"THE PRODUCTION OF COMB HONEY."

Alth PRODUCTION OF OURD HUMAL. The "Introduction" gives a concise sketch of the plains experience in producing comb honey, and ex-chapter, "Securing Workers for the Havvest," scis forth he advantages of cellar-wintering combined with spring the one given in decide from food in abundance, warmth is ing." Free thing needed to promete safe, early breed-siver, in chapter and best method of securing this is ames his favorite surplus case, and gives reasons for the The angle in detail. Under the head of "Supers in a supers his favorite surplus case, and gives teasons for the preference preference.

The next topic is that of "Separators." Their advan-ses and all provide the separators of the separator set of the separator set of the set o The next topic is that of "Separators." Their advan-tages and disadvantages; the conditions under which they ment are needed and the methods necessary to their a bandon-the Rood and Bad qualities of the different kinds mentioned ; having for putting them on given and the advartages of fully explained.

The next three pages are devoted to "Tiering-Up," in which the state three pages are devoted to "beckeeper" which next three pages are devoted to "Tiering-Op, ... ed, the operations of this system are explicitly describ-to, showing the social which it enables a beckeeper which the operations of this system are explicitly describ-to showing entrations of this system are explicitly describ-to handle a "honey-in-wer." Then tollow: "Hiving ftably on empty combs;" in which the question of pro-broad, dispensing with full sheets of foundation in the and thorough instructions given for its accomplishment.

brodd west when hiving swaims is made perfectly clear, and these when hiving swaims is made perfectly clear, "The Building of Drone-comb. --This appears to have with the great stunbling-block in the road to success unject. Why bees build it, is well considered, and the pages are used in answering the question. "What shall be used in the sections?" That is, when shall foundation be under the combs. Under the head of "Secretion and way been to way," attention is called to the fact tha. we way set combs. "Under the head of "Secretion and way been iosing a big thing by not utilizing the nataral mages the combs." Intervent and suggestions "The Combust" "When the fact tha we have been losing a big thing by not utilizing the nataral "The Combust" "The tracet of criticism," and

The Conclusion reques's "the freest of criticism," and The Conclusion reques's "the freest of criticism," and late a scale at first. Frice of Book post-paid, 25 cents. Canadian customers book.

MYERS 1887 CIRCULAR OF SUPPLIES BEE-KEEPERS

BEES, QUEENS, FOUNDATIONS, &c..

BLES, QUEENS, FOUNDATIONS, &c., Free to all. We would call special attention to Smokers as manufactured by us, we guarantee every one. The barrel is made of iron, the nozzel is tin and so arran ed that embers cannot be blown among the bees, the sliding door at the rear of the barrel together with the strip of sandpaper on the bellows, enables us to light the smoker almost instantly with a match. The bellows is so con-structed that fire cannot get into it, the spring is on the outside and can very easily be replaced if broken without injuring the bellows. We also manufacture the "Clark cold blast smoker" the same as made by A. I. Root, of Medina, Ohic. Price of smoker with jinch barrel \$r.co, 29 barrel 75 cents Clarks cold blast 50 cents, by mail each so cents extra. For wholesale rates send for Illustrated Catalogue to Catalogue to
