

A Colliery at Wembley.

(From a Correspondent)
NOVEL COAL MINING EXHIBIT.

A full sized colliery, complete with headgear, pit ponies, underground stables, washeries, and all the most up-to-date paraphernalia of coal-mining, seen in actual operation, is to be one of the many sensations of the British Empire Exhibition at Wembley next year.

A veritable wonder city is rapidly rising from the chaos of concrete, building material and giant cranes. Nothing is being omitted to make the exhibition worthy of its great object—the exposition of the British Empire's wealth in natural resources and human enterprise in every industrial field.

Coal mining, the mainspring of our national wealth, requires to be represented in some special manner consistent with its importance, and the sinking and construction of this working colliery has been the final decision. The idea originated in the Mining Association of Great Britain, the coal owners' organization, which granted the money necessary for the purpose. The cost of plant and construction was estimated at £100,000, but the sum was readily voted. It was felt that so comprehensive an undertaking as the British Empire Exhibition would not be complete without some idea being given of the

problems with which the coal mining industry has to deal, and of the enormous progress that has been made in technique since the early days. The Mining Association invited the co-operation of the Institution of Mining Engineers and of the Miners Federation of Great Britain in working out the scheme. A joint committee of representatives of the three bodies has been engaged on this work for some time, and plans are now prepared for the commencement of the operations of sinking the shafts, excavating the underground galleries, and installing the elaborate and costly surface plant which is an essential part of the equipment of every colliery.

One of the principal features of the mine will be an electric winding system which will be able to lower into the workings 2,000 people an hour. Over the top of the shaft, which will be 18 feet in diameter, will be erected a steel headgear 30 feet high. The headgear will be equipped with pulleys fifteen feet in diameter, and will be of lattice work construction.

Next to the winding engine house will be a lamp room containing electric and oil lamps. Adjacent to this will be offices, bath-rooms for miners, a motor-ambulance house, workshops, and electrically driven air compressors. An electrically driven fan will be seen in operation, ventilating the labyrinth of underground tunnels that extend about a quarter of a mile.

After inspecting the surface plant, visitors will be lowered into a two-decked cage to the shaft bottom, and will step into an actual underground workings. The cage by which the public will be taken underground will be an actual reproduction of a colliery cage which lowers and raises the miners daily, and hoists coal to the surface.

The first machinery that will catch the eye underground will be an electrically driven pump busily at work pumping water. Different methods of supporting the ground overhead will be shown, including the use of steel as a main support. Next will be seen a haulage engine which hauls the coal from the workings, which in many collieries are over a mile away from the bottom of the shaft. The public will see the pit ponies in their underground stables where their lives are spent. The manner in which they are cared for will be explained.

Penetrating farther into the mine, the explorers will observe the various methods of getting coal, first by colliers with the pick and secondly by electrical and compressed air mechanical cutters. Mechanical conveyors will be seen moving the coal to pit trams in which it is hauled to the bottom of the shaft, ready for hoisting. Another interesting underground department will be the fully equipped ambulance room where first aid is rendered in case of accident.

After leaving the workings, visitors, having regained the surface, will pass into a large hall, where they will see the progress that has been made in the mining industry during the past fifty years. The primitive tools used by miners will be on view together with the early lamps carried by the miners, and the more elaborate safety lamps of to-day. The visit to the Wembley Colliery will conclude with a cinema entertainment showing miners actually at work underground.

The purpose of the exhibit is to give the general public a glimpse into the highly technical and complicated business of coal mining. It should prove one of the strongest attractions of the whole Exhibition.

Afternoon Teas at the Blue Puttee. On rainy or chilly afternoons nothing so good as "the cup that cheers but not inebriates" at the Blue Puttee. Tea, Coffee or Chocolate served in the most appetizing manner with sandwiches and cake such as you can get at the Blue Puttee only. Large or small parties accommodated. Large parties should telephone 1016 to make arrangements.—sept10,11

Dramas of Modern Smuggling.

The drama which occurred recently on the schooner Mary Beatrice, off Sandy Hook, throws a vivid light on the growing traffic of smuggling undesirable aliens who would never be admitted by immigration officials in the ordinary way.

The Mary Beatrice sailed from the Bahamas with a cargo of twenty Chinese, whom the captain had agreed to smuggle into the United States. In return for this service the captain was to receive £100 from each man—£20 down, and the remainder at the end of the voyage.

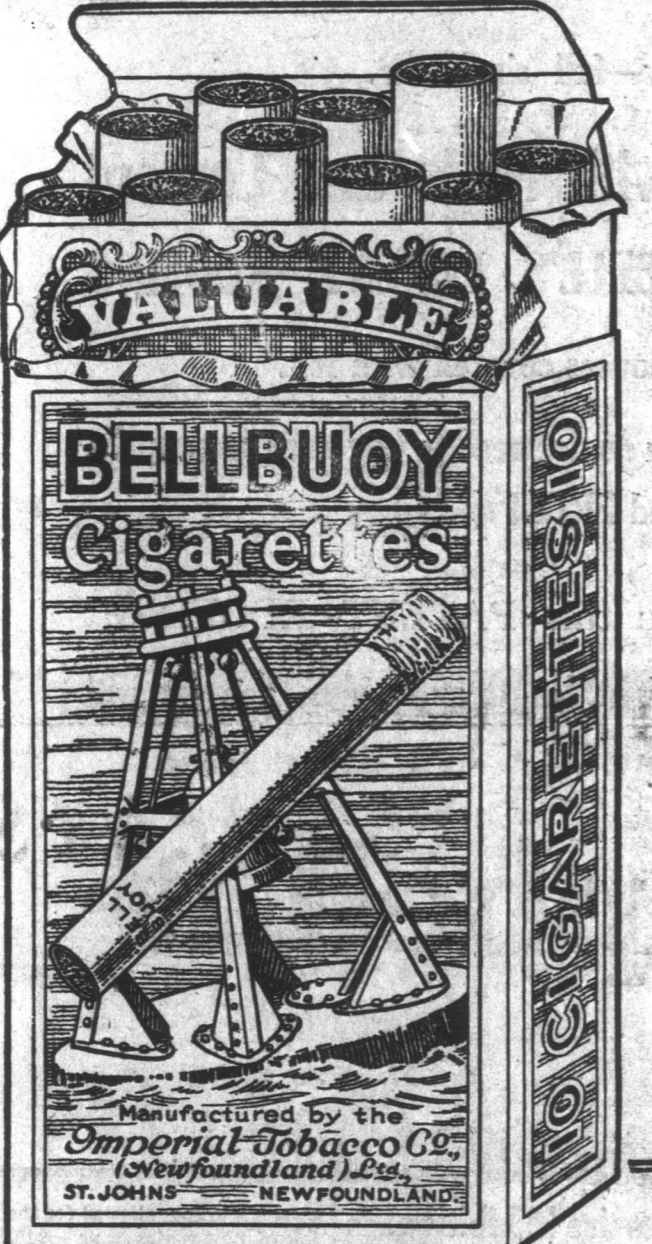

On arriving off the American coast the captain lost his nerve, and instead of putting the Chinese ashore in small boats he deserted the ship with his share of the booty. The crew of four, maddened by drink, then demanded their money from the Chinese. A furious battle ensued, in which nine were killed.

Human Contraband.
Fortunes are being made just now in smuggling such unwanted immigrants. The traffic is controlled by powerful people, who have a swarm of agents in every country. These agents are to be found even among ships' crews, and they arrange for the concealment and passage of the human contraband.

In British Columbia, whence Chinese are rigidly excluded, a huge business is done, and each Chinese smuggled into the country is worth many pounds to the agent who has arranged his entry.

The Chinese are by no means the only nationality concerned in the trade. Not long ago a plot was discovered on the Clyde for smuggling unemployed men from this country to the United States.

No fewer than sixteen men were found hidden away on a liner just before her departure for New York. Each had paid five pounds to the smuggling agents, who had arranged with members of the crew for their secret passage. A regular traffic in illegal passages was found to have existed for a long time.

Have YOU stopped to think?

Not one cigarette smoker in a thousand stops to think of what is involved in the making of a good cigarette—

Only expert knowledge of the tobacco leaf from the time it is grown, picked, cured and blended, can produce cigarettes to please the delicate taste of cigarette users—

BELLBUOY Cigarettes

are made by experts who are familiar with every detail that goes toward the making of a good Cigarette.

They're delightfully different.

GOVERNMENT AS USUAL.

Our President, so good and wise, worn out by heavy labor dies. The people mourn, the flags ascend; they've lost a brother and a friend. But government goes on as though there were no sabbie plumes of woe.

Upon a bleak New England farm a rugged toiler lifts his arm and takes the presidential vow; to rule a realm he leaves the plow. 'Twould be a cataclysmic thing if we were governed by a king, to have one monarch leave his throne, succeeded by a prince unknown. But here the people have in hand dominion over all the land, and forward goes the nation's car, without a jolt, without a jar, though statesmen put their tools aside, and lay them down at evenfalls. The great and good man laid to rest would say that this is for the best. Perhaps it's hard for us to know there'll be small ripples when we go. It's natural for us to hope that when we've crossed the sunset slope, begarlanded with shining fame, the world will not be quite the same. Our government is founded well; the tolling of the iron bell that tells the passing of the great, disturbs no function of the state. A printer leaves the guiding helm; a farmer comes to rule the realm.

Grace: "Oh, Mr. Noocyte! How lovely of you to bring me these beautiful flowers! How sweet they are, and how fresh! I do believe there is a little dew on them yet!"
Noocyte: "Well, yes, there is; but I'll pay it to-morrow."

NEWARD'S LINIMENT FOR FALLING OUT OF HAIR.

Prophy-lactic Tooth Brush

LOOK at your tooth brush. If the bristles are even across the top, place them against your teeth and look in the mirror. See how they bridge over the spaces between the teeth and how they just clean the smooth outside surfaces.

Now look at the Prophy-lactic Tooth Brush. The tufted bristles get between the teeth, and the curved handle makes it easy to reach every part of every tooth.

Regular brushing with this brush and four visits a year to your dentist will insure good, sound, attractive teeth for a lifetime.

Prophy-lactic Tooth Brushes come in three sizes—adults', youths', and children's; and in three degrees of stiffness—hard, medium, and soft.

Look for the name Prophy-lactic on the handle. Always sold in the yellow box.

THE SHOE MEN

Fads and Fashions.

The bellless gowns of tube-like dimensions are particularly becoming to the women with small hips. The wide brim of a restaurant hat has slashed all around to allow a matching silk veil to drop.

Some of the dress coats follow the tubelike silhouette, while others feature a dounce below the knee. A long, tight-fitting sleeve with a cuff, or softening full at the wrist, will be smart for the twill dress.

The bouffant evening dress will probably stay quite long, as its length is necessary for the desired effect. Brown-thread lace drapes the crown of a small hat of brown panne velvet and ties in a bow at the side. Charming worn with a tan dress of kasha cloth is a cloche of cocoa panne velvet trimmed with a topaz pin.

Some furs that are used on the dress coats are mole, beaver, squirrel, caracul, Japaneseitch, fox and gazelle.

Fur trimming and embroidery in wool and chenille, brightened with metal threads, are used on the costume suits. Applique stitching in colors is used on the crown of a black velvet poke bonnet trimmed with black moire ribbon.

Plaid and striped materials are favored for the sports coats which are collared with red fox, beaver, raccoon and opossum.

For general wear there is nothing more desirable than a fur-collared sports coat of English plaid or striped worsted.

The return to fashion of the collar is welcomed by the woman who finds a touch of white at the throat and neck so becoming.

Rippling diagonally across the front and down the side of a coat dress of dark blue twill is a crepe of beige crepe de chine.
