

B. B. B. C CANCEROUS DISEASES

Removes **U**
IMPURI- **R**
TIES **E**
and **S**

There can be little doubt at the present day that Cancer is curable when correctly treated. Frequently a sore is neglected until by constant irritation it assumes a cancerous appearance. If taken in time the majority of these could be readily cured; while in the later stages they become difficult if not impossible to cure. Now, while we do not put forward Burdock Blood Bitters as a cure for Cancer, we know of several cases, pronounced to be true cancer by reliable physicians, which were absolutely cured by B. B. B., and we have evidence of numerous cases where its effects have been remarkably beneficial. If space permitted we could present many testimonials but content ourselves with one or two. We will, however, furnish information and further testimony to all applicants free of charge. Cancer is a blood disease, and it is not unreasonable that such a powerful alterative blood purifier as B. B. B. should act successfully on it.

A Good Result.

GENTLEMEN,—I have used fourteen bottles of B. B. B. and have received a benefit from it. I have a cancer, and although it has not yet cured it, I am quite sure it retards its progress.

MRS. DAVID TITE,
Brookbury, Que.

True Cancer Cured.

DEAR SIRS,—Last summer my wife was ailing with a sore breast which looked and acted like a cancer, and as my mother died from this terrible disease, we became alarmed and called in our family doctor who pronounced it cancer, but did not tell my wife that this was the case. He told me I had better send her to Montreal at once, and I supposed she would need to have an operation performed. About this time she was looking over an old Burdock Blood Bitters Almanac, when she saw B. B. B. was recommended to cure cancers. She at once commenced using it internally and externally, according to directions, and strange to say in less than two months it had all disappeared. I reported it to the doctor and he said it was very strange, as he felt quite satisfied that if twenty doctors had seen it they would all have pronounced it a cancer. As this is the first medicine we have ever known to cure cancers, I think it is only fair to suffering humanity to report this case, hoping others suffering as my wife did may be induced to try it.

I am, yours very truly,

GEO. V. THOMAS,
Hull, P. Q.
