

Owing to Canada's size, transportation and communications have traditionally been high growth areas within the economy. They account for almost 10 per cent of the country's industrial infrastructure.

"Made in Canada"

The four main classes of Canadian exports by dollar value are motor vehicles and parts, machinery and equipment, fabricated metals and other fabricated materials. Canada exports petroleum to the United States and metal ore, forestry and agricultural products world-wide. At the same time, it is an important exporter of advanced industrial commodities.

Another major export is expertise. Canadian specialists in engineering, mining, geology, aerial surveying, electronics and manufacturing can be found working in many parts of the world on projects ranging from telecommunications to nuclear power stations. Canada has installed high performance microwave systems in more than 20 countries.
