THE publishers of this work, grateful for the immense patronage it has received, now present to the public a new edition, which has been thoroughly revised. During the past ten years, great changes have occurred upon the earth's surface. By the enterprise of individuals, either from motives of curiosity, or for the purposes of commerce, and by the efforts of enlightened governments, the most distant parts of the world have been explored and laid open to view, and their natural productions, climate and soil, made known. The manners and customs of savage nations have become well understood; and the boundaries and extent of the various portions of land and water which compose the face of the earth, have been accurately defined. It has become necessary, therefore, to make some changes in the book, that it may conform to the improved state of geographical science, but the outline and general plan of the work remain the same, so that teachers will still find it familiar, and the author has taken scrupulous care to have the facts agree with the best authorities, and to make it correct in all particulars. The *Atlas* has been entirely redrawn by Mr. Smith, an eminent geographer in New York, and newly engraved in the best manner on steel. Several important divisions of the world are given upon an enlarged scale; the United States have been more conveniently classified so as to present each state entire. Maps of the West Indies, New Brunswick and Nova Scotia, the British Isles, Central Europe, Michigan, and the newly settled portions of our own country, have, among others, been *added*, making it more full than any other School Atlas; and the whole has been done without regard to expense. The utmost care has been taken to make the *Atlas progressive and clear*, so that it shall lend on the minds of young persons without confusion; by means of appropriate symbols and numerals, the extent of the various countries in square miles; the Population, Government, Religion, and the State of Society, are exhibited on the different maps; and on the Map of the World, the animals peculiar to any portion of the earth's surface. It is confidently believed, that it will be found to surpass every other School Atlas hitherto published. The price of the work is low, and every thing which experience and care could do, has been done to merit the continued confidence of the great body of teachers who have always preferred it for its simplicity and adaptation to the school room, and to recommend it to the favor of all persons who desire to promote good education.

Entered according to Act of Congress, in the year 1844, by D.
F. Robinson, in the Clerk's Office of the District Court of Con-
necticut.
