

# Saving 57 Seconds Every Minute

That's what this model 110 Waugh Drill Steel Punching Machine does, punching holes in hollow steel, when it is substituted for hand work.

It means more time for the blacksmith, more steel for the mine, less trouble, less expense, and better, straighter holes—always.

Bigger mines, demanding better blacksmithing, equip their shops with this machine.

Eventually you will equip yours with it.

Write for our bulletin, No. 10-V-H. It will interest you.
