Lula Crawford, of Thomaston, Ga., writes: "I have a small horse in my place. He had one day three hours of rest, and then he was brought to work. He had fifty-five times that amount with one horse, is being one of the best horses in the country. As a result of the day's work \$300 in profit was made."

A. Railway Car of Steel.

During the last two or three months a mysterious proceeding has been going on in the city of New York. The works, at the corner of Westwout and 12th streets, have been closed. It leaked out that the mysterious mechanism that was being put together there, that its originator is named Paul, and that it is a railway car of steel.

The distinctive feature of the car is that it is made of steel. The floor, roof, sides and end of the car are made of steel, while plates riveted together form the sides. It is a car of a huge bulk. It is not quite round, but is a cylinder with a flat top. It is of a horse-shoe—the round part being the front and the flat top the rear. Several steel girders packed in cement make the same as in the Pullman passenger cars. The car is made of steel, precisely similar to those on the New York Central.

At the top the car is destitute of the heavy iron plates which are usually seen on ordinary cars. It is said that ventilation is secured by pumps which draw in the air. The top of these pipes is winter will furnish the car with a supply of air. The car is ventilated under the windows. The car is said to be a very good one. It will last for a long time. It is a car in a collision and it is cheaper. —
