

FAUNA OTTAWAENSIS.

HEMIPTERA.

By W. Hague Harrington, F.R.S.C.

Since the publication, in June 1892, of the list of Ottawa Hemiptera (Ottawa NATURALIST, Vol. VI, page 25), the following additional species have been collected, and have been kindly identified by Mr. E. P. Van Duzee. Unless otherwise stated, only single specimens have been observed.

HETEROPTERA.

Corimelaena nitiduloides, *Wol.* April 15th.

Euchistus ictericus, *Linn.* June 3rd 1893, Mer Bleue. May 25th and June 10th, 1894, Hull.

Phytocoris tibialis, *Reut.* Apparently common. July.

Neurocolpus nubilus, *Say.* July 29th.

Lygus pabulinus, *Linn.* July.

Diplodus socius, *Uhler.* July 30th. On Solidago, near Hull. This species is recorded from the Western States, and Mr. Van Duzee expresses his surprise at its occurrence at Ottawa. He asks "did it not come from British Columbia?" As it was captured not many hundred yards from the main line of the famous C.P.R., it may possibly have stolen a ride across the continent upon some train.

Limnotrechus marginatus, *Say.* Sept 3rd. Both sexes (and young apparently of same species) abundant in the canal. Probably the common species of all our waters.

Rhagovelia obesa, *Uhler.* Nov. 3rd. Both sexes abundant in Rideau River, above the railway bridge, near Hog's Back, in the small pools of the rapids.

HOMOPTERA.

Agallia sanguinolenta, *Prov.* June 26th.

Parabolocetrus viridis, *Uhler.* This insect was erroneously given in the list as *Gypona quebecensis*, *Prov.*, which is a synonym of *G. striata*, *Burm.*
