

Average age at death (of the deaths during the year.)

Males.....	48	years,	0	months,	11	days.
Females.....	48	"	6	"	27	"
Both sexes.....	48	"	3	"	19	"

The usual remarks as to age still apply; it is during the period from thirty to fifty years that madness predominates and frequently assumes the most serious forms.

The increase of the rate of mortality at that period of life results from the above two causes, which, this year, carried off fifteen patients.

The deaths amongst our inmates from sixty to eighty years of age have been much more numerous than last year.
