

cherries above mentioned, besides it is a profitable fruit to grow for market. One difficulty attends it wherever grown, and that is its susceptibility to black knot.

FIG. 814.—WRAGG CHERRY.

There is also a large fruited Montmorency offered for sale, which seems to be larger and later than Early Richmond. The accompanying photograph of a branch from a young tree at Maplehurst, three years planted, will show the fruiting habit of this very promising variety.
