Calendar, Aspects, &c.

10th Sunday after Trinity.

Month begins comparatively cool, but after Tuesday the heat in creases and for a week continues hot. Some clouds, winds and a severe thunder storm.

10th Sunday after Trinity.

Coal evenings but very warm day. Showers have fallen and the heat has abated very pleasant day so it is down to this night.

12th Sunday after Trinity.

This week will prove warm, sultry and oppressive, but the cool evenings are a great relief. Some thunder and great fear of more.

13th Sunday after Trinity.

A very fine day. St. Bartholomew. No rains for the remainder of this week, unless the wind suddenly changes to East or North East.

14th Sunday after Trinity.

Cool for the season, but rising thermometer.

The Danville School Slates are superior to any now in use.

AUGUST.—On the subject of profit arising from the proper treatment of milch cows, let it be remembered, that the average value of milk in town and country is six cents a quart. Suppose a cow to give three gallons a day, that would bring 72 cents, or nearly 22 dollars per month, as the value of her product. What other animal will make such generous returns for food, care, and generous feeding. Sound policy, therefore, demands cleanliness, good food, and proper shelter. Besides, every farmer knows, or ought to know, that the quality and quantity of manure which the farm requires depends on attention to the matter on which we have here written. An Englishman says, the more we feed the more we can produce, but he certainly means we should do the feeding on our own land or premises, and not on the king's highway. That is absolute folly and loss.
