

implementation of technology actions for mitigation or adaptation objectives. Finally, in the forests and agriculture sector Environment Canada has supported initiatives in Chile and Guatemala, for example, to help restore degraded soils, and strengthen local capacities in forest management.

iii) TECHNICAL COOPERATION AND CAPACITY BUILDING WITH DEVELOPING COUNTRIES

Environment Canada engages in technical cooperation and capacity building with various developing countries on environmental issues that directly affect the environment and well-being of developing country citizens. This included support for international training events and capacity building initiatives on key environmental issues, including bilateral capacity-building workshops with Chile on addressing invasive species and migratory birds. Environment Canada, through the Canadian Wildlife Service, also provided support to countries throughout South America to provide capacity development to enable the long-term monitoring and conservation of waterbirds through the Neotropical Waterbird Census.
