The Toronto "World" publishes the following:—

The World is informed that another important amalgamation of extensive mining interests is about to be brought to a head in this city. The two enterprises in question are the Hammond Reef Gold Mining Company and the Folger-Hammond Gold Mining Company. It is said that the two companies are to be consolidated under one management, and, if this is brought about, the new corporation thus formed will be a powerful one. Its properties will include practically all of the famous Hammond Reef—over three miles in extent—a 40-stamp mill and the large electrical power plant at Clearwater Falls, all paid for and without any liabilities. As already known, those identified with these companies include Hon. George A. Cox, Col. Sweny, Sir Richard Cartwright, Mr. James Hammond, the discoverer of the reef, and the Messrs. Folger of Kingston. The "World's" information is based on good authority, and will be found worth following up.

\* \* \*

The output of the Mikado Mine for the year ending 30th September, 1897, was \$36,820, and for 1898, \$39,435. This year it is estimated the output will exceed \$100,000. The last clean up netted \$15,000, of which \$2,300 was obtained from the concentrates.

\* \* \*

Two years ago a gentleman in Butte City is reported to have purchased 10,000 shares of Republic stock for \$600. He has since received \$1,200 in dividends, and a short time ago sold out at \$3.50 per share, so that his investment returned him \$36,200.

Rat Portage "Miner."—

There is no question but that there is a good deal on for the Sultana in England. The owner, Mr. J. F. Caldwell, is there now, and it is likely that a deal will soon be consummated that will do much to advertise the gold mining interests of Ontario.

It is estimated that there is at least \$710,000 worth of ore in sight. With a 10-stamp mill in 1896, it produced \$51,000; in 1897, \$59,000. At the beginning of 1898 a 20-stamp mill and a complete chlorination plant was installed, and in 1898 the yield is estimated at \$150,000.

The opening of the new Pashaw vein and the ore from the Sultana vein is said this year to be of a better quality, so that it is believed that the output will be largely increased in 1899.

The stock of the Amalgamated Copper Co. has declined to par, which was the issue price. It is confidently expected that the Co. will earn \$4,000,000

more per annum than would the individual companies of which it is composed working as separate enterprises.

The price of copper is quoted in London at £78, as against £52 in 1898, £48 in 1897, and £45 in 1896.

## MONTREAL STOCK EXCHANGE SALES

### THURSDAY, 18TH MAY.

#### MORNING BOARD.

No. of Shares.	Price.
