

KAMLOOPS B. C.

ing stock. Since a century ago stock raising had gradually become a considerable industry, until the later influx of settlers led to the ranches being cut up for small farms. With the adoption of scientific methods, farming is becoming more profitable. The Government Departments of Agriculture give advice and much educational work. Those seeking information as to land for settlement should get a copy of the Government's pamphlet just issued at Victoria, B. C., entitled "Kamloops

The Iron Mask Copper Mine, Operated by City Hydro-Electric Power

Land Recording Division." In England the province's Agent-General's office is Salisbury House, London, E.C.

Roads

From Kamloops radiating in every direction, are good roads leading up into the highlands, or along the river valleys. These are steadily being improved, and extended for the benefit of settlers. The efforts of the Board of Trade have led to important developments, greatly helping farmers attending the local market. This work will be persistently carried on by the Board, which has been met by the Government in an effective and liberal manner.
