

STABLE IN WINTER

Your Dairy Cows Comfortable and Clean.

the Place With Whitewash and Some Germ-Killer - Fill Broken Windows, Panes, Provide Obel Ventilation - Plants in Winter.

(Reprinted by Ontario Department of Agriculture, Toronto.)

THE period of long winter is here. Of necessity, our milking cows must have special protection from cold and at the same time must be as comfortable as possible. The whole of the inside of the stable should have a thorough cleaning. The dust and cobwebs swept from the walls, ceiling and floor; the windows should be thoroughly cleaned, also the stalls. Then spray with all over the inside, except the walls. To the whitewash add some such as carbolic acid, or a chloride of lime. This will kill disease germs in any cracks, crevices, and in the health of the cows is at the foundation of good milk production.

Next step is to put in all window lights. But where the light is not needed, as at the present high prices of coarse cloth, such as an awning, may be tacked over the window. This will provide ventilation in a stable not otherwise obtained.

Stables need ventilation by having the foul air removed fresh air introduced without directly on the cows. A good way to do this is to have a side-draft. Foul air out through the ceiling, fresh air in through the side-draft. Foul air out through the ceiling, fresh air in through the side-draft.

Children Cry for Fletcher's

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are especially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulence, Wind Colic and Diarrhoea, allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food, giving healthy and natural sleep. The Children's Comfort - The Mother's Friend.

GENUINE CASTORIA ALWAYS

Bears the Signature of

Chas. H. Fletcher

In Use For Over 30 Years

"Seein' Things At Night"

TO MOTHERS! Guard your kiddies against torpid liver, sour stomach, constipated bowels which generate poisons. These "inside" poisons circulate to the brain, producing bad dreams, then a feverish head. Unless you "work" out these poisons you will have a real sick youngster shortly. Cascarets are a candy cathartic, ideal for children. Cost only 10 cents a box. Read below!

Children love Cascarets because they taste like candy. When your child has a white tongue, feverish breath, foul stomach, give Cascarets anytime to "work" the nasty bile, souring food and bowel poison from the clogged-up places. You needn't coax even cross, sick children to take these harmless candy "Cascarets." They never gripe - never injure. Cascarets never disappoint the worried mother. Each 10 cent box contains directions and dose for children aged one year old and upwards.

EMPLOYMENT SERVICE OF CANADA. EMPLOYERS. THE EMPLOYMENT SERVICE OF CANADA has been created to grade the various classes of workers - trained and untrained - and to place the best in the country at your disposal, through a system of Employment offices from Coast to Coast. THE PROFESSIONAL AND BUSINESS SECTION exists to place you in touch with Professional, Business and Technical workers. THE INFORMATION AND SERVICE BRANCH DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT has a representative in each of these offices to render whatever special services may be required in the employment of the RETURNED SOLDIER.

BUILDING AN ICEHOUSE

Good Type for Use on the Average Farm.

Every Milk Producer Should Have One. The Work and Cost of Erection Light Compared With the Benefits.

EVERY Ontario farmer who produces milk - and most of the farmers do - should give a quantity of ice each winter, in order to make it easier for him to cool the milk down after the evening milking, and to keep it sweet for such short periods, - week-ends for example, - as he may be required to keep it before delivering it to the cheese factory or other point of disposal. In order to preserve the ice satisfactorily some form of ice-house or shelter is necessary. The purpose of this article is to describe in a few words a type of ice-house which will give good satisfaction.

The ice-house does not necessarily have to be expensive, but certain conditions in regard to it must obtain if the ice is to keep well. These I shall mention as they arise. The protection of ice from sun's rays, this is the wall, good drainage from the bottom of the house, either natural or artificial, free circulation of air through the top, air-tight foundation, plenty of good quality of sawdust on all sides of the mass of ice, and close packing of the ice. If these conditions can be secured in a rough bin built under a shed, or a lean-to on the shady side of a building, all well and good unless one has other good reasons for building a more expensive structure elsewhere. The matter of convenience is often a deciding factor in this case, and the type of ice-house I am about to describe is a good illustration of this fact. Only once have I seen it in use, but there is no reason why it could not be used in any locality.

This particular type consists of a lean-to structure of wood at one end of the barn which has the stable underneath. The size would vary with the amount of ice required, probably a building 15 feet square and 12 feet high would be large enough for most farmers' needs. In this structure and at the side adjacent to the barn, or rather the basement wall, is built a concrete enclosure about 6 feet square and 6 or 6 1/2 feet high. A door in the basement wall admits one to it. In the side opposite to the doorway there is a row of 3 or 4 inch by 2 inch studs, the bottom of which is in the cold air from the ice which is packed closely to the concrete storage on all three sides and over the top as well. Between the top of the concrete and the studs there is a narrow passage-way or flue for allowing the foul or used air to get out, hence good circulation in the storage is provided for. In this particular case the farmer has his milk-room containing cream separator, etc., adjoining this storage and whenever he wishes to cool milk or cream or store it he puts it in this storage. Other articles, such as butter and meat, are also stored at times but of course only for a few days at a time. Hence much handling of ice is saved as well as considerable time. The building is made of wood, the studding being boarded on both sides. It would be advisable to fill the space between the two boardings with planer shavings or good quality sawdust. The roof is covered with shingles. The gables are left somewhat open for ventilation. Plenty of sawdust is used around the ice next to the walls, and also a good depth over the top, none, however, is used between the cakes of ice. If a few cakes of ice are required for household use they may be easily taken out of the sawdust in the top of ice-house or at one side if more convenient.

It will be seen, therefore, that this type of ice-house does double duty in a degree, namely, providing a small ice-cold storage room, cooled by the ice mass directly, in addition to housing ice for various incidental uses in the summer-time. In a case of this kind there would not be much need for taking out ice except for supply in the household refrigerator as the storage room would take care of the ordinary cooling and preserving of products. Believing this arrangement to be valuable, and in many cases practicable on Ontario farms, I have much pleasure in recommending it to farmers in general. - R. R. Graham, O. A. College, Oshawa.

Still a Place for the Good Horse. Horses have not been meeting a keen demand in Canada since the war broke out and have increased about \$50,000 since 1914. However, a real good heavy draft horse is hard to find, and if Old Country markets are any criterion of the trend of affairs an awakening in the Canadian Draft Horse market should soon follow. Draft geldings are selling in Ontario for from \$300 to \$500 and even up to \$1,000 each. A returned officer told me recently of seeing a number of Canadian geldings in Old London for \$100 (\$500) each. About one-fifth of Great Britain's ordinary supply of work horses went to the war and a number of useful brood mares were also taken. France, Belgium, Russia and Germany, four of the great horse-producing countries, have lost a heavy percentage of their horse stock during the war. Already a shipment of Percherons has gone from Western Canada to France, and it would seem that during the period of reconstruction our horse market will be East and West. If it will pay to breed any horse on the Canadian farm the heavy draft of good quality should turn in most money to his owner.

Garment's Turn New

"Diamond Dyes" Make Old Apparel Fresh and Stylish

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether it be wool, silk, linen, cotton or mixed goods, - dresses, blouses, stockings, skirts, children's coats, feathers, draperies, coverings. The Direction Book with each package tells so plainly how to diamond dye over any color that you can not make a mistake. To match any material, have druggist show you "Diamond Dye" Color Card.

BRITISH RELEASE

GERMAN ADMIRAL

London, Jan. 25. - Admiral Von Reuter, the chief officer of the German fleet, a Sempa Flow, who gave the order for the scuttling of the German fleet there last June, has been set free by the British authorities. The admiral has returned to Germany, it was announced today.

SAGE TEA BANDY

TO DARKEN HAIR

It's Grandmother's Recipe to Bring Back Color and Lustre to Hair

You can turn gray, faded hair beautifully dark and lustrous almost every night if you'll get a bottle of "Wyeth's Sage and Sulphur Compound" at any drug store. Millions of bottles of this old famous Sage Tea Recipe, improved by the addition of other ingredients, are sold annually, says a well-known druggist here, because it darkens the hair so naturally and evenly that no one can tell it has been applied.

Those whose hair is turning gray or becoming faded have a surprise awaiting them, because after one or two applications the gray hair vanishes and your locks become luxuriantly dark and beautiful.

This is the age of youth. Gray-haired unattractive folks aren't wanted around so get busy with Wyeth's Sage and Sulphur Compound tonight and you'll be delighted with your dark, handsome hair and your youthful appearance within a few days.

MISS UNA CARPENTER

Miss Una Carpenter, who plays the Hawaiian dancing girl in "A Night in Honolulu," which comes to the Grand Opera House next Monday, February 2nd, is a young woman who has made her way on the stage by careful study. Players are often asked about how to get on the stage, and how to succeed after they have managed to secure an engagement. It seems a question which is always being asked by folks outside the theatre. The inevitable question was put to Miss Carpenter, and the interviewer found the young lady had very definite and set ideas on the subject of her profession. The only and practicable way for one ambitious to learn the ways of the stage is to "act" said Miss Carpenter. The various schools of acting may be well enough in their way, but my observations of their graduates has been that they are harder to fit into a role than a person who has had no training at all. The stock company is the best school which can be found in the country today, while there is little chance for study and characterization, still it does give the student the opportunity to study, and see the result certain intonations and gestures have on audiences. Getting to know the temper of an audience proved my greatest difficulty. Finding our audience and forcing response upon it is one of the great secrets of winning success.

A thrilling mystery narrative entwined with an embracing love story of old Hawaii - the Island Paradise - is "A Night in Honolulu," by Howard McKent Barnes. From the opening scene to the end of the play the spectator feels that he is really living among these fascinating natives, sharing with them the sorrows and joys of their picturesque life. The author has reproduced these quaint people and their manner in an atmosphere that is most realistic.

DR. J. G. SUTHERLAND After three years overseas has returned to practice in diseases of the eye, ear, nose and throat and prescribing of glasses. Office hours 9 to 11 a.m., 1:30 to 4 p.m. and 7 to 8 p.m. Tuesdays 7 to 8 p.m. Sundays

SEARCHING FOR LIQUOR

Prohibition Commissioner, in New York Begins Campaign

NEW YORK, Jan. 25. - Search for illicit-liquor stills in New York city began in earnest today. Squads of trained recruit agents, herded by a dozen veterans, left the Customhouse at an early hour to spread out over the various zones into which the city has been divided.

Flying squadrons, equipped with fast automobiles, were held in readiness to pounce upon any place suspected of housing secret stores of the forbidden fluids.

Prohibition Commissioner Kramer mapped out the campaign with Federal and city authorities yesterday.
