75 per cent. of them have expressed a desire for this service. This is thought to be due to the government's elaborate plan of preparation in preparing the night flying program. The government investigation of night flying had extended over a year and a half, and the present plans prove practical the route may be extended further west.

Clothes That Poison.
GARMENTS THAT BROUGHT DEATH TO THEIR WEARERS.

To be poisoned by the clothes you wear sounds impossible—but isn't. Some time back a laundress used ornament, a beautiful yellow poison, to colour some silk underwear, not realising in the least the danger of what she was doing. Some thirty women who wore the poisoned articles were taken suddenly and seriously ill, and nine of them died.

A poisoned paper collar killed a young Liverpool merchant. The poison that did the damage was corrosive sublimate, which had in some mysterious way got mixed with the size used for glazing the collar.

In another case cyanide of potassium found its way into the dye used to colour some pairs of stockings. These were worn by a young lady, who died from the effects of the poison, which is one of the deadliest known.

In yet another case two young girls went to a ball wearing green tulle dresses. They danced themselves into a perspiration, returned home, and expired in agony a few hours later.

Suspicion fell on the green ball-dresses, which were taken away for analysis. It was found that the material of which they were composed contained thirteen per cent. of its weight in arsenic.

The dresses were literally dressed of death. Even the shop assistant who sold the poisoned garments in the first instance suffered severely through merely handling them.

Accidental poisoning from arsenic, not necessarily fatal, is unfortunately, far too common; the reason being that this particular poison is frequently used in the textile and allied trades.

It is found in quantities dangerous to health, if not to life, in many dress fabrics dyed with aniline dyes, sometimes in black stockings, in carpets, and in some kinds of artificial flowers.

SKINNER'S MONUMENTAL WORKS.
225 Duckworth St. St. John's, Nfld.
HEADSTONES AND MONUMENTS.
Write to-day for our free catalogue. Expert carving and lettering. First class only, no slop work. All orders receive careful attention.
