No more blind hurses - For Specific Ophthalmia, Moon Blindness and other some over Range of the fewn have sure over

A farmer who engaged a man for field work, took him to a field and told him to commence plowing. "Start here," he said, "and go or right up to that brindled cow." Then he departed. Some hours afterwards he returned to the field to find that the fellow had plowed a rambling furrow all over the land. The farmer demanded the meaning of the extraordinary r sult of the man's labor. "Why," said the new hand, "you told me to plow to the brindled cow, and I've been doing so all the morning, but I can't catch up to her-she's all over the

QUESTIONS AND ANSWERS. Veterinary.

PREGNANT MARE HAS WHITES.

A driving mare, sixteen years old, in foal, is troubled with whites. A. R. Ans.-It is not advisable to give any more drugs than absolutely necessary during pregnancy. Feed good, nourishing food, and keep her in the best state of health possible, and after she has foaled would advise treatment, if neces-

DOG WITH WORMS.

Hound, fourteen months old, passes white worms about half an inch long, and he is very thin. F. J. G.

Ans.—Fast him for 12 hours, then give 20 grains kaloma. Repeat treatment, if necessary, in a week. If you cannot get kaloma, give 1 dram areca nut instead.

#### ABNORMAL GROWTH FROM WOUND.

Horse had the anterior aspect of the hock torn by barbed wire four years ago. A growth about an inch thick, and resembling the warts on his legs, has appeared at seat of wound. H. C! C.

Ans.—Growths of this kind are very hard to remove, but this can be greatly reduced if carefully and patiently treated. Pare the growth off with a sharp knife until you reach the sensitive parts, which will be indicated by the appearance of a little blood. Then apply butter of antimony once daily with a feather. When a dry surface forms, pick or pare it off. Keep this treatment up, and you will at least be able to reduce the enlargement, but there always will be a scar, as you cannot cause the growth of hair. V.

#### AFTER-EFFECT OF MILK FEVER.

Have a cow that took milk fever in about twenty-four hours after calving. We got a bicycle pump and milking tube, and, after hunting up an old Farmer's Advocate, treated her as described, and in thirty-two hours she was on her feet again. She has not come to the milk in three teats yet; gives only about a teacupful in the three, while there is the usual amount in the other one. The teats appear perfectly natural, and milk comes easily, only not enough. (an anything be done for her now, and, if not, is there a probability that she will come all right mext time of freshening? month since she calved. SUBSCRIBER.

Ans.-While your treatment with a bicycle pump seems to have saved your cow, I think you would have been ahead if you had used pure oxygen. Such re sults as you describe do not follow the use of oxygen properly administered. You cannot do much, except feed good food, and depend on nature to help you Better prepare her for the butcher, as it is not likely she will recover the use of the quarters that have failed. R.

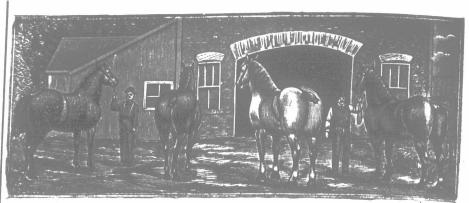

#### LAME HORSES.

1. Driving horse goes all right when first taken out, and will road sound for a variable distance, sometimes for ten miles, and then go quite lame, and get worse the further he is driven. The trouble is in the left fore leg.

2. Horse is lame in both legs, some times in one and sometimes in other. He may start out lame in one, and after a while go lame in both legs. K. C.

Ans.-1. The symptoms indicate carpitis (inflammation of the knee). Give him rest, and blister the whole knee joint with 2 drams biniodide of mercury mixed with 1 ounce vaseline. Clip the hair off tie so that he cannot bite the part; rub well with the blister daily for two days and the third day wash off, and apply sweet oil. Let him loose in a box stall now, and oil every day. As soon as the scale comes off, tie up and blister again. Repeat the blister, if necessary, in four weeks, and again, if the lameness is not

2. These symptoms indicate navicular disease, which is very hard to cure. Gave long rest, and blister all around the coronet repeatedly in the same manner as described in answer to question 1.

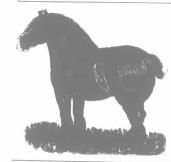

## PERCHERON

Also Shires, Hackneys and Clydes and 12 Percheron Mares (3, 2 and 1 year old) have just arrived with our new importation from Scotland, England and France, of high-class stallions and mares. Many of them prizewinners in their native lands. Bred by the best breeders. Percherons, blacks and grays, weighing 1,600 to 2,000 pounds. Shires at two years old weighing 1,700 pounds. Clydes, bays and blacks. 4 and 5 years old, weighing 1 800 to 2,000 pounds, bred by the best in Scotland. Our Hackneys are bays and chestnuts, combining size, quality and breeding that cannot be beaten. These horses can be seen at Toronto and London fairs, and all for sale at reasonable prices.
