NINETEENTH YEAR

SPANIARDS FALL BACK

Make No Stand Against the Army of Invasion
Under General Shafter.

SPAIN'S FORCES BEING CONCENTRATED.

Trouble Likely Awaiting the American Troops at Santiago—
One of Cervera's Vessels Runs the Blockade in Safety—
General Shafter Throwing Out Advance Parties—Cubans
Prove Capable Allies—Cervera's Fleet Has Sailed for the
Philippines.

WAB NEWS PARAGRAPHED.

A prominent Spanish General says that before Don Carlos could
cut any figure in Spanish politics, the present Government and the
Monarchy would have to be swept away, and that there would be a
Provisional and probably a Republican form of Government, headed by
Castelar. This would be followed by a long and bloody civil war.
A report by way of London says that Manila has been occupied by
parts of crews of foreign warships. The report lacks confirmation. A
month ago, it is said, Admiral Dewey proposed to bombard Manila, but the
German consul, acting on instructions from his Government, opposed the
bombardment. It was then that Dewey asked for reinforcements and
supplied Aguinaldo with arms. It was an indirect capitulation to Dewey
while sparing Spanish pride.
It is reported from Vienna that the position of the Queen Regent of
Spain has become altogether untenable and that Her Majesty will
shortly resign.
Six thousand trained American soldiers are now encamped in the hills
around Daiquiri and ten thousand more are resting on board the trans-
ports off shore, ready to disembark as soon as boats can be made to carry
them.
The Washington Government has not yet formulated a definite policy
as to the Philippines and Porto Rico. It is stated, however, that these
islands will not be allowed again to fall into Spanish hands.
A correspondent at Madrid now talks about a conference of all the
south and central American republics to consider the advisability of
checking the aggressiveness of the United States.

SPANIARDS BEWILDERED.

Gave Chase to Counterfeit Trans-
port Boats and Could Not Locate
Point of Debarcation.
New York, June 23.—A special from Playa
Del Este Cuba, to The Journal, says
that a fleet of counterfeit transport
boats, carrying Spanish soldiers,
was seen at Daiquiri at 1 o'clock this morning. As
a result, and to distract attention, three
thousand soldiers were disembarked at
Aguadores. They will re-embark and join
the main army. Admiral Sampson's ships
engaged the counterfeit transport boats
at Canabana, and so bewildered the Spaniards
that they could not find the actual point of
debarcation. Counterfeit transports
(colliers), were sent to westward as if to
land troops at Canabana or Aceraderos.
These were followed by Spaniards who
were thus led away from Daiquiri from 20
to 30 miles. Eight infantry regiments were
the first troops to set foot on Cuban soil.
First volunteers to land were the 2nd
Massachusetts.

AMERICA'S FRIEND AT HAVANA.

Washington, June 23.—The British Consul
at Havana, Mr. Gollan, who has so long
been an ardent friend of the United States
interests in Havana, was necessarily left
to quit Havana for home on leave. He
has been a long time in Havana continuously,
and has been under much strain lately.
During his absence, Mr. Jerome, Vice-
Consul, will assume charge of the Consulate,
along with the care of American interests.

BRITISH WARSHIPS MOVE

Three Ordered to Proceed to Mani-
la—Rumors of Interference by
Germany.
New York, June 23.—A Hong Kong special
to The Journal says that the British
warship Pigmy cleared for Manila to-day.
It is reported that the Powerful has also
been ordered to Manila, and the Centurion
from Wei-Hai-Wei. It is openly stated here
that the Germans will attempt to prevent
the bombardment of Manila should Dewey
decide at any time that bombardment is
necessary.

AN OFFICIAL CONTRADICTION.

The German Ambassador Calls Up-
on the Secretary of State.
A Washington special to The Journal says
that the German Ambassador called on the
Secretary of State to-day, and assured him
that there was no truth in the report sent
out from London that German marines had
landed in Manila in advance of the occu-
pation of the town by United States troops.
He also denied the intentions attributed
to Germany as published in The London
Daily News.

SPREADING OUT THEIR LINES.

American Troops Take Possession
of the Country Around Daiquiri.
A Washington special to The Journal
says: Advance just received from General
Shafter states that the lines of the invaders
have already been spread out around the
country in the neighborhood of Daiquiri,
and that camps have been established on
both sides of the little river running into
the bay. Engineers are building roads and
preparing for the advance on Santiago.
General Shafter says the Cubans are doing
account duty in excellent style, and that they
are a great acquisition to the forces.

ESCAPED FROM SANTIAGO

Spanish Cruiser Reina Christina
Runs the Gauntlet of the Entire
American Fleet.
By Associated Press.
Madrid, June 23.—In the Chamber of De-
puties to-day Captain Anon, Minister of
Marine, read the following official despatch
from Havana:
"The Spanish auxiliary cruiser Maria
Christina has succeeded in running the
blockade, and has entered Cienfuegos with
a large cargo of provisions and war stores."
A despatch to The Imperial from Ha-
vana says: "The cruiser Reina Christina
escaped from Santiago, and, after running
the gauntlet of the entire American fleet,
safely reached Havana. Three fast Ameri-
can cruisers pursued her near Havana. It
was an exciting chase, but the Americans
did not venture within the range of the
Havana forts."

CONCENTRATING AT SANTIAGO.

London, June 24.—The Madrid corre-
spondent of The Times says: The Govern-
ment has received an additional despatch
from Cuba, not yet published, to the ef-
fect that Spanish reinforcements are being
concentrated at Santiago.

CAMERA IS BOUND FOR MANILA.

London, June 24.—The Madrid correspon-
dent of The Daily Mail says:
"Senior Sagasta informed the Chamber of
Deputies to-day (Thursday) that Admiral

RUMORED CABINET CHANGES

Possibility That Mr. Bernier May
Succeed Sir Henry Joly.

Stolen Dominion Bank Bills in Cir-
culation at Montreal—Governor
of the Straits Settlements Inter-
viewed—Carrazza and Du Bose
on the Stand—Room in the Min-
ing Market.

Montreal, June 23.—(Special)—The news
that Mr. Bernier, M. P. for St. Hyacinthe,
would succeed Sir Henry Joly de Lotbiniere
in the Cabinet was received here to-day, al-
though La Presse, in announcing the ap-
pointment of Bernier, has always been an un-
compromising foe to the Drummond deal.
The news mentions what changes in the
Cabinet, Mr. Bernier has always been con-
sidered a Liberal of the old school, and a
man of independent means and character.
Among the anti-Tarte faction in the Liberal
party he has been very pronounced, and al-
though the member for St. Hyacinthe, he
has always been an uncompromising foe to
the Drummond deal. One thing is cer-
tain, if Mr. Bernier goes into the Cabinet
it will be as the friend of the railway along
the south shore between Sorel and Levis,
in and out of season, he has always
maintained that this line was the proper
extension of the Intercolonial to Montreal.
Sir Joly de Lotbiniere has been forced out
of the Cabinet it will be the death knell
of those hopes which The Witness school
entertained of the present Ministry, and
considering the fact that paper's violent
opposition to the Government's harbor
policy it looks as if the Witness might
go into opposition since their leader,
Mr. Joly, has been broken and their leader,
Sir Henry, has been forced to make way
for more ambitious statesmen.

THE LEAKY BLOCKADE.

Any Quantity of Provisions Being
Smuggled Into Havana From
the Southern Ports.
Of Santiago de Cuba, June 23, 5 o'clock
via Kingston, Jamaica, to-day.—With the
complete investment of Santiago de Cuba
by land and by sea but a few days off,
the admiral has decided to strengthen the block-
ade of the large ports on the southern coast,
westward of Santiago de Cuba. For
three weeks the coast west of San-
ago to Cape San Antonio, has been prac-
tically unprotected. The blockade has been
simply on paper, and it is now stated
that it is known that quite a number
of ships have run the blockade and that an
immense quantity of provisions, and a few
ships, have been landed there. Most of the
blockade runners have landed their cargoes
under the lee of the Isle of Pines, and
Cuba, being but miles across, and thus
the Spaniards have secured ample supplies.
The admiral has now decided to strengthen
the blockade and yesterday he de-
spatched four fast ships to patrol the
coast from Cape Cruz to the Isle of Pines.

TESTING THE PEACE POLICY.

London, June 24.—The Madrid correspon-
dent of The Times writes: The Govern-
ment, it is reported, has authorized its
agents throughout the country, to ascertain
the opinion of the people as to the possi-
bility of terminating the war. Senior
Sagasta will announce the result after the
Cortes is prorogued.

REVERSED SWITCH LAMP.

Deliberate Attempt to Wreck a
C.P.R. Train While Passing
Through the London Yard.
London, June 23.—A dastardly attempt
was made last night to wreck No. 3 ex-
press on the C.P.R., due here at 11.35 p.m.
from Toronto. The safety switch between
Adeleide and Williams roads, in the Lon-
don yards, was opened, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the

so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
switch was closed, and the signal light
so adjusted as to indicate "all right ahead"
on the main line. The engineer, taking the
light for the signal in error, proceeded
at a high rate of speed, dashed into the
open switch. There was a wobbling
of the locomotive, and a fine shower
of sparks. The train stopped, and the
passengers were informed that the train
was to be stopped for a second or two, and then
the train went over the switch on to the main
line again, on which it stopped. The
