THE MEAT SUGAR INDUSTRY IN QUEBEC.

The best root industry in the Eastern Townships of Quebec appears to have taken a new lease of life, thanks to Government aid. At a gathering on its premises in Barriereville last Saturday, Mr. Mury, the manager traced the many disasters this factory had undergone. He reminded his hearers that the present factory was erected in 1880, and opened in 1881, but did not pay, and was closed until 1883, when it was reopened. Again, not paying, it was closed. The industry was restored in 1888, but once more failure attended it, and only last year when Lefebvre & Co. took hold of it, was it reopened and made successful. The premises, he said, occupy seven acres of ground, the factory itself covering four acres. The employees received about \$120 a day in wages, and \$1,000 per day was paid for beet. The coal bill amounted to \$100 a day, and another \$100 a day was expended in oil, grease, lighting, etc. The sugar manufactured was sold at from 3 1/2 to 4 1/2 a pound at the factory, but he thought that next year they would be able to sell it at 5 to 5 1/2. He said that they now had considerably improved the machinery. The annual expenditure in connection with the factory was about \$30,000, and \$40,000. After so many vicissitudes, it is to be hoped that this industry may have reached something like firm ground.

A UNIQUE WEDDING.

All the old residents of Montague Co., Tex., remember Uncle Henry Harris, the preacher-ferryman of Red River, during the latter part of the '80s. There have been many greater men in that part of the state, and many more intellectual ones, but there have been few who were so universally loved, or who were so widely mourned after their death.

Uncle Henry was a one-legged man, and the wooden stump which supplied the place of his missing member was a very primitive affair. It was joined to the stump of his leg by a single strap, which could be removed in a very few moments.

Calvin Dubbs, a half-breed Choctaw Indian, courted his daughter, May Harris. Uncle Henry was opposed to the suit of Dubbs because of his ungainliness and bad character. His daughter did not share in these objections.

One afternoon Calvin Dubbs rode up to the ferry and, as the river was high, asked to be ferried over. The old man and Dubbs started to take him across, but no sooner had they reached the middle of the river than their passenger whipped out a bowie knife, and in a very few passes severed the longer of the two ropes that bound them to the trolly. The boat immediately swung around in the current and remained stationary in mid-river.

"What's that for?" cried Uncle Henry in alarm. "Don't you know we can't get across now?"

"Don't know about you. I kin make it all right myself."

Calvin sprang to the saddle, urged his pony over the side of the boat into the water and struck out for shore. The two captives on the boat passed on helplessly until he gained the shore they had just left. As he did so May came out of the cabin, arrayed in her Sunday best, and two men on horseback rode out from their concealment back of the bluff. The object of the stratagem gradually dawned on the old man's mind.

"There's goin' to be a wedding!" yelled Calvin from the bank. "We'll let you attend as a witness."

"What's your license?" shrieked the father, and "what's your preacher?"

"Here's the license," yelled Dubbs waving a legal-looking document. "Can you read it from there? And this man here's the preacher."

The couple took their places, and the alleged preacher began the ceremony. Uncle Henry began pleading and expostulating, but all in vain. Suddenly he grabbed the Winchester he always carried in the bottom of his boat, and drew a bead on his prospective son-in-law.

"Stop that tom-foolishness, or I'll shoot!" yelled Calvin. "Go on, parson!" This latter remark was addressed to the preacher on shore. Whatever might be said against Calvin's morals, nobody ever doubted his nerve.

"Crack!" sounded the Winchester from the boat, and with a thud the bullet tumbled itself in the horn of the bridegroom's saddle. Calvin made a quick motion toward his own gun, but May caught his arm.

"Don't!" she cried. "Pa ain't goin' to hurt you. If he'd wanted to, he'd bored you the first crack."

The ceremony was a brief one, but every few moments Uncle Henry would blaze away just as one couple to the bridegroom to be unpleasant. When it was all over the party rode away, with many tantalizing adieux to the captives on the boat. This was an unusual wedding. It was never customary, even in Texas, to have a wedding ceremony on a river bank, and the father of the bride, as a captive on a boat in midstream, fired desultory shots from his Winchester at the bridegroom. - St. Louis Globe-Democrat.

In chess Canada is easily first among countries shipping to the British market, as the record for the year ending April 30th last clearly shows:

Tons. Tons.

Canada..... 32,808 France..... 1,881

United States 31,820 New Zealand 2,839

Holland..... 13,619 Other countries 1,370

Stock is being liberally subscribed in Boston and Bangor to operate the Bonobee black granite quarries. Polishing works will be put up at St. Andrews and steam drills at the quarries.

## GENERAL.

The Canadian Fire Extinguisher Co. is being organized at Montreal, to make a patent chemical extinguisher. Capital proposed \$50,000.

Corner lots on Fleet street, Piondilly, and other desirable localities in London are worth \$100,000 a front foot.

A young French officer lately, on a wager, made his way on a bicycle to the top of the Pic du Midi in the Pyrenees, 9,840 feet high, and then down again.

A delegate to the recent convention of the American Forestry association declared that the United States consumes more firewood, builds more wooden houses and fences than any other nation.

A mathematician has computed the movements of a rider's feet while operating a bicycle, and has demonstrated that it requires less exertion to travel fifteen miles on a bicycle than to walk three miles.

Mr. Lindsay Johnson, after examining the eyes of 180 domestic cats, as well as those of all the accessible wild members of the family, concludes that the natural shape of the cat's pupil is circular, though under various degrees of light it assumes every shape, from the circle to a straight vertical line.

It is asserted that the species of fish known by the common name of herring are the most prolific of all the denizens of the ocean. According to figures deduced by the British Fish warden a single pair (could all their eggs escape harm) would become the parents of 100,000,000 children in three years, and in twenty years their progeny would be of a bulk equal to that of our world.

Karl Ulrich, a boy giant, is creating a sensation in Berlin. He was born at Gross-Mohnd, Kreis, Schwidnitz, on September 12, 1880. His father is a simple forester of rather small stature, while his mother and her other children are of ordinary size. The boy Karl was normal until his third year, when he began to grow unusually fat. He is now six feet one inch tall and weighs 200 pounds, and his hands and feet are gigantic.

A French doctor has just discovered why some fishermen catch cod and others do not. He found that on the northern side of high marine peaks the cod would not bite, while on the southern side they did. By attaching thermometers to fishing lines he further found that most fish were taken at a temperature between 45 and 50 degrees, and that at 45 degrees, with the depth of about 14 fathoms, the catch was best.

The United States entomological commission has shown that our forest trees are veritable hosts, where a multitude of insects board and lodge. The oak provides provision and a home for 300 species of insects and lodgings for 160 more. The elm makes full provision for the wants of 61 species and harbors 30 others. The pine bears the burden of supporting from its own vitality 150 species, while 20 more love its shady retreat.

Cast iron is extended the 5,500th part of its length for every ton of direct strain per square inch of its section; its elasticity is fully excited when extended the 1,000th part, and the limit of its elasticity is estimated to be found at the time when it is extended the 1,200th part of its length. The tensile strength of the strongest piece of cast iron ever tested was 45,970 pounds to the square inch.

A few years ago a portion of the pavement in Grosvenor road, London, was lifted out of its place in some mysterious way. Before the workmen were sent to replace it numerous toads had made their appearance in the cracks between the misplaced stone and its fellows.

Investigation proved that the stone, which was two feet one way by four the other, and weighed 212 pounds, had actually been lifted out of place by the relentless growing force of these soft, spongy fungi.

The principal reason that we feel objects that are cold, when brought in contact with the skin, quicker than those that are warm, is that the skin being a poor conductor of heat, absorbs heat slowly from an object of a higher temperature than itself; while other objects, which are cooler, and which in nearly every instance are better conductors of heat than the skin, absorb heat quite readily from the skin, and hence a sensation of cold is felt on them.

The Boston Herald says: "A college alumnus waxed indignant because the newspapers do not recognize the fact that football as played under the new rules this season is a comparatively harmless game. No doubt the rigors of the game have been modified somewhat, but it will have to be allowed that three broken collar-bones, one broken leg, one splintered rib, one twisted jaw, one set of teeth knocked out, one twisted leg, producing water on the knee, and three sprained ankles, which is the record at Harvard so far this season, indicates room for still further improvements."

Truro Board of Trade is endeavoring to secure the repeal of the legislation which makes Halifax permanently the place where the Provincial Exhibition meets. Truro expects to have a provincial exhibition or at the least a Central Fair next year.

## W. C. T. U. COLUMN.

Mrs. Mary A. Woodbridge.

Mary A. Brayton was born April 21, 1850, in the goodly old town of Nantucket. Her ancestry was all that could be desired, from the most critical New England standpoint. Her gentle, refined Quaker mother was a sister of Mitchell, the astronomer, whose own daughter, Maria Mitchell, became, in after years, so famous. Her father, Isaac Brayton, was a Nantucket sea captain until his genius for leadership and rare powers of eloquence so made themselves felt that his townpeople made him their representative in the Massachusetts legislature. In after years, upon his removal to Ohio he served in the State senate and was the father of the law governing charitable institutions for which that state is today celebrated. His Western home straightway became a rendezvous for such men as Joshua Giddings, Salmon P. Chase and Ben. Wade, while his interest in the underground railway system was both active and practical.

With these facts in mind it is not difficult to trace the beginnings of the reformer and leader, Mary A. Woodbridge, in the child, Mary A. Brayton. She came by rightful inheritance into the possession of her quick intellect, her insatiable love of books and learning, her well-rounded mind, and graceful, gracious dignity.
